M5M5V108CFP,VP,RV,KV,KR -70HI, -10HI, -70XI, -10XI

1048576-BIT(131072-WORD BY 8-BIT)CMOS STATIC RAM

DESCRIPTION

The M5M5V108CFP,VP,RV,KV,KR are a 1048576-bit CMOS static RAM organized as 131072 word by 8-bit which are fabricated using high-performance quadruple-polysilicon and double metal CMOS technology. The use of thin film transistor (TFT) load cells and CMOS periphery result in a high density and low power static RAM.

They are low standby current and low operation current and ideal for the battery back-up application.

The M5M5V108CVP,RV,KV,KR are packaged in a 32-pin thin small outline package which is a high reliability and high density surface mount device(SMD). Two types of devices are available. M5M5V108CVP,KV(normal lead bend type package), M5M5V108CRV,KR(reverse lead bend type package).Using both types of devices, it becomes very easy to design a printed circuit board.

FEATURES

Type name	Access time (max)	Vcc	Power supply current	
			Active (1MHz) (max)	stand-by (max)
M5M5V108CFP,VP,RV,KV,KR-70HI	70ns	2.7~3.6V	5mA	24µA
M5M5V108CFP,VP,RV,KV,KR-10HI	100ns			
M5M5V108CFP,VP,RV,KV,KR-70XI	70ns			9.6µA
M5M5V108CFP,VP,RV,KV,KR-10XI	100ns			

- Low stand-by current 0.1µA (typ.)
- Directly TTL compatible : All inputs and outputs
- Easy memory expansion and power down by $\overline{S}_1$,S_2
- Data hold on +2V power supply
- Three-state outputs : OR - tie capability
- $\overline{OE}$ prevents data contention in the I/O bus
- Common data I/O
- Package

  M5M5V108CFP ·····32pin 525mil SOP
  M5M5V108CVP,RV ·····32pin 8 X 20 mm^2 TSOP
  M5M5V108CKV,KR ·····32pin 8 X 13.4 mm^2 TSOP

APPLICATION

Small capacity memory units

NC : NO CONNECTION

FUNCTION

The operation mode of the M5M5V108C series are determined by a combination of the device control inputs $\overline{S}_1$,S_2,$\overline{W}$ and $\overline{OE}$.

Each mode is summarized in the function table.

A write cycle is executed whenever the low level $\overline{W}$ overlaps with the low level $\overline{S}_1$ and the high level S_2. The address must be set up before the write cycle and must be stable during the entire cycle. The data is latched into a cell on the trailing edge of $\overline{W}$,$\overline{S}_1$ or S_2, whichever occurs first,requiring the set-up and hold time relative to these edge to be maintained. The output enable input $\overline{OE}$ directly controls the output stage. Setting the $\overline{OE}$ at a high level, the output stage is in a high-impedance state, and the data bus contention problem in the write cycle is eliminated.

A read cycle is executed by setting $\overline{W}$ at a high level and $\overline{OE}$ at a low level while $\overline{S}_1$ and S_2 are in an active state($\overline{S}_1$=L,S_2=H).

When setting $\overline{S}_1$ at a high level or S_2 at a low level, the chip are in a non-selectable mode in which both reading and writing are disabled. In this mode, the output stage is in a high- impedance state, allowing OR-tie with other chips and memory expansion by $\overline{S}_1$ and S_2. The power supply current is reduced as low as the stand-by current which is specified as I_{CC3} or I_{CC4}, and the memory data can be held at +2V power supply, enabling battery back-up operation during power failure or power-down operation in the non-selected mode.

