

## High Voltage EL Lamp Driver IC

### Features

- ▶ 1.8V to 3.5V operating supply voltage
- ▶ DC to AC conversion
- ▶ Output voltage regulation
- ▶ Adjustable output lamp frequency
- ▶ Adjustable converter frequency
- ▶ Enable/disable function

### Applications

- ▶ Pagers
- ▶ Portable Transceiver
- ▶ Cellular phones
- ▶ Remote control units
- ▶ Calculators

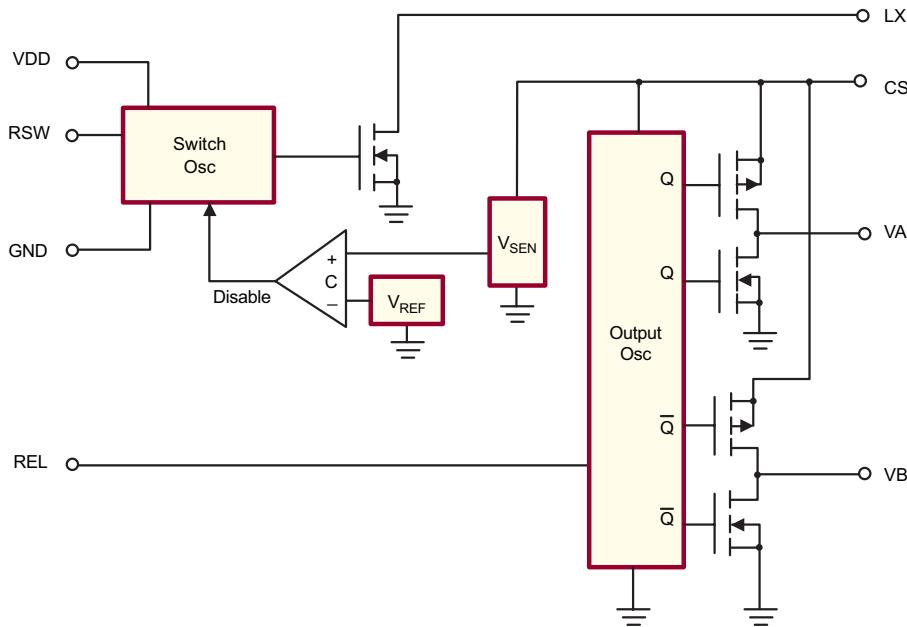

### General Description

The Supertex HV826 is a high voltage driver designed for driving EL lamps. The input supply voltage range is from 1.8V to 3.5V. The device uses a single inductor and a minimum number of passive components. The nominal regulated output voltage that is applied to the EL lamp is  $\pm 80V$ . The chip can be enabled/disabled by connecting the resistor on the RSW-Osc pin to VDD/GND.

The HV826 has two internal oscillators, a switching MOSFET, and a high voltage EL lamp driver. The frequency for the switching MOSFET is set by an external resistor connected between the RSW-Osc pin and the VDD supply pin. The EL lamp driver frequency is set by an external resistor connected between REL-Osc pin and the VDD pin. An external inductor is connected between the LX pin and VDD pin. A 0.01-0.1 $\mu F$  capacitor is connected between the CS pin and GND. The EL lamp is connected between the VA pin and the VB pin.

The switching MOSFET charges the external inductor and discharges it into the capacitor at the CS pin. The voltage at CS will start to increase. Once the voltage at CS reaches a nominal value of 80V, the switching MOSFET is turned OFF to conserve power. The output pins VA and VB are configured as an H bridge and are switching in opposite states to achieve 160V peak-to-peak across the EL lamp.

### HV826 Block Diagram

## Ordering Information

Device	Package Options				
	8-Lead SO		8-Lead MSOP		
HV826	HV826LG	HV826LG-G	HV826MG	HV826MG-G	

-G indicates package is RoHS compliant ('Green')

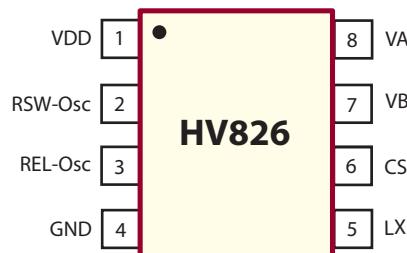

## Absolute Maximum Ratings

Parameter	Value
Supply voltage, $V_{DD}$	-0.5V to +4.5V
Output voltage, $V_{CS}$	-0.5V to +100V
Operating Temperature Range	-25°C to +85°C
Storage Temperature Range	-65°C to +150°C
MSOP-8 Power Dissipation	250mW
SO-8 Power Dissipation	400mW

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.
