DESCRIPTION

The high performance MS318001 Read Only Memory is organized as 1,048,576 bytes by 8 bits. It is designed to be compatible with all microprocessors and similar applications where high performance, low cost, mass storage and simple interfacing are important design considerations.

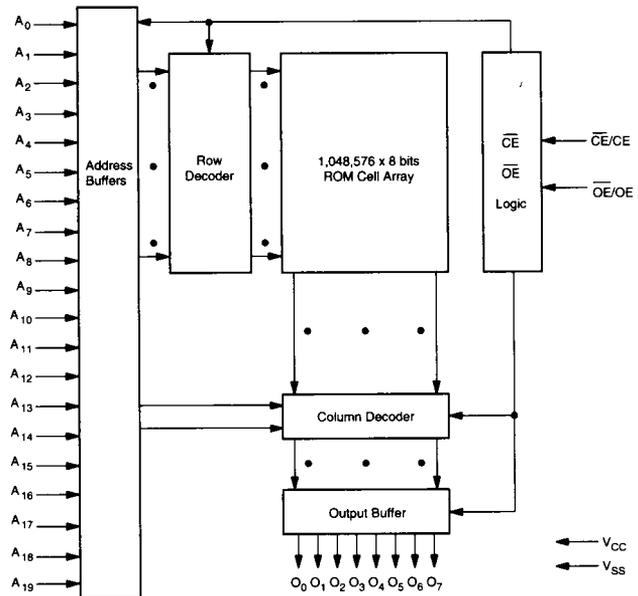

The MS318001 will automatically powerdown when no address transitions occur. Powerdown also occurs when \overline{CE} goes HIGH, and the device stays in a low power standby mode as long as \overline{CE} remains HIGH.

PIN CONFIGURATION

*70ns is advance information only

PIN DESCRIPTIONS

SYMBOL	FUNCTION
A ₀ - A ₁₉	Address Input
O ₀ - O ₇	Data Output
V _{SS}	Ground
V _{CC}	Power Supply
CE/CE	Chip Enable ⁽¹⁾
OE/OE	Output Enable ⁽¹⁾

1. The CE/CE and the OE/OE input control functions are user definable, as active low (default) or active high.

ABSOLUTE MAXIMUM RATINGS ⁽²⁾

Temperature Under Bias	-10°C to +85°C
Storage Temperature	-45°C to +125°C
Supply Voltage to Ground Potential	-0.3V to +7.0V
Applied Output Voltage	-0.5V to V _{CC} + 0.5V
Applied Input Voltage	-0.5V to V _{CC} + 0.5V

2. Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not recommended. Exposure to ABSOLUTE MAXIMUM RATINGS for extended periods may affect device reliability, and degrade its performance characteristics.
