CD54/74ACT139

The RCA CD54/74AC139 and CD54/74ACT139 dual 2-to-4-line decoders/demultiplexers use the RCA ADVANCED CMOS technology. These devices contain two independent binary to one-of-four decoders, each with a single active-LOW enable input (\bar{E} or $\bar{2E}$). Data on the select inputs (A10 and A11 or A20 and A21) cause one of the four normally HIGH outputs to go LOW.

If the enable input is HIGH, all four outputs remain HIGH. For demultiplexer operation, the enable input is the data input. The enable input also functions as a chip select when these devices are cascaded.

The CD74AC139 and CD74ACT139 are supplied in 16-lead dual-in-line plastic packages (E suffix) and in 16-lead dual-in-line small-outline plastic packages (M suffix). Both package types are operable over the following temperature ranges: Commercial (0 to 70°C); Industrial (-40 to +85°C); and Extended Industrial/Military (-55 to +125°C).

The CD54AC139 and CD54ACT139, available in chip form (H suffix), are operable over the -55 to +125°C temperature range.
