

800mA LDO Regulator for Automotive Applications

NO.EC-084-131206

OUTLINE

The R1170x Series are positive voltage regulator ICs by CMOS process. The R1170x Series have features of high ripple rejection, low dropout voltage, high output voltage accuracy, and low consumption current. Each of these ICs consists of a voltage reference unit, an error amplifier, resistor net for setting output voltage, a current limit circuit at short mode, a chip enable circuit, and thermal-shunt circuit. Output Voltage of R1170 is fixed in the IC.

Low consumption current by the merit of CMOS process and built-in transistors with low ON-resistance make low dropout voltage and chip enable function prolong the battery life. These regulators are remarkable improvement on the current regulators in terms of ripple rejection, input transient response, and load transient response.

Maximum Output Current is large for its compact size.

Thus, the R1170x Series are suitable for various power sources for portable appliances.

This device is packaged in SOT-89-5 that achieves high-density mounting on boards.

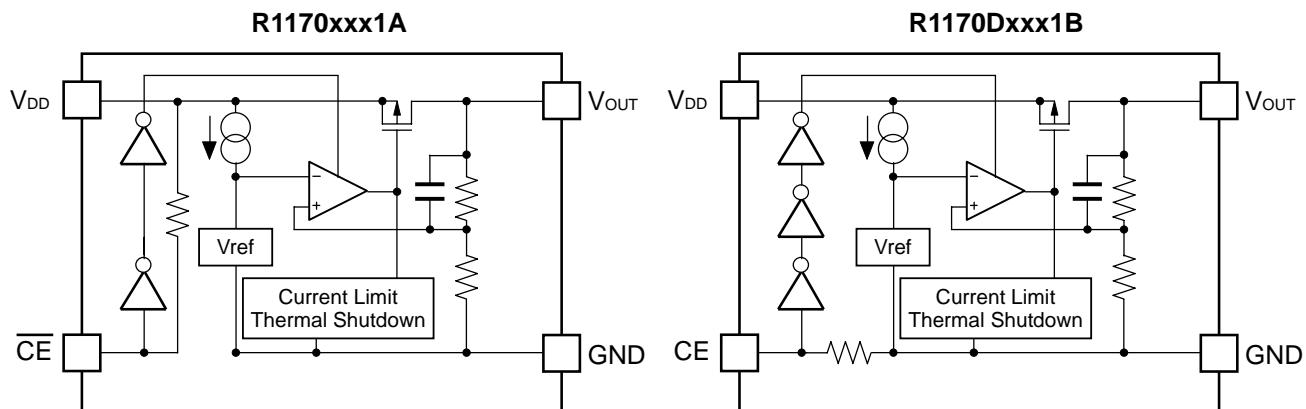

FEATURES

- Input Voltage Range (Maximum Rating) Max. 6V (7.0V)
- Supply Current Typ. 80 μ A
- Standby Current Typ. 0.1 μ A
- Output Current Min. 800mA ($V_{IN}=V_{OUT}+1.0V$)
- Dropout Voltage Typ. 0.12V ($V_{OUT}=3.0V$, $I_{OUT}=300mA$)
- Output Voltage Accuracy $\pm 2.0\%$
- Temperature-Drift Coefficient of Output Voltage Typ. $\pm 100ppm/^{\circ}C$
- Line Regulation Typ. 0.05%/V
- Output Voltage 1.5V to 5.0V (0.1V steps)
- Ripple Rejection TYP. 50 dB
- Package SOT-89-5
- Built-in Current Limit Circuit
- Built-in Thermal Shutdown Circuit
- Ceramic capacitors are recommended to be used with this IC

APPLICATIONS

- Power source for accessories such as car audios, car navigation systems, and ETC systems
- Power source for ECUs such as EV inverter and battery charge control unit

BLOCK DIAGRAMS

SELECTION GUIDE

The output voltage and the chip-enable polarity for the ICs can be selected at the user's request.

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
R1170Hxx1*-T1-#E	SOT-89-5	1,000 pcs	Yes	Yes

xx: The output voltage can be designated in the range from 1.5V (15) to 5.0V (50) in 0.1V steps.

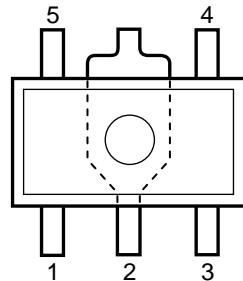

* : CE pin polarity options are as follows.
(A) "L" active
(B) "H" active

: Specify Automotive Class Code

	Operating Temperature Range	Guaranteed Specs Temperature Range	Screening
A	-40°C to 85°C	25°C	High Temperature
H	-40°C to 85°C	25°C	High and Low Temperature

PIN DESCRIPTION

- SOT-89-5

- SOT-89-5

Pin No	Symbol	Description
1	\overline{CE} or CE	Chip Enable Pin
2	GND	Ground Pin
3	NC	No Connection
4	V_{DD}	Input Pin
5	V_{OUT}	Voltage Regulator Output Pin

ABSOLUTE MAXIMUM RATINGS

Symbol	Item	Rating	Unit
V_{IN}	Input Voltage	7.0	V
V_{CE}	Input Voltage (\overline{CE} or CE Input Pin)	-0.3 to $V_{IN}+0.3$	V
V_{OUT}	Output Voltage	-0.3 to $V_{IN}+0.3$	V
P_D	Power Dissipation (SOT-89-5)*	900	mW
		1300	
T_j	Junction Temperature	-40 to 125	°C
T_{stg}	Storage Temperature	-55 to 125	°C

*) Refer to *PACKAGE INFORMATION* for detailed information.

ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

RECOMMENDED OPERATING RATINGS

Symbol	Item	Rating	Unit
V_{IN}	Input Voltage	2.1 to 6.0	V
T_a	Operating Temperature Range	-40 to 85	°C

RECOMMENDED OPERATING RATINGS

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating ratings. The semiconductor devices cannot operate normally over the recommended operating ratings, even if when they are used over such ratings by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating ratings.

TYPICAL APPLICATION

$C_{IN} = 10 \mu F$ (Ceramic), $C_{OUT} = 10 \mu F$ (Ceramic)

TECHNICAL NOTES

Phase Compensation

In these ICs, phase compensation is made with the output capacitor for securing stable operation even if the load current is varied. For this purpose, use as much as $10\mu F$ Capacitor as C_{OUT} .

If you use a tantalum type capacitor and ESR value of the capacitor is large, output might be unstable. Evaluate your circuit with considering frequency characteristics. Further, refer to the Typical Characteristics No. 12.

Response Time

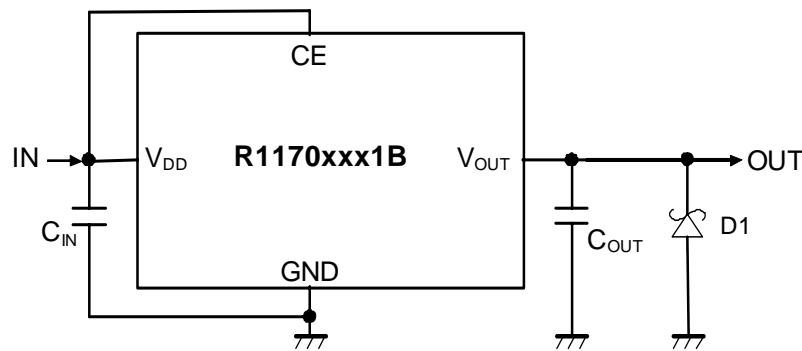

The response time by the chip enable function depends on the value of capacitor. When the capacitor value (C_{OUT}) is $40\mu F$ or more, the response time might change by the length of OFF time.

Mounting on PCB

Make V_{DD} and GND lines sufficient. If their impedance is high, a current flows, the noise picked up or unstable operation may result. Further use as much as $10\mu F$ capacitor between V_{DD} pin and GND pin as close as possible.

Set an Output capacitor between V_{OUT} pin and GND pin for phase compensation as close as possible.
(Refer to the example of typical application)

TYPICAL APPLICATION FOR IC CHIP BREAKDOWN PREVENTION

$$C_{IN} = 10 \text{ uF (Ceramic)}, C_{OUT} = 10 \text{ uF (Ceramic)}$$

When a sudden surge of electrical current travels along the V_{OUT} pin and GND due to a short-circuit, electrical resonance of a circuit involving an output capacitor (C_{OUT}) and a short circuit inductor generates a negative voltage and may damage the device or the load devices. Connecting a schottky diode (D1) between the V_{OUT} pin and GND has the effect of preventing damage to them.

PACKAGE INFORMATION

POWER DISSIPATION (SOT89-5)

Power Dissipation (P_D) depends on conditions of mounting on board. This specification is based on the measurement at the condition below:

