GENERAL DESCRIPTION

The UT62L2568(I) is a 2,097,152-bit low power CMOS static random access memory organized as 262,144 words by 8 bits. It is fabricated using high performance, high reliability CMOS technology.

The UT62L2568(I) is designed for very low power system applications. It is particularly well suited for battery back-up nonvolatile memory applications.

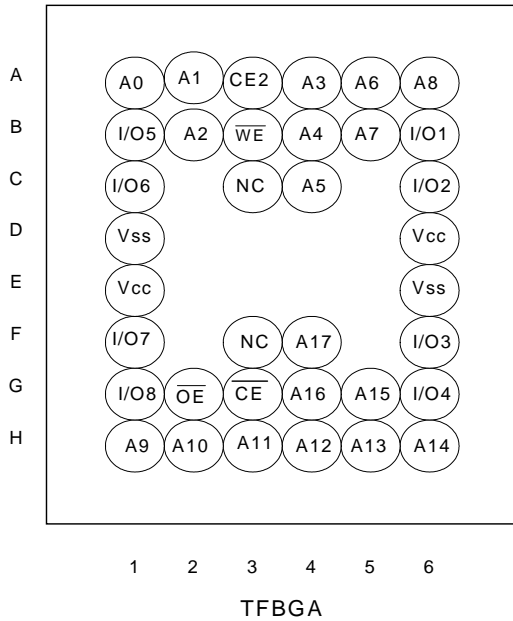

It operates from a wide range of 2.5V~ 3.6V supply voltage. Easy memory expansion is provided by using two chip enable input (CE, CE2). And all inputs and three-state outputs are fully TTL compatible.

TIMING WAVEFORMS

READ CYCLE 1 (Address Controlled) (1,2)

READ CYCLE 2 (\overline{CE} and $CE2$ and \overline{OE} Controlled) (1,3,4,5)

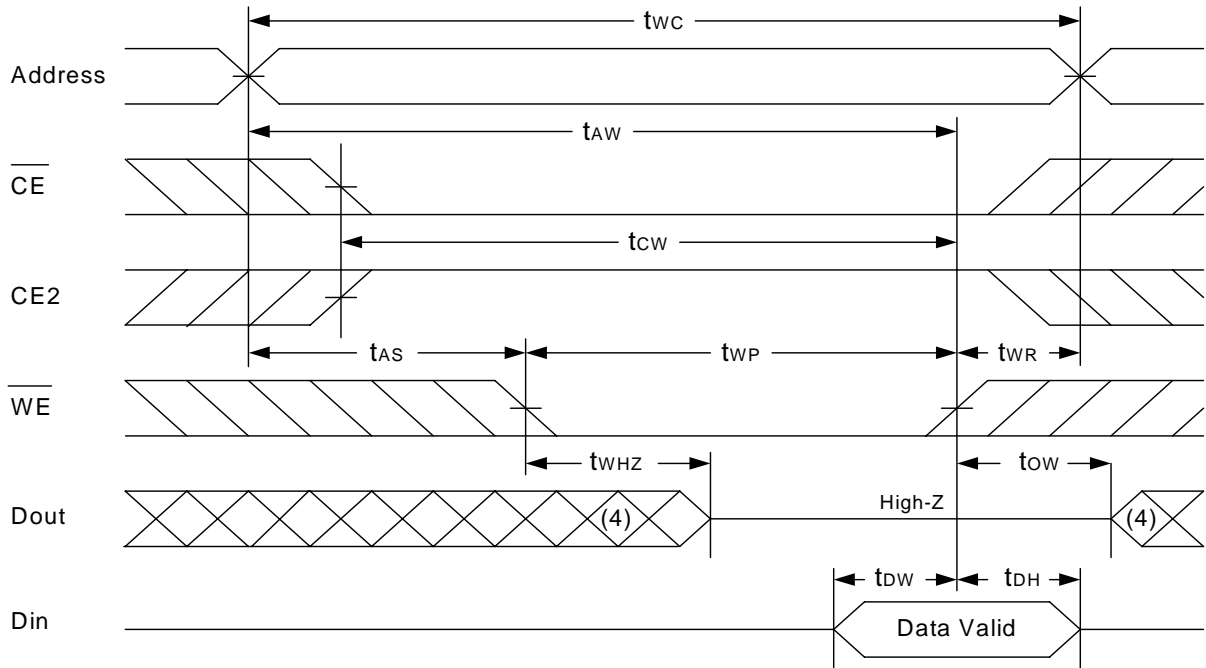

Notes :

