

Rochester Electronics Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All recreations are done with the approval of the OCM.

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceed the OCM data sheet.

Quality Overview

- ISO-9001
- AS9120 certification
- Qualified Manufacturers List (QML) MIL-PRF-35835
 - Class Q Military
 - Class V Space Level
- Qualified Suppliers List of Distributors (QSLD)
 - Rochester is a critical supplier to DLA and meets all industry and DLA standards.

Rochester Electronics, LLC is committed to supplying products that satisfy customer expectations for quality and are equal to those originally supplied by industry manufacturers.

The original manufacturer's datasheet accompanying this document reflects the performance and specifications of the Rochester manufactured version of this device. Rochester Electronics guarantees the performance of its semiconductor products to the original OEM specifications. 'Typical' values are for reference purposes only. Certain minimum or maximum ratings may be based on product characterization, design, simulation, or sample testing.

Not Recommended for New Designs

This product was manufactured for Maxim by an outside wafer foundry using a process that is no longer available. It is not recommended for new designs. The data sheet remains available for existing users.

A Maxim replacement or an industry second-source may be available. Please see the QuickView data sheet for this part or contact technical support for assistance.

For further information, [contact Maxim's Applications Tech Support](#).

MAXIM

Low-Voltage Reference

ICL8069

General Description

The ICL8069 is a 1.2V temperature-compensated voltage reference. It uses the bandgap principle to achieve excellent stability and low noise at reverse currents down to 50µA. Maxim's ICL8069 also features excellent stability, freedom from oscillation.

Applications

- Analog-to-Digital Converters
- Digital-to-Analog Converters
- Threshold Detectors
- Voltage Regulators
- Portable Instruments

Typical Operating Circuit

Features

- ◆ Temperature Coefficient Guaranteed to 10ppm/°C max
- ◆ Low Bias Current: 50µA min
- ◆ Low Dynamic Impedance
- ◆ Low Reverse Voltage
- ◆ Low Cost

Ordering Information

PART	TEMP RANGE	PIN-PACKAGE	MAX TEMPCO (ppm/°C)
ICL8069BCSA	0°C to +70°C	8 SO	25
ICL8069CCSA	0°C to +70°C	8 SO	50
ICL8069DCSA	0°C to +70°C	8 SO	100
ICL8069DESA	-40°C to +85°C	8 SO	100
ICL8069CCZQ	0°C to +70°C	TO-92	50
ICL8069DCZQ	0°C to +70°C	TO-92	100

Ordering Information continued at end of data sheet.

Pin Configurations

Low-Voltage Reference

ABSOLUTE MAXIMUM RATINGS

Reverse Voltage(Note 1)
 Forward Current 10mA
 Reverse Current 10mA
 Power Dissipation Limited by Max Forward/Reverse Current
 Storage Temperature Range -65°C to +150°C

Operating Temperature Ranges
 ICL8069C 0°C to +70°C
 ICL8069E -40°C to +85°C
 ICL8069M -55°C to +125°C
 Lead Temperature (soldering, 10s) +300°C

Note 1: In normal use, the reverse voltage cannot exceed the reference voltage. However, when plugging units into a powered-up test fixture, an instantaneous voltage equal to the compliance of the test circuit will be seen. This should not exceed 20V.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

(T_A = +25°C, unless otherwise noted.) (Note 2)

PARAMETER	CONDITIONS		MIN	TYP	MAX	UNITS
Output Voltage	I _R = 500µA		1.20	1.23	1.25	V
Output Voltage Temperature Coefficient	I _R = 500µA, T _A = operating temperature range (Note 3)	ICL8069A			10	ppm/°C
		ICL8069B			25	
		ICL8069C			50	
		ICL8069D			100	
Output Voltage Change	50µA ≤ I _R ≤ 5mA			15	20	mV
Reverse Dynamic Impedance	I _R = 50µA, I _R = 500µA			1	2	Ω
				0.6	2	
Forward Voltage Drop	I _F = 500µA			0.7	1	V
RMS Noise Voltage	10Hz ≤ f ≤ 10kHz, I _R = 500µA			5		µV
Reverse Current Range			0.050		5	mA

Note 2: If circuit strays in excess of 200pF are anticipated, a 4.7µF shunt capacitor will ensure stability under all operating conditions.

Note 3: For military devices, measurements are made at +25°C, -55°C, and +125°C, while for commercial devices measurements are made at +25°C, 0°C, and +70°C. The units are then classified as a function of the worst-case TC. Sample tested to 0.1% AQL.

Low-Voltage Reference

Typical Operating Characteristics

($T_A = +25^\circ\text{C}$, unless otherwise noted.)
