

TC74HCT257AP/AF QUAD 2-Channel Multiplexer (3-state)

TC74HCT258AP/AF QUAD 2-Channel Multiplexer (3-state, Inverting)

The TC74HCT257A and TC74HCT258A are high speed CMOS MULTIPLEXERS fabricated with silicon gate C²MOS technology.

They achieve the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.

Each is composed of four independent 2-channel multiplexers with common SELECT and OUTPUT ENABLE (OE).

The TC74HCT257A is an inverting multiplexer, while the TC74HC258A is non-inverting.

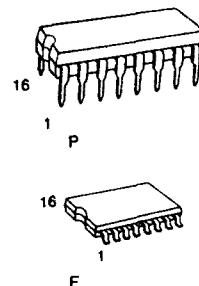

If OE is set low, the outputs are held in a high-impedance state. When SELECT is set low, "A" data inputs are enabled.

Conversely, when SELECT is high, "B" data inputs are enabled.

All inputs are equipped with protection circuits against static discharge or transient excess voltage.

Features

Note (1) C_{PD} is defined as the value of the internal equivalent capacitance which is calculated from the operating current consumption without load.

Average operating current can be obtained by the equation:

$$I_{CC(\text{avg})} = C_{PD} \cdot V_{CC} \cdot f_{IN} + I_{CO}/4(\text{per bit})$$