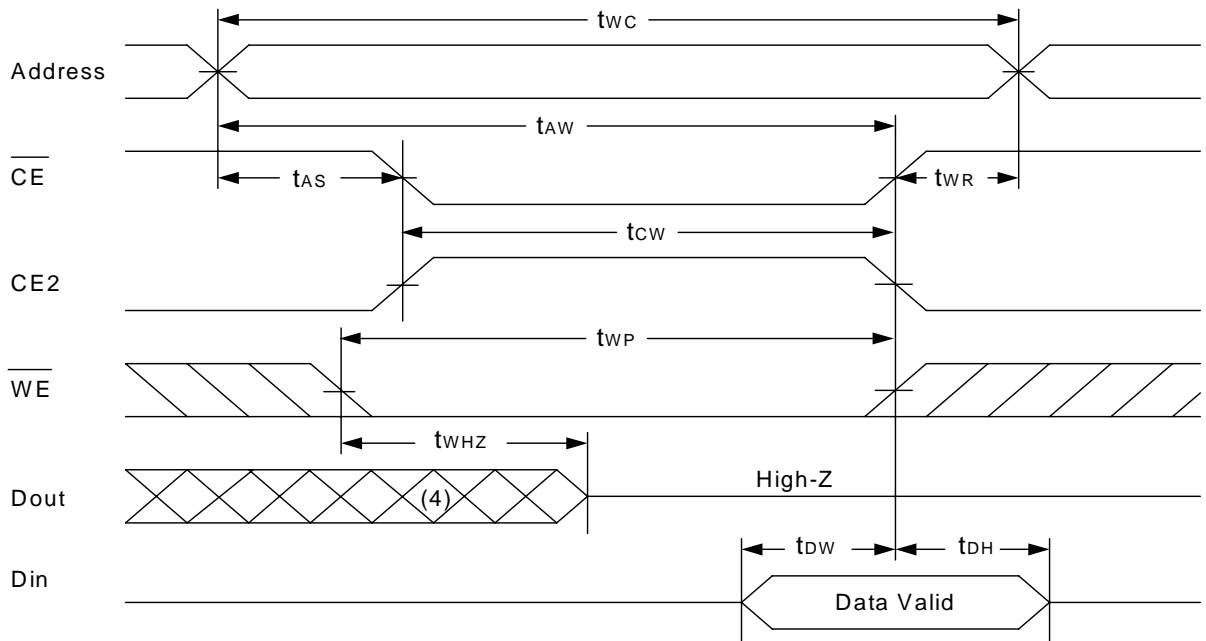

1. \overline{WE} is high for read cycle.
2. Device is continuously selected $\overline{OE} = \text{low}$, $\overline{CE} = \text{low}$, $CE2 = \text{high}$.
3. Address must be valid prior to or coincident with $\overline{CE} = \text{low}$, $CE2 = \text{high}$; otherwise t_{AA} is the limiting parameter.
4. t_{CLZ} , t_{OLZ} , t_{CHZ} and t_{OHZ} are specified with $C_L = 5\text{pF}$. Transition is measured $\pm 500\text{mV}$ from steady state.
5. At any given temperature and voltage condition, t_{CHZ} is less than t_{CLZ} , t_{OHZ} is less than t_{OLZ} .

WRITE CYCLE 1 (\overline{WE} Controlled) (1,2,3,5,6)

WRITE CYCLE 2 (\overline{CE} and $\overline{CE2}$ Controlled) (1,2,5,6)

Notes :

1. \overline{WE} , \overline{CE} must be high or $\overline{CE2}$ must be low during all address transitions.
2. A write occurs during the overlap of a low \overline{CE} , high $\overline{CE2}$, low \overline{WE} .
3. During a \overline{WE} controlled write cycle with \overline{OE} low, t_{WP} must be greater than $t_{WHZ} + t_{DW}$ to allow the drivers to turn off and data to be placed on the bus.
4. During this period, I/O pins are in the output state, and input signals must not be applied.
5. If the \overline{CE} low transition and $\overline{CE2}$ high transition occurs simultaneously with or after \overline{WE} low transition, the outputs remain in a high impedance state.
6. t_{OW} and t_{WHZ} are specified with $C_L = 5pF$. Transition is measured $\pm 500mV$ from steady state.
