CD54/74HCT03

High-Speed CMOS Logic

FUNCTIONAL DIAGRAM

The RCA-CD54/74HC03 and CD54/74HCT03 logic gates utilize silicon-gate CMOS technology to achieve operating speeds similar to LSTTL gates with the low power consumption of standard CMOS integrated circuits. All devices have the ability to drive 10 LSTTL loads. The 54HCT/74HCT logic family is functionally as well as pin compatible with the standard 54LS/74LS logic family.

These open-drain NAND gates can drive into resistive loads to output voltages as high as 10 V. Minimum values of R_L required vs. load voltage are shown in Fig. 2.

The CD54HC03 and CD54HCT03 are supplied in 14-lead dual-in-line frit-seal ceramic packages (F suffix). The CD74HC03 and CD74HCT03 are supplied in 14-lead dual-in-line plastic packages (E suffix) and in 14-lead dual-in-line surface mount packages (M suffix). Both types are also available in chip form (H suffix).
