SCAS611 - JUNE 1998

- EPIC[™] (Enhanced-Performance Implanted CMOS) Submicron Process
- Unbuffered Output
- Typical V_{OLP} (Output Ground Bounce)
 < 0.8 V at V_{CC} = 3.3 V, T_A = 25°C
- Typical V_{OHV} (Output V_{OH} Undershoot)
 > 2 V at V_{CC} = 3.3 V, T_A = 25°C
- Inputs Accept Voltages to 5.5 V
- Package Options Include Plastic Small-Outline Transistor (DBV, DCK) Packages

description

This single inverter gate is designed for 1.65-V to 3.6-V V_{CC} operation.

The SN74LVC1GU04A contains one inverter with an unbuffered output, and performs the Boolean function $Y = \overline{A}$.

The input can be driven from either 3.3-V or 5-V devices. This feature allows the use of this device as a translator in a mixed 3.3-V/5-V system environment.

The SN74LVC1GU04A is characterized for operation from -40°C to 85°C.

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)[†]

Supply voltage range, V _{CC}	
Input voltage range, V _I (see Note 1)	–0.5 V to 6.5 V
Output voltage range, V _O (see Notes 1 and 2)	$\dots -0.5$ V to V _{CC} + 0.5 V
Input clamp current, I _{IK} (V _I < 0)	
Output clamp current, I_{OK} (V _O < 0)	
Continuous output current, I _O	±50 mA
Continuous current through V _{CC} or GND	±100 mA
Package thermal impedance, θ_{JA} (see Note 3): DBV package	347°C/W
DCK package	389°C/W
Storage temperature range, T _{stg}	–65°C to 150°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.

2. The value of V_{CC} is provided in the recommended operating conditions table.

3. The package thermal impedance is calculated in accordance with JESD 51.

- NOTES: A. CL includes probe and jig capacitance.
 - B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
 C. All input pulses are supplied by generators having the following characteristics: PRR ≤ 10 MHz, Z_O = 50 Ω, t_f ≤ 2 ns, t_f ≤ 2 ns.
 - D. The outputs are measured one at a time with one transition per measurement.
 - E. tpLz and tpHz are the same as tdis.
 - F. tpzL and tpzH are the same as ten.
 - G. tPLH and tPHL are the same as tpd.
