

**4-Bit D Type Latch**

The TC74HC77A is a high speed CMOS 4-BIT D-TYPE LATCH fabricated with silicon gate C<sup>2</sup>MOS technology.

It achieves the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.

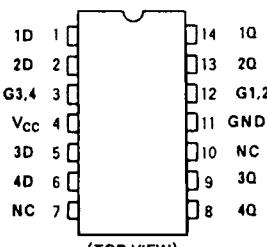

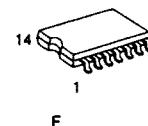

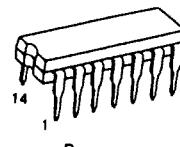

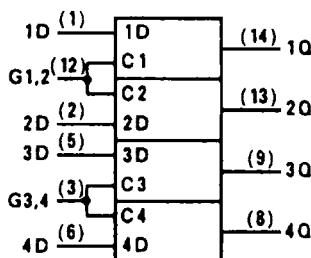

It contains two groups of 2-bit latches controlled by an enable input (G1,2 or G3,4) and these two group maybe used in different circuits.

The data applied to the data inputs are transferred to respective Q outputs when the enable input is held high. When the enable input is low, the outputs remain at the level at the time the enable goes low.

All inputs are equipped with protection circuits against static discharge or transient excess voltage.
