

N-CHANNEL GaAs MESFET NEZ1011-3E, NEZ1414-3E

3W X, Ku-BAND POWER GaAs MESFET

DESCRIPTION

The NEZ1011-3E and NEZ1414-3E are power GaAs MESFETs which provide high gain, high efficiency and high output in X, Ku-band. The internal input and output matching enables guaranteed performance to be achieved with only a 50 Ω external circuit. To reduce thermal resistance the device has a PHS (Plated Heat Sink) structure. The device incorporates a WSi (tungsten silicide) gate structure for high reliability.

FEATURES

- High Output Power : P_o (1 dB) = +34.0 dBm typ.
- High Linear Gain : 8.5 dB typ. (NEZ1011-3E), 7.5 dB typ. (NEZ1414-3E)
- High Efficiency : 30 % typ.
- Input and Output Internally Matched for Optimum performance

ORDERING INFORMATION

Part Number	Package
NEZ1011-3E NEZ1414-3E	T-78

Remark To order evaluation samples, please contact your local NEC sales office.
(Part number for sample order: NEZ1011-3E, NEZ1414-3E)

ABSOLUTE MAXIMUM RATINGS (T_A = 25°C)

Operation in excess of any one of these parameters may result in permanent damage.

Parameter	Symbol	Ratings	Unit
Drain to Source Voltage	V _{DS}	15	V
Gate to Source Voltage	V _{GS}	-7	V
Drain Current	I _{DS}	3.0 (NEZ1011-3E) 2.5 (NEZ1414-3E)	A
Gate Forward Current	I _{GF}	+20	mA
Gate Reverse Current	I _{GR}	-20	mA
Total Power Dissipation	P _T	15	W
Channel Temperature	T _{ch}	175	°C
Storage Temperature	T _{stg}	-65 to +175	°C

Caution Please handle this device at static-free workstation, because this is an electrostatic sensitive device.

The information in this document is subject to change without notice.

RECOMMENDED OPERATING LIMITS

Characteristics	Symbol	Test Condition	MIN.	TYP.	MAX.	Unit
Drain to Source Voltage	V_{DS}		10	10	10	V
Gain Compression	G_{comp}				3	dB
Channel Temperature	T_{ch}				+130	°C
Gate Resistance ^{Note}	R_g		100	200	200	Ω

Note R_g is the series resistance between the gate supply and the FET gate.

RECOMMENDED SOLDERING CONDITIONS

This product should be soldered under the following recommended conditions. For soldering methods and conditions other than those recommended below, contact your NEC sales representative.

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Partial Heating	Pin temperature: 260°C Time: 5 seconds or less (per pin row)	—

For details of recommended soldering conditions, please contact your local NEC sales office.

[MEMO]

Caution

The Great Care must be taken in dealing with the devices in this guide.

The reason is that the material of the devices is GaAs (Gallium Arsenide), which is designated as harmful substance according to the law concerned.

Keep the law concerned and so on, especially in case of removal.

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.

NEC devices are classified into the following three quality grades:

"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.

Anti-radioactive design is not implemented in this product.
