

# LM118/218/318

## High-Speed Operational Amplifier

### Distinctive Characteristics

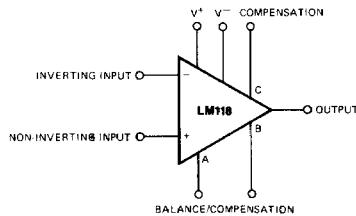

- The LM118/218/318 are functionally, electrically, and pin-for-pin equivalent to the National LM118/218/318
- Slew rate:  $70V/\mu s$
- Small signal bandwidth: 15MHz
- Internal frequency compensation
- Supply voltage range:  $\pm 5V$  to  $\pm 20V$

- Electrically tested and optically inspected dice for hybrid manufacturers.
- Available in metal can, hermetic dual-in-line, hermetic flat package or plastic minidip.

### FUNCTIONAL DESCRIPTION

The LM118/218/318 are internally compensated high-speed operational amplifiers featuring minimum slew rate of  $50V/\mu s$ , low input bias currents, large input voltage range and excellent performance over a wide range of supply voltages and temperature. They have provision for increased speeds when operating in the inverting mode.

### ORDERING INFORMATION\*

| Part Number | Package Type | Temperature Range | Order Number |
|-------------|--------------|-------------------|--------------|
| LM318       | Metal Can    | 0 to +70°C        | LM318H       |
|             | Hermetic DIP | 0 to +70°C        | LM318D       |
|             | Flat Package | 0 to +70°C        | LM318F       |
|             | Molded DIP   | 0 to +70°C        | LM318N       |
|             | Dice         | 0 to +70°C        | LD318        |
| LM218       | Leadless     | 0 to +70°C        | LM318L       |
|             | Metal Can    | -25 to +85°C      | LM218H       |
|             | Hermetic DIP | -25 to +85°C      | LM218D       |
|             | Flat Pak     | -25 to +85°C      | LM218F       |
|             | Leadless     | -25 to +85°C      | LM218L       |
| LM118       | Metal Can    | -55 to +125°C     | LM118H       |
|             | Hermetic DIP | -55 to +125°C     | LM118D       |
|             | Flat Package | -55 to +125°C     | LM118F       |
|             | Dice         | -55 to +125°C     | LD118        |
|             | Leadless     | -55 to +125°C     | LM118L       |

\*Also available with burn-in processing. To order add suffix B to part number.

Note: 1. On Metal Can, pin 4 is connected to case.

