## DUAL JK FLIP-FLOP

(With Common Clear and Clock and Separate Set Inputs)

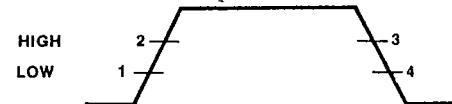

**DESCRIPTION** — The 'H78 is a dual JK master/slave flip-flop with separate Direct Set inputs, a common Direct Clear input and a common Clock Pulse input. Inputs to the master section are controlled by the clock pulse. The clock pulse also regulates the circuitry which connects the master and slave sections. The sequence of operation is as follows: 1) isolate slave from master; 2) enter information from J and K inputs to master; 3) disable J and K inputs; 4) transfer information from master to slave. The logic state of the J and K inputs must not be allowed to change when the clock pulse is in a HIGH state.

### TRUTH TABLE

INPUTS		OUTPUT
@ t <sub>n</sub>		@ t <sub>n</sub> + 1
J	K	Q
L	L	Q <sub>n</sub>
L	H	L
H	L	H
H	H	Q̄ <sub>n</sub>

H = HIGH Voltage Level  
L = LOW Voltage Level  
t<sub>n</sub> = Bit time before clock pulse.  
t<sub>n</sub> + 1 = Bit time after clock pulse.

### CLOCK WAVEFORM

#### Asynchronous Inputs:

LOW input to  $\bar{S}D$  sets Q to HIGH level  
LOW input to  $\bar{C}D$  sets Q to LOW level  
Clear and Set are independent of clock  
Simultaneous LOW on  $\bar{C}D$  and  $\bar{S}D$  is  
makes both Q and  $\bar{Q}$  HIGH

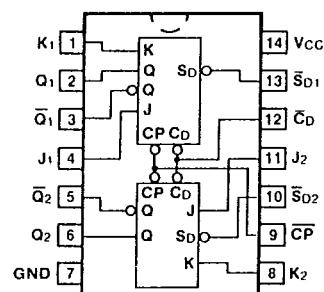

The 'LS78 is a dual JK, negative edge-triggered flip-flop which also offers separate Direct Set inputs, a common Direct Clear and common Clock Pulse input. When the Clock Pulse input is HIGH, the JK inputs are enabled and data is accepted. This data will be transferred to the outputs according to the Truth Table on the HIGH-to-LOW clock transitions.

### ORDERING CODE: See Section 9

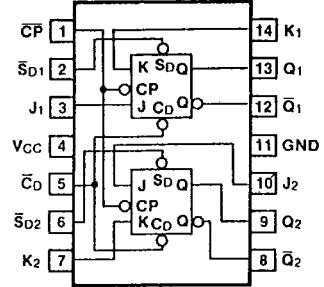

PKGS	PIN OUT	COMMERCIAL GRADE	MILITARY GRADE	PKG TYPE
		V <sub>CC</sub> = +5.0 V ±5%, T <sub>A</sub> = 0°C to +70°C	V <sub>CC</sub> = +5.0 V ±10%, T <sub>A</sub> = -55°C to +125°C	
Plastic DIP (P)	A	74H78PC		9A
	B	74LS78PC		
Ceramic DIP (D)	A	74H78DC	54H78DM	6A
	B	74LS78DC	54LS78DM	
Flatpak (F)	A	74H78FC	54H78FM	3I
