INCH-POUND MIL-M-38510/309E <u>10 April 2003</u> SUPERSEDING MIL-M-38510/309D 21 June 1985

MILITARY SPECIFICATION

MICROCIRCUITS, DIGITAL, BIPOLAR, LOW-POWER SCHOTTKY TTL, DATA SELECTOR/MULTIPLEXER WITH THREE-STATE OUTPUTS, MONOLITHIC SILICON

Inactive for new design after 18 April 1997.

This specification is approved for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 <u>Scope.</u> This specification covers the detail requirements for monolithic silicon, low-power Schottky TTL, data selector/multiplexer (three-state) logic microcircuits. Two product assurance classes and a choice of case outlines and lead finishes are provided for each type and are reflected in the complete part number. For this product, the requirements of MIL-M-38510 have been superseded by MIL-PRF-38535, (see 6.3).

1.2 Part number. The part number should be in accordance with MIL-PRF-38535, and as specified herein.

1.2.1 <u>Device types.</u> The device types should be as follows:

| Device type | <u>Circuit</u> |
|-------------|---|
| 01 | Eight-input data selector/multiplexer, with enable |
| 02 | Dual, four-input data selector/multiplexer, with enable |
| 03, 04 | Quad, two-input data selector/multiplexer, with enable |
| 05 | Eight-input data selector/multiplexer, 3-state outputs with enable |
| 06, 07 | Quad, two-input data selector/multiplexer, 3-state outputs with enable |
| 08 | Dual, four-input data selector/multiplexer, 3-state outputs with enable |
| 09 | Cascadable, quad, two-input data selector/multiplexer, with storage |

1.2.2 Device class. The device class should be the product assurance level as defined in MIL-PRF-38535.

1.2.3 Case outlines. The case outlines should be as designated in MIL-STD-1835 and as follows:

| Outline letter | Descriptive designator | <u>Terminals</u> | Package style |
|----------------|------------------------|------------------|------------------------------|
| Е | GDIP1-T16 or CDIP2-T16 | 16 | Dual-in-line |
| F | GDFP2-F16 or CDFP3-F16 | 16 | Flat pack |
| Х | CQCC2-N20 | 20 | Square leadless chip carrier |
| 2 | CQCC1-N20 | 20 | Square leadless chip carrier |

Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Commander, Defense Supply Center Columbus, ATTN: DSCC-VAS, P. O. Box 3990, Columbus, OH 43216-5000, by using the self addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

AMSC N/A

DISTRIBUTION STATEMENT A. Approved for public release; distribution is unlimited.

 $[\]overline{\underline{1/}}$ Must withstand the added P_D due to short-circuit test (e.g., I_{OS}). $\underline{2/}$ Maximum junction temperature shall not be exceeded except for allowable short duration burn-in screening conditions in accordance with MIL-PRF-38535.

^{3/} Device will fanout in both high and low levels to the specified number of data inputs on the same device type as that being tested.

2. APPLICABLE DOCUMENTS

2.1 Government documents.

2.1.1 Specifications and Standards. The following specifications and standards form a part of this specification to the extent specified herein. Unless otherwise specified, the issues of these documents shall be those listed in the issue of the Departments of Defense Index of Specifications and Standards (DODISS) and supplement thereto, cited in the solicitation.

SPECIFICATION

DEPARTMENT OF DEFENSE

MIL-PRF-38535 -Integrated Circuits (Microcircuits) Manufacturing, General Specification for.

STANDARDS

DEPARTMENT OF DEFENSE

| MIL-STD-883 | - | Test Method Standard for Microelectronics. |
|--------------|---|---|
| MIL-STD-1835 | - | Interface Standard Electronic Component Case Outlines |

(Unless otherwise indicated, copies of the above specifications and standards are available from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094.)

2.2 Order of precedence. In the event of a conflict between the text of this specification and the references cited herein, the text of this document takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 Qualification. Microcircuits furnished under this specification shall be products that are manufactured by a manufacturer authorized by the qualifying activity for listing on the applicable qualified manufacturers list before contract award (see 4.3 and 6.4).

3.2 Item requirements. The individual item requirements shall be in accordance with MIL-PRF-38535 and as specified herein or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not affect the form, fit, or function as described herein.

3.3 Design, construction, and physical dimensions. The design, construction, and physical dimensions shall be as specified in MIL-PRF-38535 and herein.

