

**SN54BCT29826, SN74BCT29826
8-BIT BUS-INTERFACE FLIP-FLOPS
WITH 3-STATE OUTPUTS**

SCBS076A – NOVEMBER 1991 – REVISED NOVEMBER 1993

- State-of-the-Art BICMOS Design Significantly Reduces I_{CCZ}
- ESD Protection Exceeds 2000 V Per MIL-STD-883C, Method 3015; Exceeds 200 V Using Machine Model ($C = 200 \text{ pF}$, $R = 0$)
- 3-State Inverting Buffer-Type Outputs Drive Bus Lines Directly
- Package Options Include Plastic Small-Outline (DW) Packages, Ceramic Chip Carriers (FK) and Flatpacks (W), and Standard Plastic and Ceramic 300-mil DIPs (JT, NT)

description

These 8-bit bus-interface flip-flops feature 3-state outputs designed specifically for driving highly capacitive or relatively low-impedance loads. They are particularly suitable for implementing wider buffer registers, I/O ports, bidirectional bus drivers with parity, and working registers.

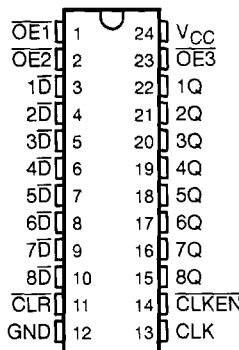

The eight flip-flops are edge-triggered D-type flip-flops. With the clock-enable (CLKEN) input low, the device enters data on the low-to-high transition of the clock. Taking CLKEN high disables the clock buffer, thus latching the outputs. Taking the clear (CLR) input low causes the eight Q outputs to go low independently of the clock.

Buffered output-enable (\overline{OE}_1 , \overline{OE}_2 , or \overline{OE}_3) inputs can be used to place the eight outputs in either a normal logic state (high or low) or a high-impedance state. In the high-impedance state, the outputs neither load nor drive the bus lines significantly. The high-impedance state and increased drive provide the capability to drive bus lines without need for interface or pullup components.

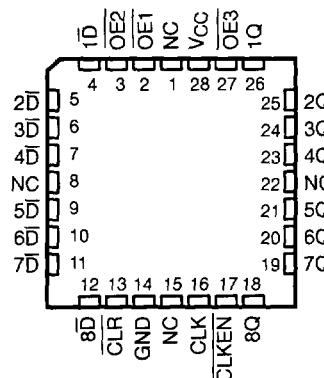

The output-enable inputs do not affect the internal operation of the flip-flops. Old data can be retained or new data can be entered while the outputs are in the high-impedance state.

The SN54BCT29826 is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74BCT29826 is characterized for operation from 0°C to 70°C .

FUNCTION TABLE

INPUTS					OUTPUT
\overline{OE}^\dagger	CLR	CLKEN	CLK	\bar{D}	Q
L	L	X	X	X	L
L	H	L	\uparrow	H	L
L	H	L	\uparrow	L	H
L	H	H	H or L	X	Q_0
H	X	X	X	X	Z

[†] $\overline{OE} = H$ if any of the output-enable inputs is high.

$\overline{OE} = L$ if all of the output-enable inputs are low.

logic symbol‡

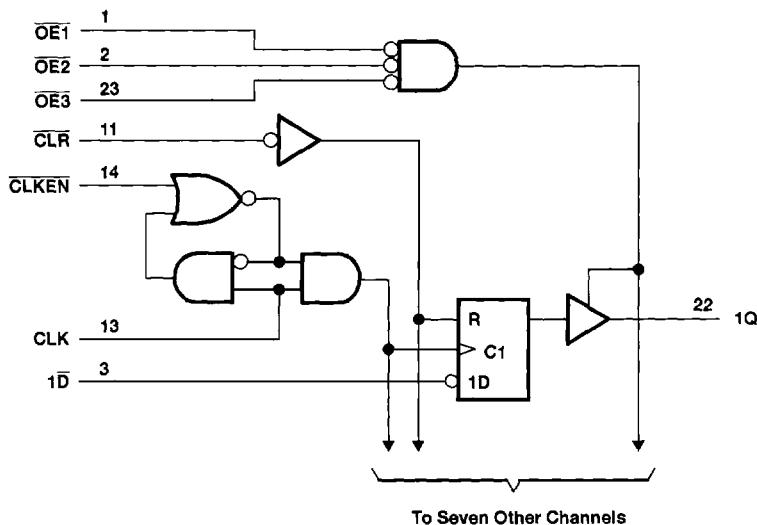

‡ This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.
Pin numbers shown are for the DW, JT, NT, and W packages.

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