The Following Specifications Apply Over The Operating Temperature Ranges

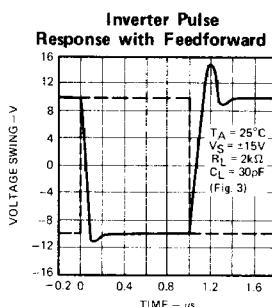

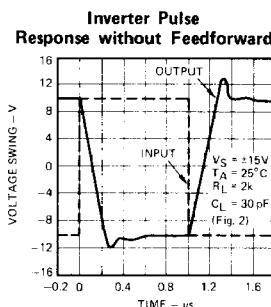

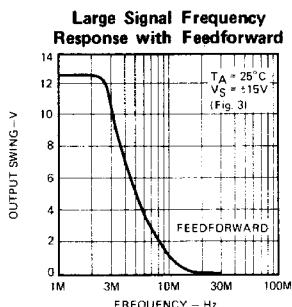

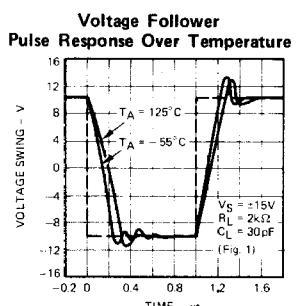

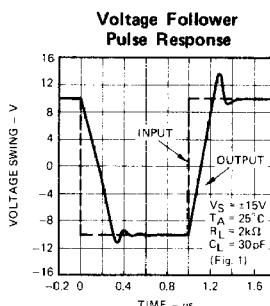

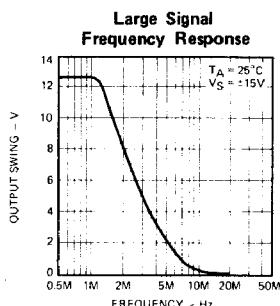

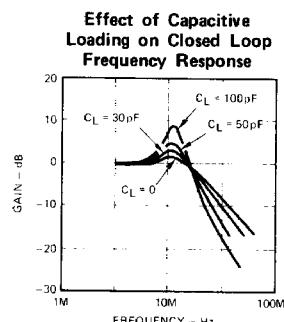

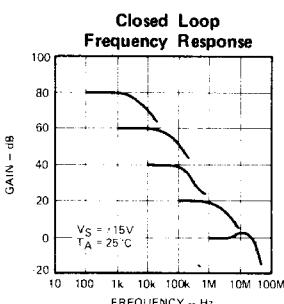

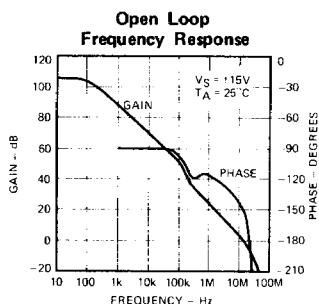

|                                |   |            |            |          |    |
|--------------------------------|---|------------|------------|----------|----|
| Input Offset Voltage           | $R_S \leq 5\text{k}\Omega$  | 15         | 6          | mV       |    |
| Input Offset Current           |   | 300        | 100        | nA       |    |
| Input Bias Current             |   | 750        | 500        | nA       |    |
| Large Signal Voltage Gain      | $V_S = \pm 15\text{V}$ , $V_{OUT} = \pm 10\text{V}$<br>$R_L \geq 2\text{k}\Omega$ | 20         | 25         | V/mV     |    |
| Input Voltage Range            | $V_S = \pm 15\text{V}$  | $\pm 11.5$ | $\pm 11.5$ | V        |    |
| Common Mode Rejection Ratio    | $R_S \leq 5\text{k}\Omega$  | 70         | 80         | dB       |    |
| Supply Voltage Rejection Ratio | $R_S \leq 5\text{k}\Omega$  | 65         | 70         | dB       |    |
| Output Voltage Swing           | $V_S = \pm 15\text{V}$ , $R_L = 2\text{k}\Omega$                                  | $\pm 12$   | $\pm 13$   | $\pm 13$ | V  |
| Supply Current                 | $V_S = \pm 20\text{V}$ , $T_A = 125^\circ\text{C}$                                |            |            | 7        | mA |

- Notes:
- Derate Metal Can package at  $6.8 \text{ mW}/^\circ\text{C}$  for operation at ambient temperatures above  $75^\circ\text{C}$ , the Dual-In-Line package at  $9 \text{ mW}/^\circ\text{C}$  for operation at ambient temperatures above  $95^\circ\text{C}$ , and the Flat Package at  $5.4 \text{ mW}/^\circ\text{C}$  for operation at ambient temperatures above  $57^\circ\text{C}$ .
  - The inputs are shunted with diodes for overvoltage protection. To limit the current in the protection diodes, resistances of  $2 \text{ k}\Omega$  or greater should be inserted in series with the input leads for differential input voltages greater than  $\pm 5 \text{ V}$ .
  - For supply voltages less than  $\pm 15 \text{ V}$ , the maximum input voltage is equal to the supply voltage.
  - Unless otherwise specified, these specifications apply for supply voltages from  $\pm 5 \text{ V}$  to  $\pm 20 \text{ V}$ .

## PERFORMANCE CURVES

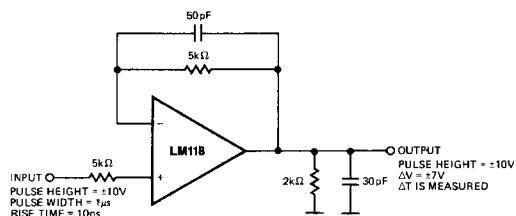

## PERFORMANCE CURVES

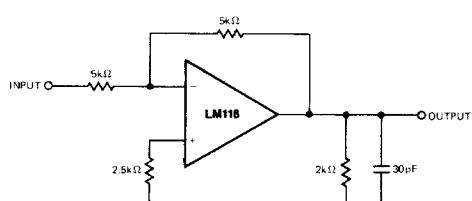

The high gain and large bandwidth of the LM118 make it mandatory to observe the following precautions in using the device, as is the case with any high-frequency amplifier. Circuit layout should be arranged to keep all lead lengths as short as possible and the output separated from the inputs. The values of the feedback and source impedances should be kept small to reduce the effect of stray capacitance at the inputs. The power supplies must be bypassed to ground at the supply leads of the amplifier with low inductance capacitors. Capacitive loading must be kept to minimum, or the amplifier must be isolated as shown in the applications.