3.3.1 Terminal connections. The terminal connections shall be as specified on figure 1.

3.3.2 Logic diagrams. The logic diagrams shall be specified on figure 2.

3.3.3 <u>Truth tables.</u> The truth tables shall be as specified on figure 3.

3.3.4 <u>Schematic circuits</u>. The schematic circuits shall be maintained by the manufacturer and made available to the qualifying activity and the preparing activity upon request.

3.3.5 Case outlines. The case outlines shall be as specified in 1.2.3.

3.4 Lead material and finish. The lead material and finish shall be in accordance with MIL-PRF-38535 (see 6.6).

3.5 <u>Electrical performance characteristics</u>. The electrical performance characteristics are as specified in table I, and apply over the full recommended case operating temperature range, unless otherwise specified.

3.6 <u>Electrical test requirements.</u> The electrical test requirements for each device class shall be the subgroups specified in table II. The electrical tests for each subgroup are described in table III.

3.7 Marking. Marking shall be in accordance with MIL-PRF-38535.

3.8 <u>Microcircuit group assignment</u>. The devices covered by this specification shall be in microcircuit group number 11 (see MIL-PRF-38535, appendix A).

4. VERIFICATION

4.1 <u>Sampling and inspection</u>. Sampling and inspection procedures shall be in accordance with MIL-PRF-38535 or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not effect the form, fit, or function as described herein.

4.2 <u>Screening</u>. Screening shall be in accordance with MIL-PRF-38535 and shall be conducted on all devices prior to qualification and quality conformance inspection. The following additional criteria shall apply:

- a. The burn-in test duration, test condition, and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The burn-in test circuit shall be maintained under document control by the device manufacturer's Technology Review Board (TRB) in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in test method 1015 of MIL-STD-883.
- b. Interim and final electrical test parameters shall be as specified in table II, except interim electrical parameters test prior to burn-in is optional at the discretion of the manufacturer.
- c. Additional screening for space level product shall be as specified in MIL-PRF-38535, appendix B.

4.3 <u>Qualification inspection</u>. Qualification inspection shall be in accordance with MIL-PRF-38535.

4.4 <u>Technology Conformance inspection (TCI)</u>. Technology conformance inspection shall be in accordance with MIL-PRF-38535 and herein for groups A, B, C, and D inspections (see 4.4.1 through 4.4.4).

4.4.1 Group A inspection. Group A inspection shall be in accordance with table III of MIL-PRF-38535 and as follows:

- a. Tests shall be as specified in table II herein.
- b. Subgroups 4, 5, and 6 shall be omitted.

4.4.2 Group B inspection. Group B inspection shall be in accordance with table II MIL-PRF-38535.

TABLE II. Electrical test requirements.

*PDA applies to subgroup 1.

4.4.3 <u>Group C inspection</u>. Group C inspection shall be in accordance with table IV of MIL-PRF-38535 and as follows:

- a. End-point electrical parameters shall be as specified in table II herein.
- b. The steady-state life test duration, test condition, and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The burn-in test circuit shall be maintained under document control by the device manufacturer's Technology Review Board (TRB) in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in test method 1005 of MIL-STD-883.

4.4.4 <u>Group D inspection</u>. Group D inspection shall be in accordance with table V of MIL-PRF-38535. End-point electrical parameters shall be as specified in table II herein.

4.5 <u>Methods of inspection</u>. Methods of inspection shall be specified and as follows:

4.5.1 <u>Voltage and current.</u> All voltages given are referenced to the microcircuit ground terminal. Currents given are conventional and positive when flowing into the referenced terminal.

| Х | Н | Q _{A0} | Q _{B0} | Q _{C0} | Q_{D0} |

Device type 09

H = high level (steady state)

L = low level (steady state)

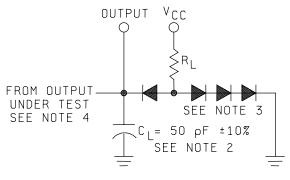

X = irrelevant (any input, including transitions)

 \downarrow = transition from high to low level

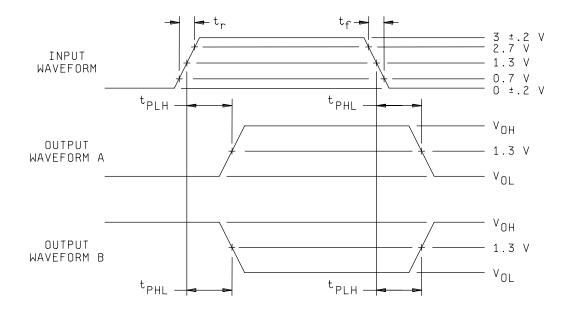

a1, a2, etc. = the level of steady state input at A1, A2, etc. Q_{A0} , Q_{B0} , etc. = the level of Q_A , Q_B etc, entered on the

most recent \downarrow transition of the clock input.

