# HIGH-SPEED CMOS NON-INVERTING BUFFER TRANSCEIVER

IDT54AHCT645

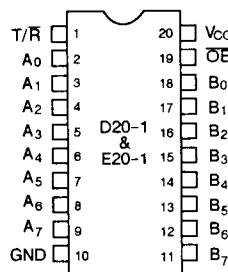

## FEATURES:

- Equivalent to ALS speeds and output drive over full temperature and voltage supply extremes
- 8ns typical data to output delay
- $I_{OL} = 14\text{mA}$  over full military temperature range
- CMOS power levels (5 $\mu\text{W}$  typ. static)
- Both CMOS and TTL output compatible
- Substantially lower input current levels than ALS (5 $\mu\text{A}$  max.)
- Non-inverting buffer transceiver
- JEDEC standard pinout for DIP and LCC
- Military product compliant to MIL-STD-883, Class B

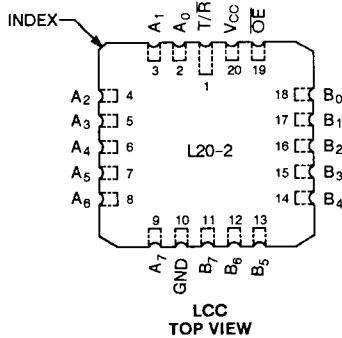

## DESCRIPTION:

The IDT54AHCT645 are 8-bit non-inverting buffer transceivers built using advanced CEMOS™, a dual metal CMOS technology. These non-inverting buffer transceivers are designed for asynchronous two-way communication between data buses. The devices transmit data from the A bus to the B bus or from the B bus to the A bus, depending upon the I/V4level at the direction control (T/R) input. The enable input ( $\overline{OE}$ ) can be used to disable the device so the buses are effectively isolated.
