Audio Power Amplifier with low power supply

CE0030A

INTRODUCTION

The CE0030A is a fully differential audio power amplifier designed for portable communication device applications. It is capable of delivering 1 watt of continuous average power to an 8Ω BTL load with less than 1% distortion (THD+N) from 5V battery voltage. It operates from 2.0 to 5.0V. Features like 83dB PSRR at 217Hz. improved RF-rectification immunity, the space-saving 8-pin MSOP8 and SOP8 package, the advanced pop & click circuitry, a minimal count of external components and low-power shutdown mode make CE0030A ideal for wireless handsets. The CE0030A is unity-gain stable, and the gain can be configured by external input resistors and internal feedback resistors.
