

# MM54HCT533/MM74HCT533 TRI-STATE® Octal D-Type Latch with Inverted Outputs

# MM54HCT534/MM74HCT534 TRI-STATE Octal D-Type Flip-Flop with Inverted Outputs

## General Description

The MM54HCT533/MM74HCT533 octal D-type latches and MM54HCT534/MM74HCT534 Octal D-type flip-flops utilize advanced silicon-gate CMOS technology which provides the inherent benefits of low power consumption and wide power supply range, but are LS-TTL input and output characteristic & pin-out compatible. The TRI-STATE outputs are capable of driving 15 LS-TTL loads. All inputs are protected from damage due to static discharge by internal diodes to  $V_{CC}$  and ground.

When the MM54HCT533/MM74HCT533 LATCH ENABLE input is high, the data present on the D inputs will appear inverted at the QBar outputs. When the LATCH ENABLE goes low, the inverted data will be retained at the QBar outputs until LATCH ENABLE returns high again. When a high logic level is applied to the OUTPUT CONTROL input, all outputs go to a high impedance state, regardless of what signals are present at the other inputs and the state of the storage elements.

The MM54HCT534/MM74HCT534 are positive edge triggered flip-flops. Data at the D inputs, meeting the setup and hold time requirements, are inverted and transferred to

the  $\bar{Q}$  outputs on positive going transitions of the CLOCK (CK) input. When a high logic level is applied to the OUTPUT CONTROL (OC) input, all outputs go to a high impedance state, regardless of what signals are present at the other inputs and the state of the storage elements.

MM54HCT/MM74HCT devices are intended to interface between TTL and NMOS components and standard CMOS devices. These parts are also plug-in replacements for LS-TTL devices and can be used to reduce power consumption in existing designs.

## Features

- TTL input characteristic compatible
- Typical propagation delay: 18 ns
- Low input current: 1  $\mu$ A maximum
- Low quiescent current: 80  $\mu$ A maximum
- Compatible with bus-oriented systems
- Output drive capability: 15 LS-TTL loads

## Truth Tables

'HCT533

| Output Control | Latch Enable G | Data | Output      |
|----------------|----------------|------|-------------|
| L              | H              | H    | L           |
| L              | H              | L    | H           |
| L              | L              | X    | $\bar{Q}_0$ |
| H              | X              | X    | Z           |

'HCT534

| Output Control | Clock      | Data | Output      |
|----------------|------------|------|-------------|
| L              | $\uparrow$ | H    | L           |
| L              | $\uparrow$ | L    | H           |
| L              | L          | X    | $\bar{Q}_0$ |
| H              | X          | X    | Z           |

H = High Level, L = Low Level

X = Don't Care

$\uparrow$  = Transition from low-to-high

Z = High impedance state

$\bar{Q}_0$  = The level of the output before steady state
