

RN5RZ SERIES

OUTLINE

The RN5RZ Series are voltage regulator ICs with high output voltage accuracy, low supply current, low dropout voltage and high ripple rejection developed through the use of a CMOS process. Each of these voltage regulator ICs consists of a voltage reference unit, an error amplifier, output voltage setting resistors, a current limit circuit and a chip enable circuit. (Provided two types of chip enable circuit ; "H" active and "L" active, that can be selected when order.)

The output voltage of these ICs is fixed with high accuracy.

In addition to low supply current from CMOS process, the RN5RZ Series may lengthen battery life through low dropout voltage and chip enable function thanks to the built-in low ON resistance transistor. Also when compared with conventional regulators that employ CMOS process, these ICs have superior ripple rejection, input transient response characteristic and load transient response characteristic thus making these product suitable for power supply for hand-held communication equipment.

Since the package for these ICs is the SOT-23-5 package, high density mounting of the ICs on boards is possible.

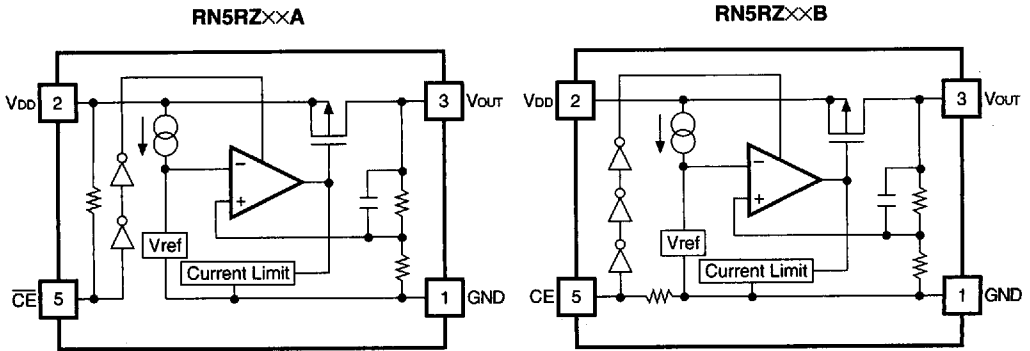

FEATURES

- Ultra-Low Supply Current.....TYP. 20 μ A
- Ultra-Low Supply Current (Standby).....TYP. 0.1 μ A
- High Accuracy Output Voltage..... \pm 2.0%
- High Ripple Rejection.....TYP.55dB (f=1kHz)
- Low Dropout Voltage.....TYP. 0.2V (I_{OUT}=60mA)
- Low Temperature-Drift Coefficient of Output Voltage.....TYP. \pm 100ppm/ $^{\circ}$ C
- Excellent Line Regulation.....TYP. 0.05%/V
- Output Voltage.....Stepwise setting with a step of 0.1V in the range of 2.0V to 6.0V is possible (refer to Selection Guide).
- Built-in Short Current Limit Circuit.....TYP. 50mA
- Small Package.....SOT-23-5 (Mini-mold)

APPLICATIONS

- Power source for battery-powered equipment.
- Power source for cellular phones, cameras, VCRs, camcorders, hand-held audio instruments and hand-held communication equipment.
- Power source for domestic appliances.

BLOCK DIAGRAMS

SELECTION GUIDE

The output voltage, the active type of the chip enable circuit, the packing type, and the taping type for the ICs can be selected at the user's request.

These selections can be made by designating the part number as shown below:

RN5RZ××××-×× ← Part Number
 ↑ ↑ ↑ ↑
 a b c d

Code	Contents
a	Setting Output Voltage (Vout) : Stepwise setting with a step of 0.1V in the range of 2.0V to 6.0V is possible.
b	Designation of Active Type of The Chip Enable Circuit : A : "L" active type B : "H" active type
c	Designation of Packing Type : A : Taping C : Antistatic bag (for Samples only)
d	Designation of Taping Type : Ex. TR, TL (refer to Taping Specifications ; TR type is the standard direction.)

For example, the product with Output Voltage of 5.0V, Specified Polarity of Chip Enable is "H" active and Taping Type TR is designated by Part Number RN5RZ50BA-TR.

PIN CONFIGURATION

PIN DESCRIPTION

Pin No.	Symbol	Description
1	GND	Ground Pin
2	V _{DD}	Input Pin
3	V _{OUT}	Output Pin
4	NC	No Connection
5	CE or $\overline{\text{CE}}$	Chip Enable Pin

ABSOLUTE MAXIMUM RATINGS

Symbol	Item	Ratings	Unit
V _{IN}	Input Voltage	9	V
V _{CE}	Input Voltage (CE or $\overline{\text{CE}}$ Pin)	-0.3 to V _{IN} +0.3	V
V _{OUT}	Output Voltage	-0.3 to V _{IN} +0.3	V
I _{OUT}	Output Current	200	mA
P _D	Power Dissipation	250	mW
T _{opt}	Operating Temperature	-40 to +85	°C
T _{stg}	Storage Temperature	-55 to +125	°C

ABSOLUTE MAXIMUM RATINGS

Absolute Maximum ratings are threshold limit values that must not be exceeded even for an instant under any conditions. Moreover, such values for any two items must not be reached simultaneously. Operation above these absolute maximum ratings may cause degradation or permanent damage to the device. These are stress ratings only and do not necessarily imply functional operation below these limits.

OPERATION

In these ICs, Output Voltage V_{OUT} is detected by Feed-back Registers R1, R2, and the detected Output Voltage is compared with a reference voltage by an Error Amplifier, so that a constant voltage is output.

A current limit circuit working for Short Protect and a chip enable circuit for standby function are included.

FOR STABLE OPERATION

• Countermeasure for Noise

Measuring circuit for white noise ; RN5RZ30B

The relation between output current (I_{OUT}) and Equivalent Series Resistance (ESR) in the output capacitor are described below. The conditions when the noise level is under $40\mu\text{V}$ (Avg.) are marked as the hatched area in the graph.

[Measuring conditions]

Frequency band : 0Hz to 1MHz

Temperature : 25°C

APPLICATION HINTS

When using these ICs, be sure to take care regarding the following points :

- In these ICs, phase compensation is made for securing stable operation even when the load current is varied. For this purpose, be sure to use a capacitor COUT with good frequency characteristics and ESR in the range described above.
- Make VDD and GND line sufficient. When the impedance of these is high, the noise may be picked up or operation may become unstable.
- Connect the capacitor with a capacitance of about 1 μ F between VDD and GND with wiring as short as possible.
- Set external components as close as possible to the ICs and make wiring short.

POWER DISSIPATION

The power dissipation of RN5RZ series (SOT-23-5) is measured. The measuring conditions as follows:

Material : glass cloth epoxy plastic
 Size of the board : 15×15×1.6mm
 Wind velocity : 0m/s
 Mounted with solder
