

1.5A Low Dropout Fast Response Positive Adjustable Regulator and Fixed  
1.8V, 2.5V, 2.85V and 3.3V

## Features

- Guaranteed Output Voltage Accuracy within 2%
- Fast Transient Response
- Guaranteed Dropout Voltage at Multiple Currents
- Load Regulation : 0.1% Typ.
- Line Regulation : 0.03% Typ.
- Low Dropout Voltage : 1.3V Typ. at  $I_{OUT} = 1.5A$
- Current Limit : 1.5A Min. at  $T_J = 125^\circ C$
- On-Chip Thermal Limiting : 150 °C Typ.
- Adjustable Output : 1.25~10.7V
- Standard 3-pin SOT-223, TO-252, TO-220 and TO-263 Power Packages
- Lead Free Available (RoHS Compliant)

## General Description

The APL1086 is a low dropout three-terminal adjustable regulators with 1.5A output current capability. In order to obtain lower dropout voltage and faster transient response, which is critical for low voltage applications, the APL1086 has been optimized.

The device is available in an adjustable version and fixed output voltages of 1.8V, 2.5V, 2.85V and 3.3V, the output available voltage range is from 1.25~10.7V with an input supply below 12V. Dropout voltage is guaranteed at a maximum of 1.45V at 1.5A.

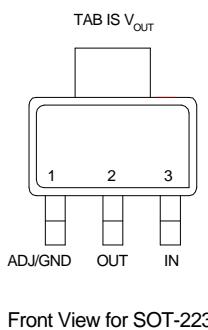

Current limit is trimmed to ensure specified output current and controlled short-circuit current. On-chip thermal limiting provides protection against any combination of overload that would create excessive junction temperatures.

The APL1086 is available in the industry standard 3-pin SOT-223, TO-252, TO-220 or TO-263 power packages.

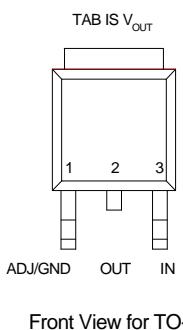

## Applications

- Active SCSI Terminators
- Low Voltage Logic Supplies
- Battery-Powered Circuitry
- Post Regulator for Switching Power Supply

Note: ANPEC lead-free products contain molding compounds/die attach materials and 100% matte tin plate termination finish; which are fully compliant with RoHS and compatible with both SnPb and lead-free soldering operations. ANPEC lead-free products meet or exceed the lead-free requirements of IPC/JEDEC J STD-020C for MSL classification at lead-free peak reflow temperature.

## Absolute Maximum Ratings

Symbol	Parameter	Rating	Unit
$V_I$	Input Voltage	15	V
$P_D$	Power Dissipation, $T_A=25^\circ\text{C}$ SOT-223 TO-252	1.7 2	W
$\theta_{JA}$	Thermal Resistance from Junction to Ambient in Free Air SOT-223 TO-252	60 50	°C/W
$T_J$	Operating Junction Temperature Range	0 to 150	°C
$T_{STG}$	Storage Temperature Range	-65 to +150	°C
$T_L$	Lead Temperature (Soldering, 10 second)	260	°C

Note 1: Stresses beyond the absolute maximum rating may damage the device and operating in the absolute maximum rating conditions may affect device reliability.

Note 2: The maximum allowable power dissipation at any  $T_A$  (ambient temperature) is calculated using:  $P_D(\text{max}) = (T_J - T_A) / \theta_{JA}$ ;  $T_J = 125^\circ\text{C}$ . Exceeding the maximum allowable power dissipation will result in excessive die temperature.

Note 1: See thermal regulation specifications for changes in output voltage due to heating effects. Load line regulations are measured at a constant junction temperature by low duty cycle pulse testing.

Note 2: Dropout voltage is specified over the full output current range of the device. Dropout voltage is defined as the minimum input/output differential measured at the specified output current. Test points and limits are also shown on the Dropout Voltage curve.

Note 3: Minimum load current is defined as the minimum output current required to maintain regulation.