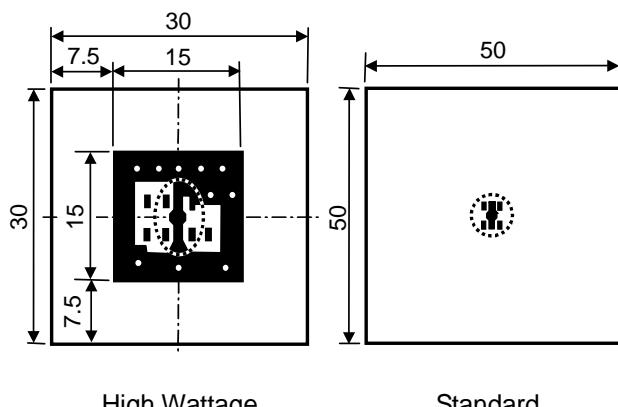

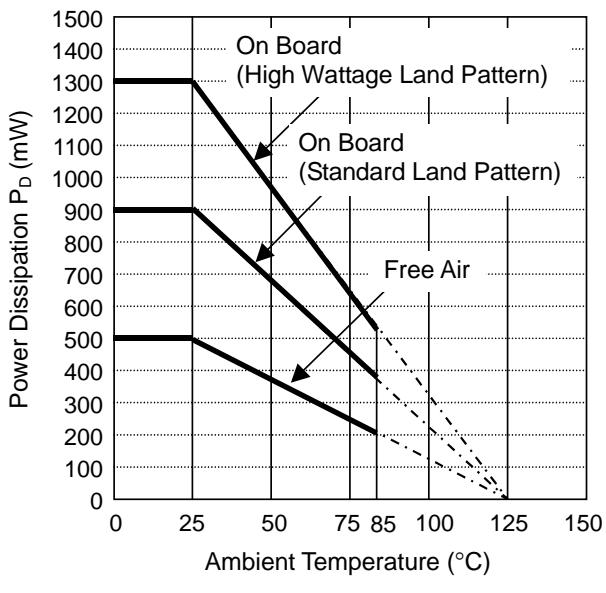

Measurement Conditions

	High Wattage Land Pattern	Standard Land Pattern
Environment	Mounting on Board (Wind velocity=0m/s)	Mounting on Board (Wind velocity=0m/s)
Board Material	Glass cloth epoxy plastic (Double sided)	Glass cloth epoxy plastic (Double sided)
Board Dimensions	30mm × 30mm × 1.6mm	50mm × 50mm × 1.6mm
Copper Ratio	Top side : Approx. 20% , Back side : Approx. 100%	Top side : Approx. 10% , Back side : Approx. 100%
Through-hole	φ0.85mm × 10pcs	-

12) Stable Area ($T_a=25^{\circ}\text{C}$, V_{IN} = Set Output Voltage+1V, C_{IN} = Ceramic 10 μF)

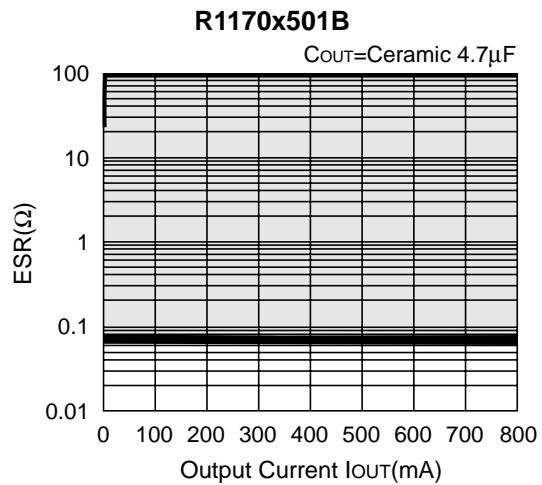

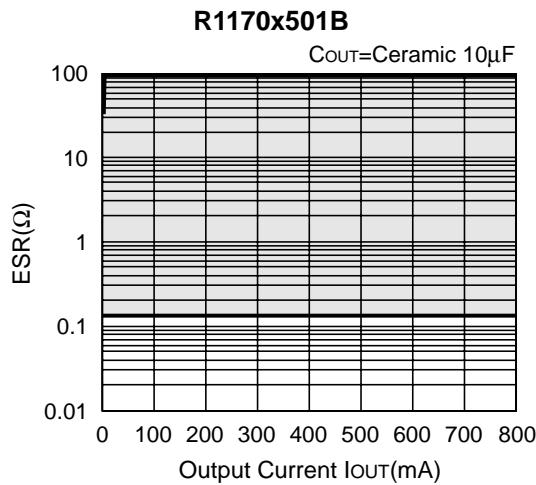

As an output capacitor for this IC, Ceramic capacitor is recommendable. However, other low ESR type capacitor can be used with this IC.

For your reference, noise level is tested with the circuit as shown above, and if the noise level is 40 μV or less than 40 μV , the ESR values are plotted as stable area. Upper limit is described in the next four graphs, or ESR vs. Output Current. (Hatched area is the stable area.)

R1170H

NO.EC-084-131206

Note:

When the large value of output capacitor (C_{out}) is used, the output rising time might be faster than the usual time depending on the status of the internal charge.

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to Ricoh sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of Ricoh.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under Ricoh's or any third party's intellectual property rights or any other rights.
5. The products in this document are designed for automotive applications. However, when using the products for automotive applications, please make sure to contact Ricoh sales representative in advance due to confirming the quality level.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
9. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
10. There can be variation in the marking when different AOI (Automated Optical Inspection) equipment is used.
In the case of recognizing the marking characteristic with AOI, please contact Ricoh sales or our distributor before attempting to use AOI.
11. Please contact Ricoh sales representatives should you have any questions or comments concerning the products or the technical information.

Ricoh is committed to reducing the environmental loading materials in electrical devices with a view to contributing to the protection of human health and the environment.

Ricoh has been providing RoHS compliant products since April 1, 2006 and Halogen-free products since April 1, 2012.
