

Am54S/74S139 • Am93S21

Dual 2-Line to 4-Line Decoder/Demultiplexer

Distinctive Characteristics

- Advanced Schottky technology
- 7.5ns typical propagation delay

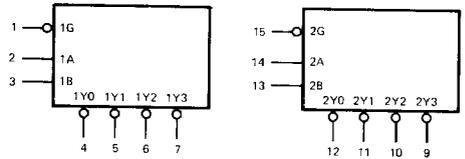

- Two independent decoders/demultiplexers
- 100% reliability assurance testing in compliance with MIL-STD-883.

FUNCTIONAL DESCRIPTION

The Am54S/74S139 and Am93S21 are dual 2-line to 4-line decoder/demultiplexer units fabricated using advanced Schottky technology. Each decoder has two buffered select inputs A and B which are decoded to one of four Y outputs.

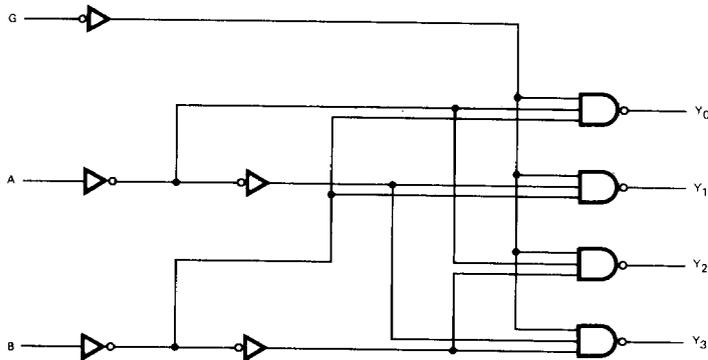

An active LOW enable can be used for gating or can be used as a data input for demultiplexing applications. When the enable is HIGH, all four Y outputs are HIGH, regardless of the A and B inputs.

LOGIC SYMBOL

V_{CC} = Pin 16
GND = Pin 8

4. Not more than one output should be shorted at a time. Duration of the short circuit test should not exceed one second.
5. I_{CC} is measured with all outputs enabled and open.