FIGURE 3. Truth tables - Continued.

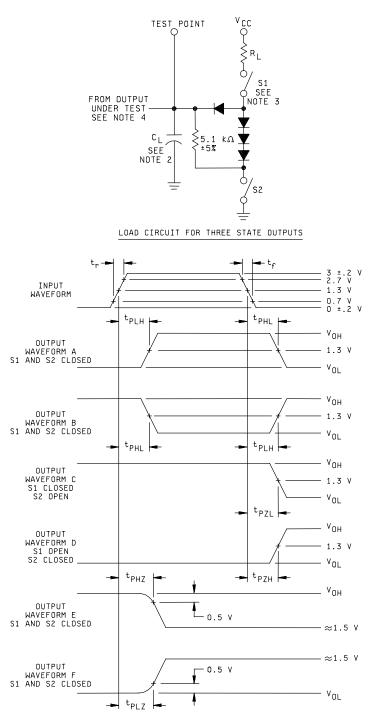

LOAD FOR OUTPUT UNDER TEST

NOTES:

- 1. Input pulse characteristics: PRR \leq 1.0 MHz, $t_r \leq$ 15 ns, $t_f \leq$ 6 ns.
- 2. $C_L = 50 \text{ pF} \pm 10\%$ including probe and jig capacitance.
- 3. $R_L = 2.0 \text{ k}\Omega \pm 5\%$. All diodes are 1N3064 or 1N916.
- 4. Load circuit on a given output is only required where the specific test in table III indicates "OUT" on that output.

FIGURE 4. Switching test for device types 01, 02, 03, and 04.

NOTES:

- 1. Input pulse characteristics: PRR \leq 1.0 MHz, $t_r \leq$ 15 ns, $t_f \leq$ 6 ns.
- 2. $C_L = 50 \text{ pF} \pm 10\%$ for t_{PLH} , t_{PHL} , t_{PZL} , and t_{PZH} tests; $C_L = 15 \text{ pF}$ minimum for t_{PHZ} , and t_{PLZ} tests. C_L includes probe and jig capacitance.
- 3. All diodes are 1N3064 or 1N916. R_L = 2.0 k Ω ±5% for device types 05 and 08, and R_L = 680 Ω ±5% for device types 06 and 07.
- 4. Load circuit on a given output is only required where the specific test in table III indicates "OUT" on that output.

FIGURE 4. Switching test for device types 05, 06, 07, 08 - Continued.

