

# TYPES SN54ALS1620 THRU SN54ALS1623 SN74ALS1620 THRU SN74ALS1623 OCTAL BUS TRANSCEIVERS

D2661, DECEMBER 1982—REVISED DECEMBER 1983

- Bus Transceivers in High-Density 20-Pin DIPs and the New Plastic and Ceramic Chip Carriers Packages
- Local Bus Latch Capability
- Choice of True or Inverting Logic
- Dependable Texas Instruments Quality and Reliability
- Choice of 3-State or Open-Collector Outputs

DEVICE	OUTPUT	LOGIC
'ALS1620	3-State	Inverting
'ALS1621	Open-Collector	True
'ALS1622	Open-Collector	Inverting
'ALS1623	3-State	True

## description

These octal bus transceivers are designed for asynchronous two-way communication between data buses. The control function implementation allows for maximum flexibility in timing.

These devices allow data transmission from A bus to the B bus or from the B bus to the A bus depending upon the logic levels at the enable inputs ( $\bar{G}BA$  and  $GAB$ ).

The enable inputs can be used to disable the device so that the buses are effectively isolated.

The dual-enable configuration gives the 'ALS1620 thru 'ALS1623 the capability to store data by simultaneous enabling of  $\bar{G}BA$  and  $GAB$ . Each output reinforces its input in this transceiver configuration. Thus, when both control inputs are enabled and all other data sources to the two sets of bus lines are at high impedance, both sets of bus lines (16 in all) will remain at their last states. The 8-bit codes appearing on the two sets of buses will be identical for the 'ALS1621 and 'ALS1623 or complementary for the 'ALS1620 and 'ALS1622.

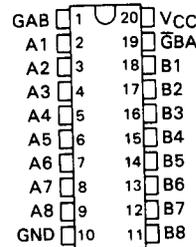

The -1 versions of the SN74ALS' parts are identical to the standard versions except that the recommended maximum  $I_{OL}$  is increased to 24 mA. There are no -1 versions of the SN54ALS' parts.

The SN54ALS1620 thru SN54ALS1623 are characterized for operation over the full military temperature range of  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ . The SN74ALS1620 thru SN74ALS1623 are characterized for operation from  $0^{\circ}\text{C}$  to  $70^{\circ}\text{C}$ .

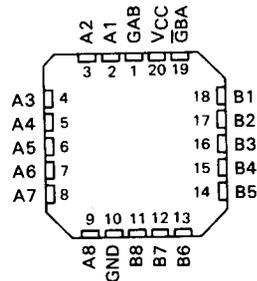

FUNCTION TABLE

ENABLE INPUTS		OPERATION	
$\bar{G}BA$	$GAB$	'ALS1620, 'ALS1622	'ALS1621, 'ALS1623
L	L	$\bar{B}$ data to A bus	B data to A bus
H	H	$\bar{A}$ data to B bus	A data to B bus
H	L	Isolation	Isolation
L	H	$\bar{B}$ data to A bus, $\bar{A}$ data to B bus	B data to A bus, A data to B bus
