

**Precision, Dual-Supply Analog Switches**
**Features**

- Low On-Resistance ( $17\Omega$  typ) Minimizes Distortion and Error Voltages
- Low Glitching Reduces Step Errors in Sample-and-Holds. Charge Injection, 2 pC typ
- Split-Supply Operation ( $\pm 3V$  to  $\pm 8V$ )
- Improved Second Sources for MAX320/MAX321/MAX322
- On-Resistance Matching Between Channels,  $0.2\ \Omega$  typ
- On-Resistance Flatness,  $<2\Omega$  typ
- Low Off-Channel Leakage,  $<5nA$  @  $+85^\circ C$
- TTL/CMOS Logic Compatible
- Fast Switching Speed,  $t_{ON} < 150$  ns
- Guaranteed Break-Before-Make action (PS322) eliminates momentary crosstalk
- Rail-to-Rail Analog Signal Dynamic Range
- Low Power Consumption,  $<1.25mW$
- MSOP Package Minimizes Board Area

**Applications**

- Audio Switching and Routing
- Portable Instruments
- Data Acquisition Systems
- Sample-and-Holds
- Telecommunication Systems
- Battery-Powered Systems

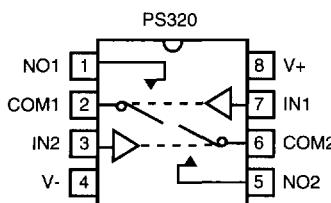

**Description**

The PS320/PS321/PS322 are improved high precision, medium voltage analog switches designed to operate with  $\pm 3V$  to  $\pm 8V$  power supplies.

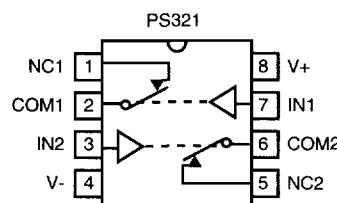

The PS320 is a dual, single-pole single-throw (SPST), normally open (NO) switch. The PS321 has the same pinout as the PS320 but it has two normally closed (NC) switches. The PS322 has one normally open (NO) and one normally closed (NC) switch per package. Each switch conducts current equally well in either direction when on. In the off state each switch blocks voltages up to the power-supply rails.

With  $\pm 5V$  power supplies, the PS320/PS321/PS322 guarantee  $<35\Omega$  on-resistance. On-resistance matching between channels is within  $2\Omega$ . On-resistance flatness is less than  $4\Omega$  over the specified range. All three devices guarantee low leakage currents ( $<100\ pA$  @  $25^\circ C$ ,  $<10nA$  @  $+85^\circ C$ ) and fast switching speeds ( $t_{ON} < 150$ ns). Break-before-make switching action protects against momentary crosstalk (PS322).

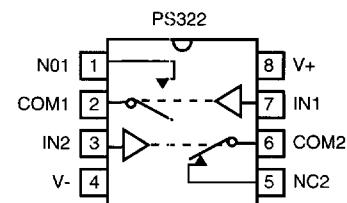

For single-supply operation the PS323/PS324/PS325 are recommended.

**Absolute Maximum Ratings**

Voltages Referenced to V-	
V+ .....	-0.3V to +17V
V <sub>IN</sub> , V <sub>COM</sub> , V <sub>NC</sub> , V <sub>NO</sub> (Note 1) ....	(V-) -2V to (V+) +2V
	or 30mA, whichever occurs first
Current (any terminal) .....	30mA
Peak Current, COM, NO, NC	
(pulsed at 1ms, 10% duty cycle).....	100mA
ESD per Method 3015.7 .....	>2000V

**Thermal Information**
**Continuous Power Dissipation**

Plastic DIP (derate 6mW / °C above +70°C) .....	500mW
Narrow SO (derate 6mW / °C above +70°C) .....	450mW
MSOP (derate 4mW / °C above +70°C) .....	330mW
Storage Temperature .....	-65°C to +150°C
Lead Temperature (soldering, 10s) .....	+300°C

**Note 1:** Signals on NC, NO, COM, or IN exceeding V+ or V- are clamped by internal diodes. Limit forward diode current to maximum current rating

**Caution:** Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied.

**Notes:**

- The algebraic convention, where the most negative value is a minimum and the most positive is a maximum, is used in this data sheet.
- Typical values are for DESIGN AID ONLY, not guaranteed or subject to production testing.
- Guaranteed by design
- $\Delta R_{ON} = R_{ON\ max} - R_{ON\ min}$
- Flatness is defined as the difference between the maximum and minimum value of on-resistance measured.
- Leakage parameters are 100% tested at maximum rated hot temperature and guaranteed by correlation at +25°C.
- Off Isolation =  $20\log_{10} [ V_{COM} / (V_{NC} \text{ or } V_{NO}) ]$ .