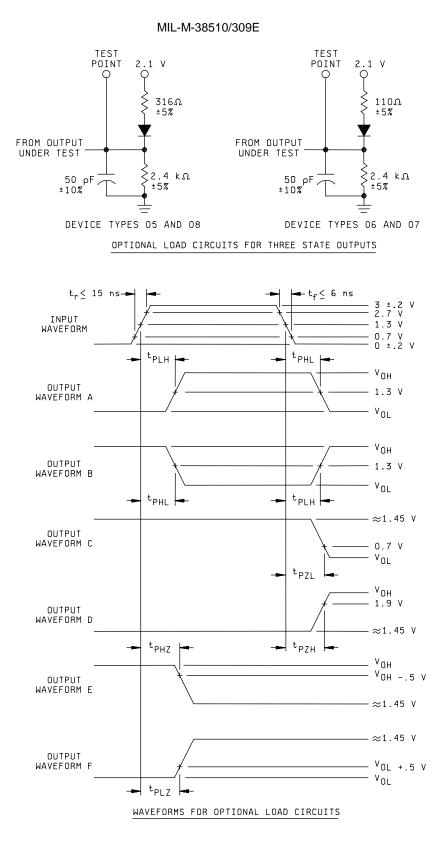

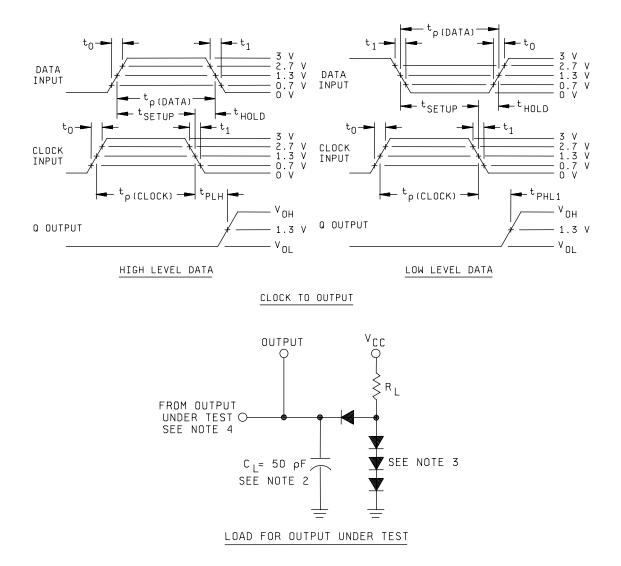

FIGURE 4. Switching test for device types 05, 06, 07, 08 - Continued.

NOTES:

- 1. Input pulse characteristics: PRR \leq 1.0 MHz, t₀ \leq 15 ns, t₁ \leq 6 ns, t_P(data) = 20 ns, t_P(clock) = 20 ns, t_{SETUP} = 15 ns, and t_{HOLD} = 5 ns.
- 2. $C_L = 50 \text{ pF} \pm 10\%$ including probe and jig capacitance.
- 3. $R_L = 2.0 \text{ k}\Omega \pm 5\%$. All diodes are 1N3064 or equivalent.
- 4. Load circuit on a given output is only required where the specific test in table III indicates "OUT" on that output.

FIGURE 4. Switching test for device type 09 - Continued.

Terminal conditions (pips not designated may be high ≥ 2.0 V: low ≤ 0.7 V: or open).

1/ Case X and 2 pins not referenced are NC.

 $\underline{2}/~I_{\text{IL}}$ limits shall be as follows:

| | | | Min/Ma | ax limits (mA) fo | r circuits | | |
|------------------|--|-------|--------|-------------------|--|-------|------|
| Test | Α | В | С | D | E | F | G |
| I _{IL1} | 18 through 27 12/36 except test 28 and 17 001/15 | 12/36 | 12/36 | 03/30 | Test 18 and 27 12/36 Test 17 and 28 16/40 Tests 19 through 26 16/40 | 12/36 | 0/15 |

45

 $\underline{3}/~I_{OS}$ limits for circuits B, D, E, F, and G are -15 to -100 mA.

 $\label{eq:alpha} \underline{4} / \mbox{ Inputs: } A \geq 2.4 \mbox{ V minimum, } B \leq 0.4 \mbox{ V maximum.} \\ Outputs: \mbox{ Output voltages shall be either:}$

a. H = 2.5 volts minimum and L = 0.4 volt maximum when using a high speed checker double comparator, or

b. H \geq 1.5 volts and L \leq 1.5 volts when using a high speed checker single comparator.

c. Attributes data only is required for subgroups 7 and 8.

TABLE III. Group A inspection for device type 09 - Continued. Terminal conditions (pins not designated may be high > 2.0 V· low < 0.7 V· or open).

 $\underline{1}/$ Case X and 2 pins not referenced are NC. $\underline{2}/$ Apply normal clock pulse. $\underline{3}/$ I_{IL} limits shall be as follows:

47

| | | | Min/Max I | imits (mA) for circui | its | | |
|------------------|-------|---|-----------|--|--|-------|---|
| Test | А | В | С | D | E | F | G |
| I _{IL1} | 16/40 | - | - | 16/40 except 03/30 test 27 and 28 | 16/40 except 12/36 test 27 and 28 | 12/36 | - |

5. PACKAGING

5.1 <u>Packaging requirements.</u> For acquisition purposes, the packaging requirements shall be as specified in the contract or order (see 6.2). When actual packaging of materiel is to be performed by DoD personnel, these personnel need to contact the responsible packaging activity to ascertain requisite packaging requirements. Packaging requirements are maintained by the Inventory Control Point's packaging activity within the Military Department of Defense Agency, or within the Military Department's System Command. Packaging data retrieval is available from the managing Military Department's or Defense Agency's automated packaging files, CD-ROM products, or by contacting the responsible packaging activity.