FUNCTION TABLE

$\overline{S}_1$	S_2	$\overline{W}$	$\overline{OE}$	Mode	DQ	I_{CC}
X	L	X	X	Non selection	High-impedance	Stand-by
H	X	X	X	Non selection	High-impedance	Stand-by
L	H	L	X	Write	Din	Active
L	H	H	L	Read	Dout	Active
L	H	H	H		High-impedance	Active

(2) READ CYCLE

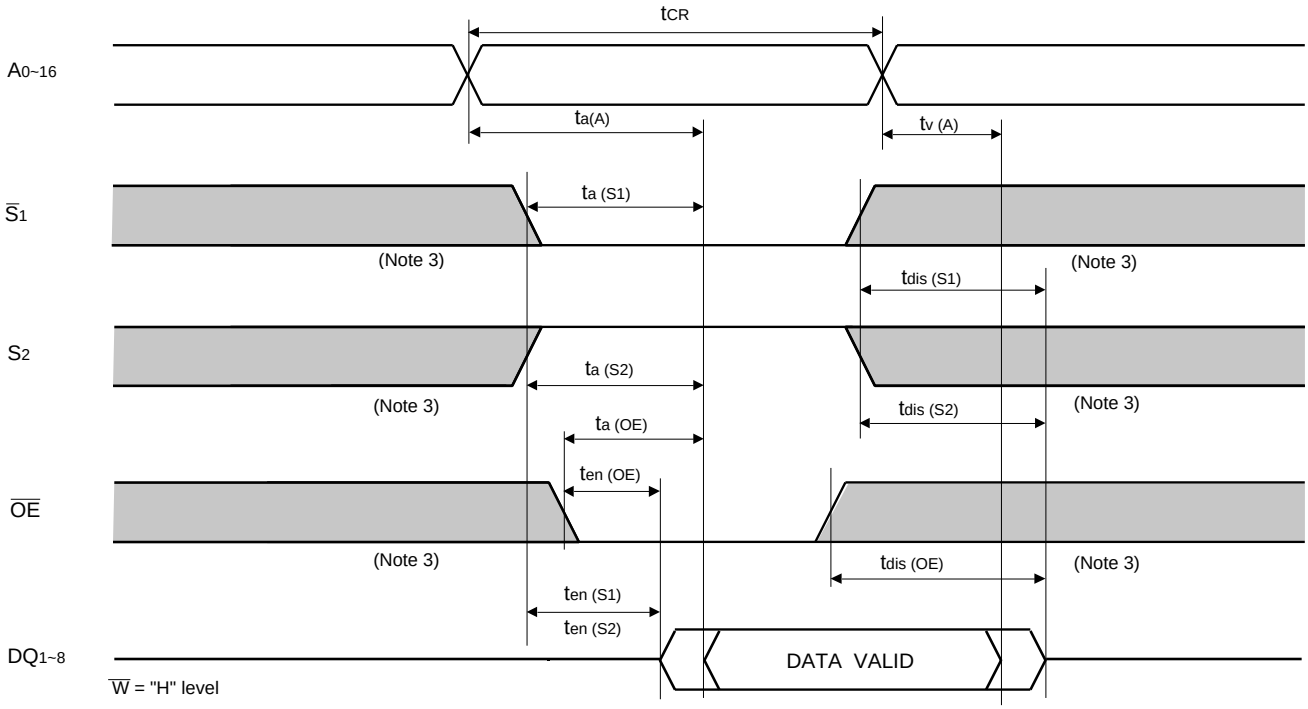
Symbol	Parameter	Limits				Unit
		-70HI,-70XI		-10HI,-10XI		
		Min	Max	Min	Max	
t_{CR}	Read cycle time	70		100		ns
$t_{a(A)}$	Address access time		70		100	ns
$t_{a(S1)}$	Chip select 1 access time		70		100	ns
$t_{a(S2)}$	Chip select 2 access time		70		100	ns
$t_{a(OE)}$	Output enable access time		35		50	ns
$t_{dis(S1)}$	Output disable time after $\overline{S}_1$ high		25		35	ns
$t_{dis(S2)}$	Output disable time after S_2 low		25		35	ns
$t_{dis(OE)}$	Output disable time after $\overline{OE}$ high		25		35	ns
$t_{en(S1)}$	Output enable time after $\overline{S}_1$ low	10		10		ns
$t_{en(S2)}$	Output enable time after S_2 high	10		10		ns
$t_{en(OE)}$	Output enable time after $\overline{OE}$ low	5		5		ns
$t_{V(A)}$	Data valid time after address	10		10		ns