## Application Circuits

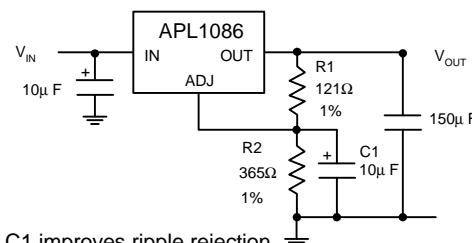

1.25V to 10.7V Adjustable Regulator

\* Needed if device is far from filter capacitors

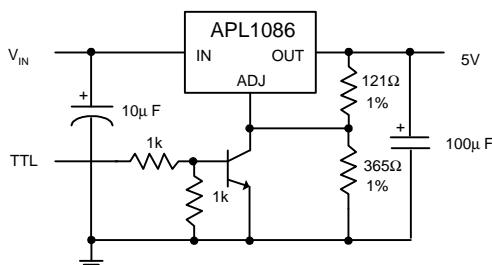

$$V_{OUT} = 1.250V \times \frac{R_1 + R_2}{R_1}$$

Improving Ripple Rejection

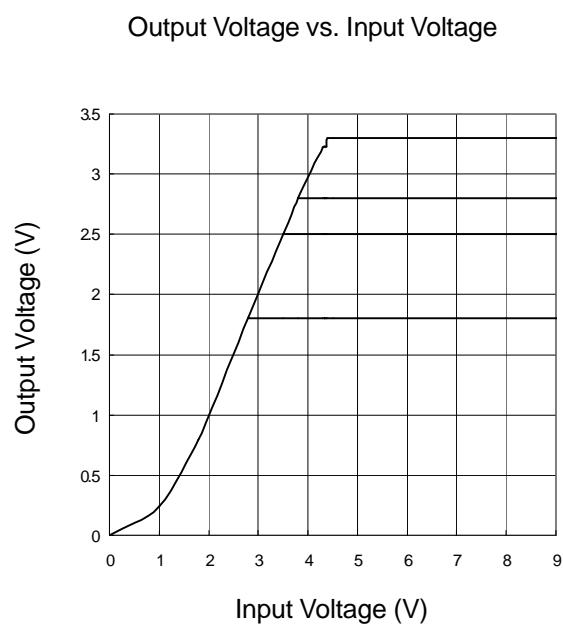

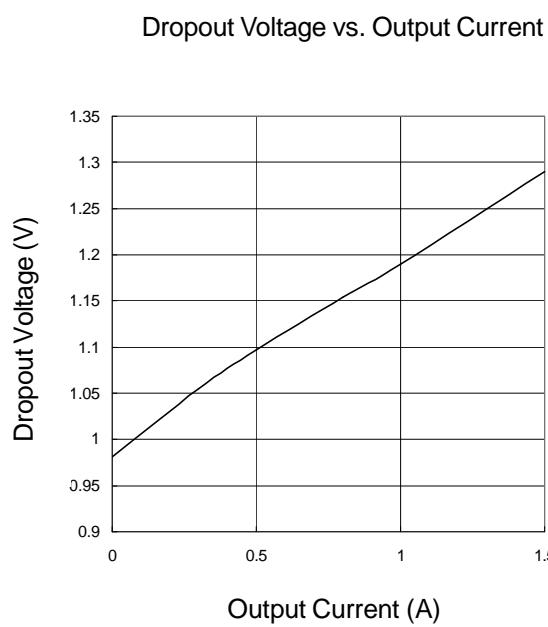

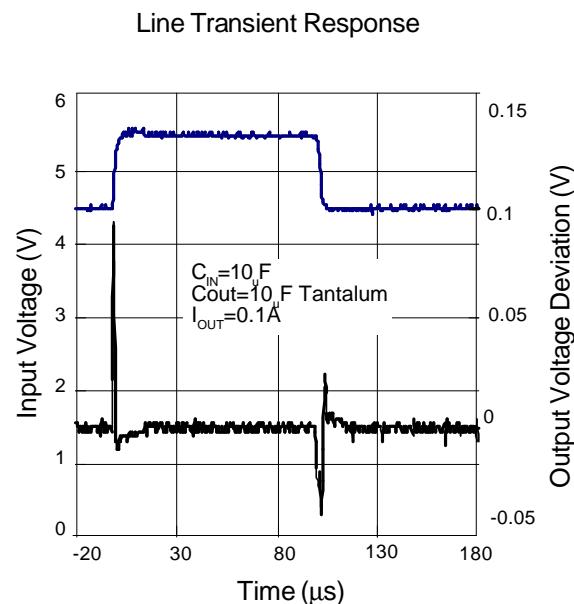

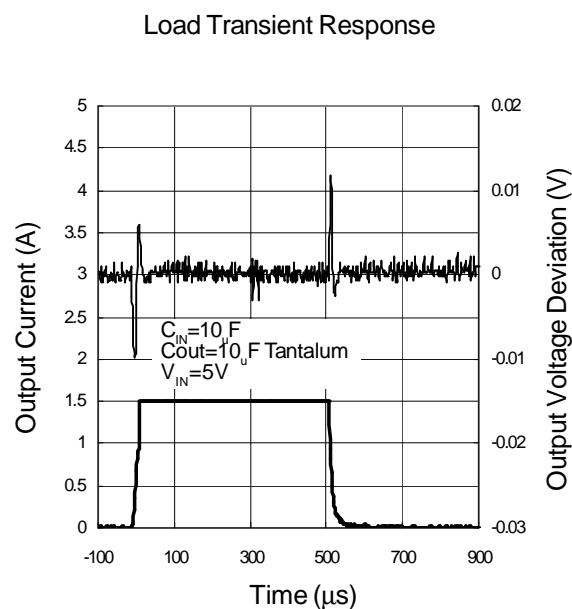

\* C1 improves ripple rejection.  
X<sub>C</sub> should be approximately equal to R1 at ripple frequency

5V Regulator with Shutdown
