- Extremely low supply current: **9µA typ/comp.**
- Wide single supply range **2.7V to 16V** or dual supplies ($\pm 1.35V$ to $\pm 8V$)
- Extremely low input bias current: **1pA typ.**
- Extremely low input offset current: **1pA typ.**
- Input common-mode voltage range includes GND
- High input impedance: $10^{12}\Omega$ typ
- Last response time: $2\mu s$ typ. for 5mV overdrive
- Pin-to-pin and functionally compatible with bipolar LM339

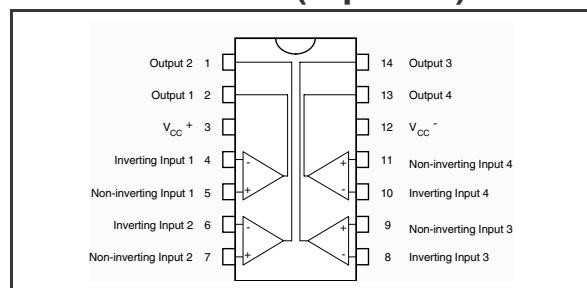

Description

The TS3704 is a micropower CMOS quad voltage comparator with extremely low consumption of $9\mu A$ typ / comparator (20 times less than bipolar LM339). The push-pull CMOS output stage allows power and space saving by eliminating the external pull-up resistor required by usual open-collector output comparators.

Thus response times remain similar to the LM339.

1. All voltage values, except differential voltage, are with respect to network ground terminal.
2. Differential voltages are the non-inverting input terminal with respect to the inverting input terminal.
3. The magnitude of the input and the output voltages must never exceed the magnitude of the positive and negative supply voltages.
4. Guaranteed by design.
5. P_d is calculated with $T_{amb} = +25^\circ\text{C}$, $T_j = +150^\circ\text{C}$ and
 $R_{thja} = 80^\circ\text{C}/\text{W}$ for DIP14 package
 $R_{thja} = 150^\circ\text{C}/\text{W}$ for SO14 package
 $R_{thja} = 175^\circ\text{C}/\text{W}$ for TSSOP14 package
6. Human body model, 100pF discharged through a $1.5\text{k}\Omega$ resistor into pin of device.
7. Machine model ESD, a 200pF cap is charged to the specified voltage, then discharged directly into the IC with no external series resistor (internal resistor $< 5\Omega$), into pin to pin of device.
