

Axial-Leaded 1.5 Watt Plastic Zener Diodes

DESCRIPTION

The 1N5913BPe3 – 5956BPe3 series of 1.5 watt Zeners provides voltage regulation in a selection from 3.3 to 200 volts with different tolerances available. These plastic encapsulated Zeners have moisture classification of Level 1 with no dry pack required. They are also available in various military equivalent screening levels for high reliability. The plastic molded Zeners with a P suffix provide a lower thermal resistance (junction to lead) compared to the optional glass body (G suffix) for these same JEDEC part numbers. Both package options are available by Microsemi.

Important: For the latest information, visit our website <http://www.microsemi.com>.

NOTES:

1. Zener voltage (V_Z) is measured at $T_L = 30\text{ }^\circ\text{C}$ and 90 seconds after application of dc current.
2. The Zener impedance is derived from the 60 Hz ac voltage, which results when an ac current having an rms value equal to 10% of the dc Zener current (I_{ZT} or I_{ZK}) is superimposed on I_{ZT} or I_{ZK} . See [MicroNote 202](#) for Zener impedance variation with different operating currents.
