

TYPES SN54AS850, SN54AS851, SN74AS850, SN74AS851 1 OF 16 DATA SELECTORS/MULTIPLEXERS WITH 3-STATE OUTPUTS

DECEMBER 1983

- 4-Line to 1-Line Data Selectors/Multiplexers That Can Select 1 of 16 Data Inputs.
Typical Applications:

Boolean Function Generators
Parallel-to-Serial Converters
Data Source Selectors

- Cascadable to n-Bits
- 3-State Bus Driver Outputs
- 'AS850 Offers Clocked Selects; 'AS851 Offers Enable-Controlled Selects
- Has a Master Output Control (\bar{G}) for Cascading and Individual Output Controls (\bar{G} , \bar{G} , \bar{G}) for Each Output
- Package Options Include both Plastic and Ceramic Carriers in Addition to Plastic and Ceramic DIPs
- Dependable Texas Instruments Quality and Reliability

description

These four-line to one-line data selectors/multiplexers provide full binary decoding to select one-of-sixteen data sources with complementary Y and W outputs. The 'AS850 has a clock-controlled select register allowing for a symmetrical presentation of the select inputs to the decoder while the 'AS851 has an enable-controlled select register allowing the user to select and hold one particular data line.

A buffered group of output controls (\bar{G} , \bar{G} , \bar{G}) can be used to place the two outputs in either a normal logic (high or low logic level) or a high-impedance state. In the high-impedance state the outputs neither load nor drive the bus lines significantly. The high-impedance state and increased drive provide the capability to drive the bus lines in a bus-organized system without the need for interface or pull-up components.

The output controls do not affect the internal operations of the data selector/multiplexer. New data can be up while the outputs are in the high-impedance state.

The SN54AS850 and SN54AS851 are characterized for operation over the full military temperature range from -55°C to 125°C . The SN74AS850 and SN74AS851 are characterized for operation from 0°C to 70°C .
