## **54AC/74AC399 • 54ACT/74ACT399**

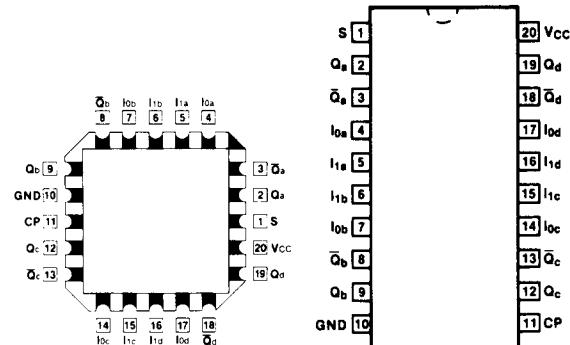

### **Quad 2-Port Register**

#### **Description**

The 'AC/ACT398 and 'AC/ACT399 are the logical equivalents of a quad 2-input multiplexer feeding into four edge-triggered flip-flops. A common Select input determines which of the two 4-bit words is accepted. The selected data enters the flip-flop on the rising edge of the clock. The 'AC/ACT399 is the 16-pin version of the 'AC/ACT398, with only the Q outputs of the flip-flops available.

- **Select Inputs from Two Data Sources**
- **Fully Positive Edge-Triggered Operation**
- **Both True and Complement Outputs—'AC/ACT398**
- **Outputs Source/Sink 24 mA**
- **'ACT398 and 'ACT399 have TTL-Compatible Inputs**

#### **Pin Names**

S	Common Select Input
CP	Clock Pulse
I <sub>0a</sub> - I <sub>0d</sub>	Data Inputs from Source 0
I <sub>1a</sub> - I <sub>1d</sub>	Data Inputs from Source 1
Q <sub>a</sub> - Q <sub>d</sub>	Register True Outputs
Q <sub>a</sub> -bar - Q <sub>d</sub> -bar	Register Complementary Outputs ('AC/ACT398)

**Functional Description**

The 'AC/ACT398 and 'AC/ACT399 are high-speed quad 2-port registers. They select four bits of data from either of two sources (Ports) under control of a common Select input (S). The selected data is transferred to a 4-bit output register synchronous with the LOW-to-HIGH transition of the Clock input (CP). The 4-bit D-type output register is fully edge-triggered. The Data inputs ( $I_{0x}$ ,  $I_{1x}$ ) and Select input (S) must be stable only a setup time prior to and hold time after the LOW-to-HIGH transition of the Clock Input for predictable operation. The 'AC/ACT398 has both Q and  $\bar{Q}$  outputs.

**Function Table**

Inputs				Outputs	
S	$I_0$	$I_1$	CP	Q	$\bar{Q}^*$
L	L	X	↓	L	H
L	H	X	↓	H	L
H	X	L	↓	L	H
H	X	H	↓	H	L

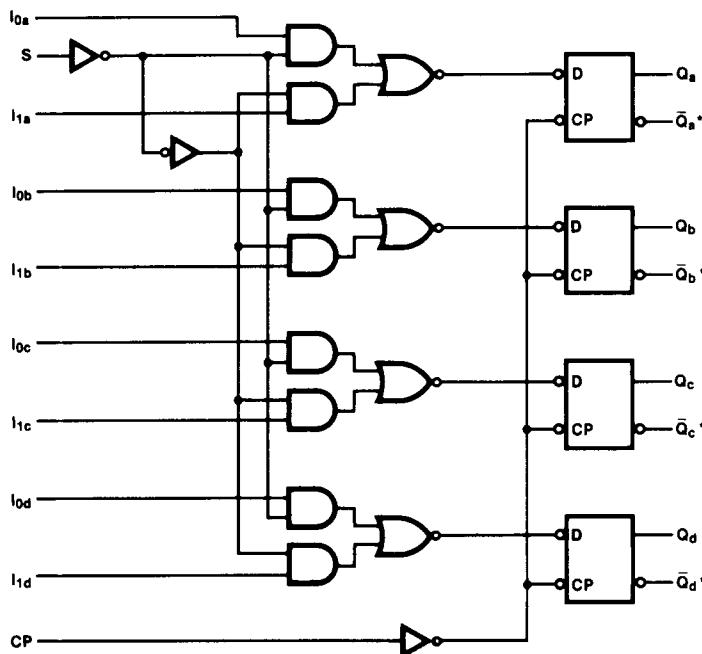

H = HIGH Voltage Level

L = LOW Voltage Level

X = Immaterial

↓ = LOW-to-HIGH Clock Transition

\* = 'AC/ACT398 only

**Logic Diagram**
