

MOTOROLA

DESCRIPTION — The SN54LS/74LS604 thru SN54LS/74LS607 are multiplexed latches designed for storing data from two input buses, A and B, and providing the stored data from either the A or B register to the output bus.

Data is loaded by the clock on the positive going transition (low-level to high-level). Control of the active and high impedance states of the outputs is also on the clock pin. The outputs are in the HIGH impedance or OFF state when the clock pin is LOW and the outputs are enabled when the clock pin is HIGH.

The SN54LS/74LS604 and 605 are designed for high speed operation and the SN54LS/74LS606 and 607 are designed to eliminate decoding voltage spikes. The SN54LS/74LS604 and 606 have 3-state outputs while the SN54LS/74LS605 and 607 are open collector.

N Suffix — Case 710-02 (Plastic)

FUNCTION TABLE

A1-A8	B1-B8	SELECT A/B	CLOCK	INPUTS	OUTPUTS
				Y1-Y8	
A data	B data	L	↑	B data	B data
A data	B data	H	↓	A data	Z or Off
X	X	X	L	Z or Off	
X	X	L	H		
X	X	H	H	B register stored data	A register stored data

H = high level (steady state)

X = irrelevant

Off = H if pull-up resistor is connected to open-collector output

L = low level (steady state)

2 = high-impedance state

↑ = transition from low to high level

GUARANTEED OPERATING RANGES

SYMBOL	PARAMETER				MIN	TYP	MAX	UNIT
		MIN	TYP	MAX				
V _{CC}	Supply Voltage	54 74	4.5 4.75	5.0 5.0	5.5 5.25			V