(3) WRITE CYCLE

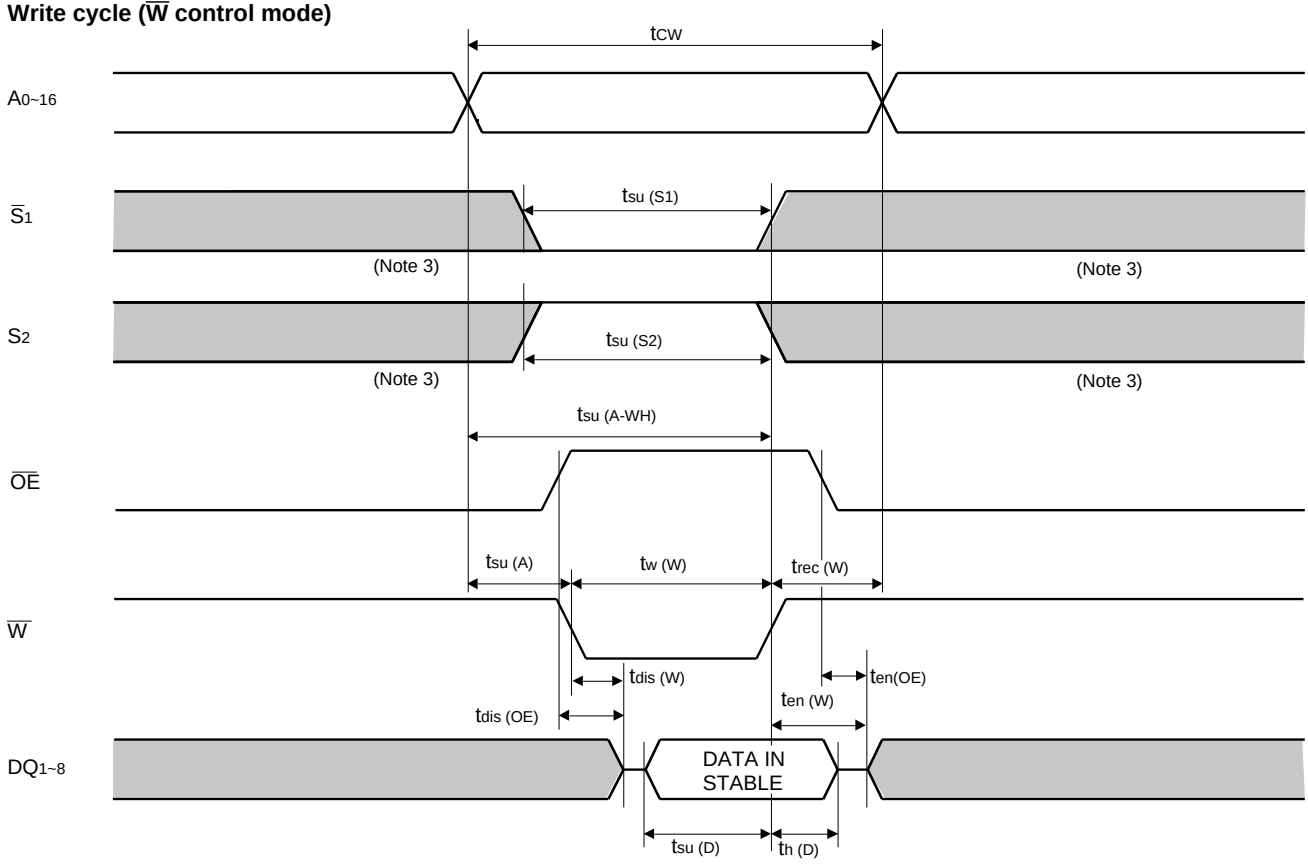
Symbol	Parameter	Limits				Unit
		-70HI,-70XI		-10HI,-10XI		
		Min	Max	Min	Max	
t_{CW}	Write cycle time	70		100		ns
$t_{w(W)}$	Write pulse width	55		75		ns
$t_{su(A)}$	Address setup time	0		0		ns
$t_{su(A-WH)}$	Address setup time with respect to $\overline{W}$	65		85		ns
$t_{su(S1)}$	Chip select 1 setup time	65		85		ns
$t_{su(S2)}$	Chip select 2 setup time	65		85		ns
$t_{su(D)}$	Data setup time	30		40		ns
$t_{h(D)}$	Data hold time	0		0		ns
$t_{rec(W)}$	Write recovery time	0		0		ns
$t_{dis(W)}$	Output disable time from $\overline{W}$ low		25		35	ns
$t_{dis(OE)}$	Output disable time from $\overline{OE}$ high		25		35	ns
$t_{en(W)}$	Output enable time from $\overline{W}$ high	5		5		ns
$t_{en(OE)}$	Output enable time from $\overline{OE}$ low	5		5		ns

