

Surface Mount PIN Diodes

Technical Data

HSMP-38XX and HSMP-48XX Series

Features

- **Diodes Optimized for:**
 - Low Current Switching
 - Low Distortion Attenuating
 - Ultra-Low Distortion Switching
 - Microwave Frequency Operation
- **Surface Mount SOT-23 and SOT-143 Packages**
 - Single and Dual Versions
 - Tape and Reel Options Available
- **Low Failure in Time (FIT) Rate^[1]**

Note:

1. For more information see the Surface Mount PIN Reliability Data Sheet.

Description/Applications

The HSMP-380X and HSMP-381X series are specifically designed for low distortion attenuator applications. The HSMP-382X series is optimized for switching applications where ultra-low resistance is required. The HSMP-3880 switching diode is an ultra low distortion device optimized for higher power applications from 50 MHz to 1.5 GHz. The HSMP-389X series is optimized for switching applications where low resistance at low current and low capacitance are

required. The HSMP-48XX series are special products featuring ultra low parasitic inductance in the SOT-23 package, specifically designed for use at frequencies which are much higher than the upper limit for conventional SOT-23 PIN diodes. The HSMP-4810 diode is a low distortion attenuating PIN designed for operation to 3 GHz. The HSMP-4820 diode is ideal for limiting and low inductance switching applications up to 1.5 GHz. The HSMP-4890 is optimized for low current switching applications up to 3 GHz.

The HSMP-386X series of general purpose PIN diodes are designed for two classes of applications. The first is attenuators where current consumption is the most important design consideration. The second application for this series of diodes is in switches where low cost is the driving issue for the designer.

The HSMP-386X series Total Capacitance (C_T) and Total Resistance (R_T) are typical specifications. For applications that require guaranteed performance, the general purpose HSMP-383X series is recommended. For low distortion

Package Lead Code Identification

attenuators, the HSMP-380X or -381X series are recommended. For high performance switching applications, the HSMP-389X series is recommended.

A SPICE model is not available for PIN diodes as SPICE does not provide for a key PIN diode characteristic, carrier lifetime.

Absolute Maximum Ratings^[1] $T_A = 25^\circ\text{C}$

Symbol	Parameter	Units	Absolute Maximum
I_F	Forward Current (1 ms Pulse)	Amp	1
P_t	Total Device Dissipation	mW ^[2]	250
P_{iv}	Peak Inverse Voltage	—	Same as V_{BR}
T_j	Junction Temperature	$^\circ\text{C}$	150
T_{STG}	Storage Temperature	$^\circ\text{C}$	-65 to 150

Notes:

- Operation in excess of any one of these conditions may result in permanent damage to this device.
- CW Power Dissipation at $T_{LEAD} = 25^\circ\text{C}$. Derate to zero at maximum rated temperature.

Microstrip Series

Connection for HSMP-48XX Series

In order to take full advantage of the low inductance of the HSMP-48XX series when using them in series application, both lead 1 and lead 2 should be connected together, as shown above.

Figure 33. Circuit Layout.

Microstrip Shunt Connections for HSMP-48XX Series

In the diagram above, the center conductor of the microstrip line is interrupted and leads 1 and 2 of the

HSMP-38XX series diode are placed across the resulting gap. This forces the 0.5 nH lead inductance of leads 1 and 2 to appear as part of a low pass filter, reducing the shunt parasitic inductance and

Figure 35. Circuit Layout.

Co-Planar Waveguide Shunt Connection for HSMP-48XX Series

Co-Planar waveguide, with ground on the top side of the printed circuit board, is shown

in the diagram above. Since it eliminates the need for via holes to ground, it offers lower shunt parasitic inductance and higher maximum attenuation when compared to a microstrip circuit.

*0.8 pF TYPICAL FOR HSMP-4820

Figure 34. Equivalent Circuit.

increasing the maximum available attenuation. The 0.3 nH of shunt inductance external to the diode is created by the via holes, and is a good estimate for 0.032" thick material.

SOT-143

Package Characteristics

Lead Material	Alloy 42
Lead Finish	Tin-Lead 85-15%
Maximum Soldering Temperature	260°C for 5 seconds
Minimum Lead Strength	2 pounds pull
Typical Package Inductance	2 nH
Typical Package Capacitance	0.08 pF (opposite leads)

Ordering Information

Option L30 = Bulk
Option L31 = Tape and Reel,
See Figures 37 and 38

Conforms to Electronic Industries
RS-481, "Taping of Surface
Mounted Components for Auto-
mated Placement." Standard
Quantity is 3,000 Devices/Reel.
