## Low-Voltage Dual SPST Analog Switch

## DESCRIPTION

The DG9262, DG9263 is a single-pole/single-throw monolithic CMOS analog device designed for high performance switching of analog signals. Combining low power, high speed ( $\mathrm{t}_{\mathrm{ON}}: 35 \mathrm{~ns}$, $\mathrm{t}_{\mathrm{OFF}}: 20 \mathrm{~ns}$ ), low on-resistance ( $\mathrm{R}_{\mathrm{DS}(\mathrm{on})}$ : $40 \Omega$ ) and small physical size, the DG9262, DG9263 is ideal for portable and battery powered applications requiring high performance and efficient use of board space.
The DG9262, DG9263 is built on Vishay Siliconix's low voltage BCD-15 process. Minimum ESD protection, per Method 3015.7 is 2000 V. An epitaxial layer prevents latchup. Break-before make is guaranteed for DG9262, DG9263.
Each switch conducts equally well in both directions when on, and blocks up to the power supply level when off.
