

# Rochester Electronics Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All recreations are done with the approval of the OCM.

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceed the OCM data sheet.

## **DM74LS38**

# **Quad 2-Input NAND Buffer with Open-Collector Outputs**

## **General Description**

This device contains four independent gates, each of which performs the logic NAND function. The open-collector outputs require external pull-up resistors for proper logical operation.

## **Pull-Up Resistor Equations**

$$R_{MAX} = \frac{V_{CC} \left(Min\right) - V_{OH}}{N_1 \left(I_{OH}\right) + N_2 \left(I_{IH}\right)}$$

$$R_{MIN} = \frac{V_{CC} (Max) - V_{OL}}{I_{OL} - N_3 (I_{IL})}$$

Where:

 $N_1 \ (I_{OH}) = total \ maximum \ output \ high \ current$  for all outputs tied to pull-up resistor

 $N_2$  (I<sub>IH</sub>) = total maximum input high current for

all inputs tied to pull-up resistor

 $N_{3}\ (I_{IL})=total\ maximum\ input\ low\ current\ for$ 

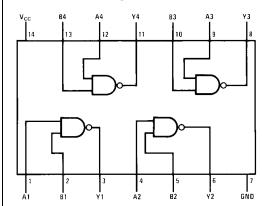

all inputs tied to pull-up resistor

**Note 1:** The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
