

SN54HC73, SN74HC73 DUAL J-K FLIP-FLOPS WITH CLEAR

D2684, DECEMBER 1982 - REVISED SEPTEMBER 1987

- Package Options Include Plastic "Small Outline" Packages and Standard Plastic and Ceramic 300-mil DIPs
- Dependable Texas Instruments Quality and Reliability

description

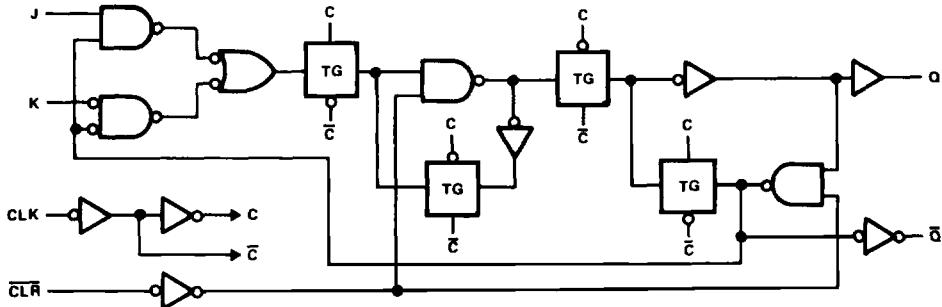

These devices contain two independent J-K negative-edge-triggered flip-flops. A low level at the Clear input resets the outputs regardless of the other inputs. When Clear is inactive (high), data at the J and K inputs meeting the setup time requirements are transferred to the outputs on the negative-going edge of the clock pulse. Following the hold time interval, data at the J and K inputs may be changed without affecting the levels at the outputs. These flip-flops can also perform as toggle flip-flops by tying J and K high.

The SN54HC73 is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74HC73 is characterized for operation from -40°C to 85°C .
