Octal Bus Buffer

TC74HCT245AP/AF/AFW 3-State, Non-Inverting
TC74HCT640AP/AF 3-State, Inverting

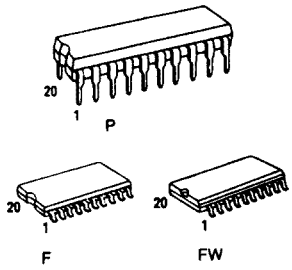
The TC74HCT245A and HCT640A are high speed CMOS OCTAL BUS TRANSCEIVERs fabricated with silicon gate C^2MOS technology.

They achieve the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.

They are intended for two-way asynchronous communication between data busses. The direction of data transmission is determined by the level of the DIR input.

The enable input ($\overline{G}$) can be used to disable the device so that the busses are effectively isolated.

All inputs are equipped with protection circuits against static discharge or transient excess voltage.



Features

- High Speed: t_{pd} = 10ns(Typ.) at V_{CC} = 5V
- Low Power Dissipation: I_{CC} = 4μA(Max.) at Ta = 25°C:
- Compatible with TTL outputs: V_{IL} = 0.8V(Max.)
  V_{IH} = 2.0(Min.)
- Wide Interfacing Ability: LSTTL, NMOS, CMOS
- Output Drive Capability: 15 LSTTL Loads
- Symmetrical Output Impedance: $|I_{OH}| = I_{OL}$ = 6mA(Min.)
- Balanced Propagation Delays: $t_{pLH} = t_{pHL}$
- Pin and Function Compatible with 74LS245, 640, 643

Application Notes

1) Do not apply a signal to any bus terminal when it is the output mode. Damage may result.
2) All floating (high impedance) bus terminals must have their input levels fixed by means of pull up or down resistors or bus terminator ICs such as the Toshiba TC40117BP.

Note (1) C_{PD} is defined as the value of the internal equivalent capacitance which is calculated from the operating current consumption without load. Average operating current can be obtained by the equation:
$I_{CC(opr)} = C_{PD} \bullet V_{CC} \bullet f_{IN} + I_{CC}/8$(per bit)
