DM74ALS242C/DM74ALS243A Quad TRI-STATE® Bidirectional Bus Driver

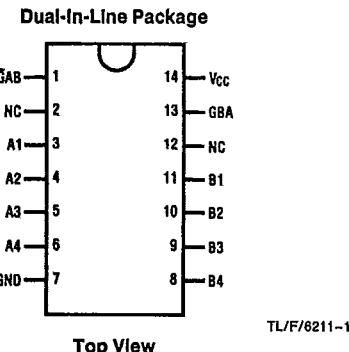

General Description

These octal TRI-STATE® bus drivers are designed to provide the designer with flexibility in implementing a bus interface with memory, microprocessor, or communication systems. The ALS242C has inverting buffers, while the ALS243A has non-inverting buffers. The direction enable gating is configured with separate control over either buffer direction and the two control buffers are complementary. Connecting these control inputs to one common line implements single line direction control, while individual control can put both buffer directions into TRI-STATE simultaneously (disabled state) or put both buffer directions into the active state (data latch state). The TRI-STATE circuitry contains a feature that maintains the buffer outputs in TRI-STATE (high impedance state) during power supply ramp-up or ramp-down. This eliminates bus glitching problems that arise during power-up and power-down.

Features

- Advanced low power oxide-isolated ion-implanted Schottky TTL process
- Functional and pin compatible with the 74LS counterpart
- Improved switching performance with less power dissipation compared with the 74LS counterpart
- Switching response specified into 500Ω and 50 pF load
- Switching response specifications guaranteed over full temperature and V_{CC} supply range
- PNP input design reduces input loading
- Low level drive current: 74ALS = 24 mA

Absolute Maximum Ratings

Supply Voltage, V _{CC}	7V	Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
Input Voltage Dedicated Inputs	7V	
I/O Ports	5.5V	
Operating Free Air Temperature Range DM74ALS	0 to +70°C	
Storage Temperature Range	-65°C to +150°C	
Typical θ_{JA} N Package	78.0°C/W	
M Package	111.5°C/W
