

OUTLINE

The R1210Nxx2C/xx2D Series are CMOS-based PWM step-up DC/DC Converter controllers, with high accuracy, low supply current.

Each of the R1210Nxx2x Series consists of an oscillator, a PWM circuit, a reference voltage unit, an error amplifier, phase compensation circuit, resistors for voltage detection, a chip enable circuit, a controller against drastic load transient and an output voltage detector. A low ripple, high efficiency step-up DC/DC converter can be composed of this IC with only four external components, or an inductor, a diode, a transistor and a capacitor.

The R1210Nxx2x Series can detect drastic change of output voltage with a circuit controller, the load transient response is improved.

Each of the R1210Nxx2x Series has a driver pin, or 'EXT' pin for external transistor. By connecting a power transistor with low ON-resistance to EXT pin, a large current flows through an inductor, thus, large output current can be supplied.

The built-in chip enable circuit can make the standby mode with ultra low quiescent current.

Since the package for these ICs is small SOT-23-5, high density mounting of the ICs on board is possible.

FEATURES

- External Components Only an inductor, a diode, a capacitor, and a transistor
- Standby Current Typ. 0 μ A
- Low Temperature-Drift Coefficient of Output Voltage Typ. \pm 100ppm/ $^{\circ}$ C
- Output Voltage Stepwise Setting with a step of 0.1V in the range of
2.2V to 6.0V
- Two choices of Basic Oscillator Frequency 100kHz (xx2C), 180kHz (xx2D)
- Small Package SOT-23-5 (Mini-mold)
- Low Ripple, Low Noise
- Oscillator Start-up Voltage Max. 0.8V

APPLICATIONS

- Power source for battery-powered equipment.
- Power source for portable communication appliances, cameras, VCRs
- Power source for appliances of which require higher voltage than battery voltage.

BLOCK DIAGRAMS

SELECTION GUIDE

In the R1210N Series, the output voltage, the oscillator frequency, the optional function, and the taping type for the ICs can be selected at the user's request.

The selection can be made by designating the part number as shown below;

R1210N $\overset{\uparrow}{a}$ $\overset{\uparrow}{b}$ $\overset{\uparrow}{c}$ $\overset{\uparrow}{d}$ xx2x-xx ←Part Number

Code	Contents
a	Setting Output Voltage(V_{OUT}): Stepwise setting with a step of 0.1V in the range of 2.2V to 6.0V
b	Designation of Driver 2: External Tr. Driver
c	Designation of Oscillator Frequency C: 100kHz D: 180kHz
d	Designation of Taping Type; Ex.: TR, TL (refer to Taping Specification) "TR" is prescribed as a standard.

PIN CONFIGURATION

PIN DESCRIPTIONS

Pin No	Symbol	Pin Description
1	CE	Chip Enable Pin
2	V _{OUT}	Pin for Output Voltage
3	NC	No Connection
4	GND	Ground Pin
5	EXT	External Transistor Drive Pin

ABSOLUTE MAXIMUM RATINGS

Symbol	Item	Rating	Unit
V _{OUT}	V _{OUT} Pin Output Voltage	9.0	V
V _{EXT}	EXT Pin Output Voltage	-0.3~ V _{OUT} +0.3	V
V _{CE}	CE Pin Input Voltage	9.0	V
I _{EXT}	EXT Pin Output Current	±40	mA
P _D	Power Dissipation	250	mW
T _{opt}	Operating Temperature Range	-40 ~ +85	°C
T _{stg}	Storage Temperature Range	-55 ~ +125	°C

ELECTRICAL CHARACTERISTICS
