MULTICHANNEL EIA-232 DRIVER/RECEIVER  
WITH CHARGE PUMP

SLLS130B - D3881, SEPTEMBER 1991 - REVISED JANUARY 1993

- Single IC and Single 5-V Supply Interface for Serial Communication Ports
- Three EIA/TIA-E Drivers and Five Receivers Meet EIA/TIA-232-E-1991, EIA/TIA-562, and CCITT Recommendation V.28 Standards
- Switched-Capacitor Voltage Converter Eliminates Need for  $\pm 12\text{-V}$  Supplies
- Voltage Converter Operates With Low Capacitance . . .  $0.1 \mu\text{F}$  Min
- ESD Protection on RS-232 Lines Exceeds 6 kV Per MIL-STD-883C, Method 3015
- Designed for Data Rates up to 120 kb/s Over 3-m Cable
- Available in Shrink Small-Outline 25-mil-Pitch Package
- Shutdown Mode to Save Power When Not in Use
- $\pm 30\text{-V}$  Receiver Input Voltage Range
- LinBiCMOS™ Process Technology
- Applications
  - Laptop or Notebook Computers
  - Portable Terminals
  - Single-Board Computers
  - Portable Test Equipment

### description

The SN75LBC187 is a low-power LinBiCMOS™ device containing three independent drivers, five receivers, and a switched-capacitor voltage converter. The SN75LBC187 provides a single integrated circuit (IC) and single 5-V supply interface between the asynchronous communications element and the serial port connector of the data terminal equipment (DTE). This device has been designed to conform to standards EIA/TIA-232-E-1991, EIA/TIA-562, and CCITT recommendation V.28.

The switched-capacitor voltage converter of the SN75LBC187 uses four small external capacitors to generate the positive and negative voltages required by EIA-232 (and V.28) line drivers from a single 5-V input. The drivers feature output slew-rate limiting to eliminate the need for external filter capacitors. The receivers can accept  $\pm 30\text{ V}$  without damage. The device also features a reduced power or shutdown mode that cuts the quiescent power to the IC when not transmitting data between the CPU and peripheral.

The SN75LBC187 has been designed using LinBiCMOS™ technology and cells contained in the Texas Instruments LinASIC™ library. The SN75LBC187 is characterized for operation from 0°C to 70°C.

NOTE: This device includes circuit designs and process technologies that have patents pending.

NOTES: 2. The 200 ns for the output to change from  $-3 \text{ V}$  to  $3 \text{ V}$  (or vice versa) corresponds to the  $30 \text{ V}/\mu\text{s}$  maximum slew rate of EIA/TIA-232-E, EIA/TIA-562, and CCITT V.28.

3. The more stringent requirement for transition times comes from the EIA/TIA-562, which requires the rise and fall times to be measured from  $3.3 \text{ V}$ .
