'HCT645	True

description

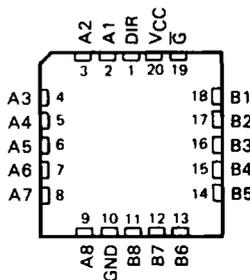

These octal bus transceivers are designed for asynchronous two-way communication between data buses. The devices transmit data from the A bus to the B bus or from the B bus to the A bus depending upon the level at the direction control (DIR) input. The enable input (\bar{G}) can be used to disable the device so the buses are effectively isolated.

The SN54HCT640, SN54HCT643, and SN54HCT645 are characterized for operation over the full military temperature range of -55°C to 125°C . The SN74HCT640, SN74HCT643 and SN74HCT645 are characterized for operation from -40°C to 85°C .

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
