

FEATURES

- Guaranteed V_{os} : 500 μ V maximum**
- Guaranteed matched CMRR: 94 dB minimum**
- Guaranteed matched V_{os} : 750 μ V maximum**
- LM148/LM348 direct replacement**
- Low noise**
- Silicon-nitride passivation**
- Internal frequency compensation**
- Low crossover distortion**
- Continuous short-circuit protection**
- Low input bias current**

GENERAL DESCRIPTION

The OP11 provides four matched 741-type operational amplifiers in a single 14-lead PDIP. The OP11 is pin compatible with the LM148, LM348, RM4156, RM4158, and HA4741 amplifiers. The amplifier is matched for common-mode rejection ratio and offset voltage, which is very important in designing instrumentation amplifiers. In addition, the amplifier is designed to have equal positive-going and negative-going slew rates, which is an important consideration for good audio system performance.

The OP11 is ideal for use in designs requiring minimum space and cost while maintaining performance.

ABSOLUTE MAXIMUM RATINGS

Table 5.

Parameter	Rating
Supply Voltage (V _s)	±22 V
Differential Input Voltage	±30 V
Input Voltage	Supply Voltage
Output Short-Circuit Duration	Continuous (One Amp Only)
Storage Temperature Range	-65°C to +125°C
Lead Temperature (Soldering, 60 sec)	300°C
Operating Temperature Range	0°C to 70°C

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Table 6. Thermal Resistance

Package Type	θ_{JA} ¹	θ_{JC}	Unit

¹ θ_{JA} is specified for worst-case conditions, that is, θ_{JA} is specified for device in socket for PDIP.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.
