OCTAL BIDIRECTIONAL TRANSCEIVER WITH 3-STATE OUTPUTS

General Description

The ABT245 contains eight non-inverting bidirectional buffers with TRI-STATE outputs and is intended for bus-orientated applications. Current sinking capability is 48 mA on both the A and B ports. The Transmit/Receive(T/R) input determines the direction of data flow through the bidirectional transceiver. Transmit(active HIGH) enables data from A ports to B ports; Receive(active LOW) enables data from B ports to A ports. The Output Enable input, when HIGH, disables both A and B ports by placing them in a HIGH Z condition.