(4) TIMING DIAGRAMS

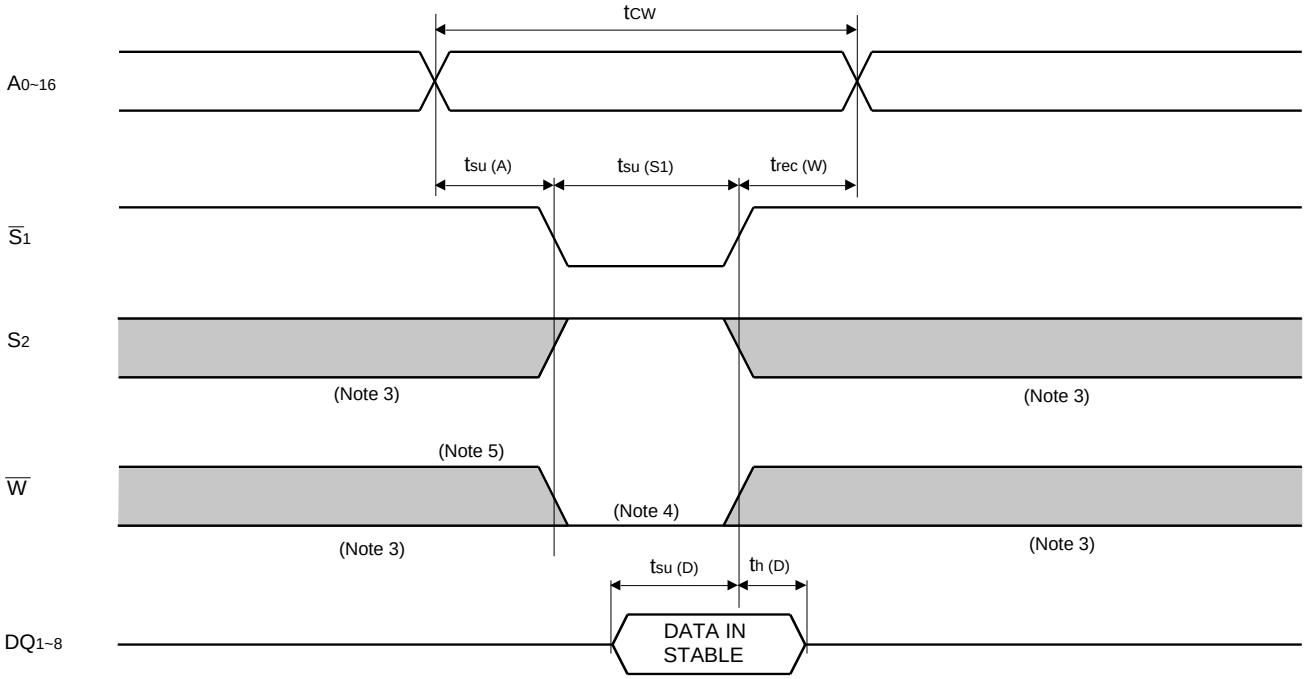
Read cycle



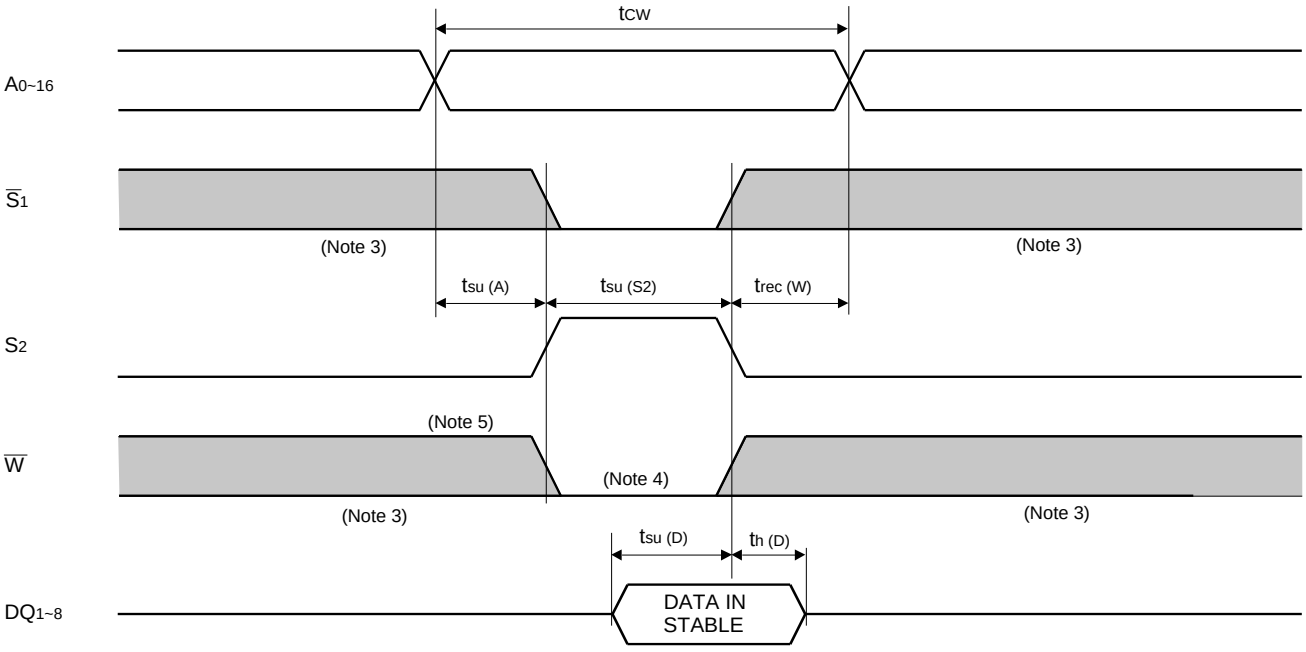
Write cycle (W control mode)



Write cycle ($\overline{S}_1$ control mode)



Write cycle (S_2 control mode)



Note 3: Hatching indicates the state is "don't care".
4: Writing is executed while S_2 high overlaps $\overline{S}_1$ and $\overline{W}$ low.
5: When the falling edge of $\overline{W}$ is simultaneously or prior to the falling edge of $\overline{S}_1$ or rising edge of S_2, the outputs are maintained in the high impedance state.
6: Don't apply inverted phase signal externally when DQ pin is output mode.

POWER DOWN CHARACTERISTICS

(1) ELECTRICAL CHARACTERISTICS (Ta=– 40~85°C, unless otherwise noted)

Symbol	Parameter	Test conditions			Limits			Unit
					Min	Typ	Max	
$V_{CC\ (PD)}$	Power down supply voltage				2			V
$V_{I\ (S1)}$	Chip select input $\overline{S}_1$				2.0	Vcc(PD)		V

Keep safety first in your circuit designs!

Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

These materials are intended as a reference to assist our customers in the selection of the Mitsubishi semiconductor product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Mitsubishi Electric Corporation or a third party.

Mitsubishi Electric Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.

All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Mitsubishi Electric Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for the latest product information before purchasing a product listed herein.

The information described here may contain technical inaccuracies or typographical errors. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.
Please also pay attention to information published by Mitsubishi Electric Corporation by various means, including the Mitsubishi Semiconductor home page (http://www.mitsubishichips.com).

When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.

Mitsubishi Electric Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.

The prior written approval of Mitsubishi Electric Corporation is necessary to reprint or reproduce in whole or in part these materials.

If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.
Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.

Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for further details on these materials or the products contained therein.