6. NOTES

6.1 <u>Intended use.</u> Microcircuits conforming to this specification are intended for original equipment design applications and logistic support of existing equipment.

- 6.2 Acquisition requirements. Acquisition documents should specify the following:
 - a. Title, number, and date of the specification.
 - b. Complete part number (see 1.2).
 - c. Requirements for delivery of one copy of the quality conformance inspection data pertinent to the device inspection lot to be supplied with each shipment by the device manufacturer, if applicable.
 - d. Requirements for certificate of compliance, if applicable.
 - e. Requirements for notification of change of product or process to contracting activity in addition to notification to the qualifying activity, if applicable.
 - f. Requirements for failure analysis (including required test condition of method 5003 of MIL-STD-883), corrective action, and reporting of results, if applicable.
 - g. Requirements for product assurance options.
 - Requirements for special carriers, lead lengths, or lead forming, if applicable. These requirements should not affect the part number. Unless otherwise specified, these requirements will not apply to direct purchase by or direct shipment to the Government.
 - j. Requirements for "JAN" marking.

6.3 <u>Superseding information</u>. The requirements of MIL-M-38510 have been superseded to take advantage of the available Qualified Manufacturer Listing (QML) system provided by MIL-PRF-38535. Previous references to MIL-M-38510 in this document have been replaced by appropriate references to MIL-PRF-38535. All technical requirements now consist of this specification and MIL-PRF-38535. The MIL-M-38510 specification sheet number and PIN have been retained to avoid adversely impacting existing government logistics systems and contractor's parts lists.

6.4 <u>Qualification</u>. With respect to products requiring qualification, awards will be made only for products which are, at the time of award of contract, qualified for inclusion in Qualified Manufacturers List QML-38535 whether or not such products have actually been so listed by that date. The attention of the contractors is called to these requirements, and manufacturers are urged to arrange to have the products that they propose to offer to the Federal Government tested for qualification in order that they may be eligible to be awarded contracts or purchase orders for the products covered by this specification. Information pertaining to qualification of products may be obtained from DSCC-VQ, 3990 E. Broad Street, Columbus, Ohio 43123-1199.

6.5 <u>Abbreviations, symbols, and definitions.</u> The abbreviations, symbols, and definitions used herein are defined in MIL-PRF-38535, MIL-HDBK-1331, and as follows:

| V _{IC} | Voltage level at an input terminal. Input clamp voltage. |
|------------------|--|
| l _{IN} | |
| t _{PHZ} | Output disable time (of a three-state output) from high level. The time between the specified reference points on the input and output voltage waveforms with the three-state output changing from the defined high level to a high-impedance (off) state. |
| t _{PLZ} | Output disable time (of a three-state output) from low level. The time between the specified reference points on the input and output voltage waveforms with the three-state output changing from the defined low level to a high-impedance (off) state. |
| t _{PZH} | Output enable time (of a three-state output) to high level. |
| t _{PZL} | The time between the specified reference points on the input and output voltage waveforms with the three-state output changing from a high-impedance (off) state to the defined low level. Output enable time (of a three-state output) to low level. The time between the specified reference points on the input and output voltage waveforms with the three-state output changing from a high-impedance (off) state to the defined low level. |

6.6 <u>Logistic support</u>. Lead materials and finishes (see 3.4) are interchangeable. Unless otherwise specified, microcircuits acquired for Government logistic support will be acquired to device class B (see 1.2.2), lead material and finish A (see 3.4). Longer length leads and lead forming should not affect the part number.

6.7 <u>Substitutability.</u> The cross-reference information below is presented for the convenience of users. Microcircuits covered by this specification will functionally replace the listed generic-industry type. Generic-industry microcircuit types may not have equivalent operational performance characteristics across military temperature ranges or reliability factors equivalent to MIL-M-38510 device types and may have slight physical variations in relation to case size. The presence of this information should not be deemed as permitting substitution of generic-industry types for MIL-M-38510 types or as a waiver of any of the provisions of MIL-PRF-38535.

| Military device type | Generic-industry type |
|-------------------------|--------------------------|
