Rev. 2, 01/2019

MC9S08PL16

MC9S08PL16 Series Data Sheet

Supports: MC9S08PL16 and MC9S08PL8
Key features

- 8-Bit S08 central processor unit (CPU)
 - Up to 20 MHz bus at 2.7 V to 5.5 V across temperature range of -40 °C to 85 °C
 - Supporting up to 40 interrupt/reset sources
 - Supporting up to four-level nested interrupt
 - On-chip memory
 - Up to 16 KB flash read/program/erase over full operating voltage and temperature
 - Up to 256 byte EEPROM; 2-byte erase sector; program and erase while executing flash
 - Up to 2048 byte random-access memory (RAM)
 - Flash and RAM access protection
- · Power-saving modes
 - One low-power stop mode; reduced power wait mode
 - Peripheral clock enable register can disable clocks to unused modules, reducing currents; allows clocks to remain enabled to specific peripherals in stop3 mode

Clocks

- Oscillator (XOSC) loop-controlled Pierce oscillator; crystal or ceramic resonator range of 31.25 kHz to 39.0625 kHz or 4 MHz to 20 MHz
- Internal clock source (ICS) containing a frequency-locked-loop (FLL) controlled by internal or external reference; precision trimming of internal reference allowing 1% deviation across temperature range of 0 °C to 70 °C and 2% deviation across temperature range of -40 °C to 85 °C; up to 20 MHz
- System protection
 - Watchdog with independent clock source
 - Low-voltage detection with reset or interrupt; selectable trip points
 - Illegal opcode detection with reset
 - Illegal address detection with reset

· Development support

- Single-wire background debug interface
- Breakpoint capability to allow three breakpoints setting during in-circuit debugging
- On-chip in-circuit emulator (ICE) debug module containing two comparators and nine trigger modes

Peripherals

- ACMP one analog comparator with both positive and negative inputs; separately selectable interrupt on rising and falling comparator output; filtering
- ADC 12-channel, 10-bit resolution; 2.5 μs conversion time; data buffers with optional watermark; automatic compare function; internal bandgap reference channel; operation in stop mode; optional hardware trigger
- CRC programmable cyclic redundancy check module
- FTM two flex timer modulators modules including one 6-channel and one 2-channel ones; 16-bit counter; each channel can be configured for input capture, output compare, edge- or center-aligned PWM mode
- MTIM one modulo timers with 8-bit prescaler and overflow interrupt
- RTC 16-bit real timer counter (RTC)
- SCI two serial communication interface (SCI/ UART) modules optional 13-bit break; full duplex non-return to zero (NRZ); LIN extension support

Input/Output

- Up to 30 GPIOs including one output-only pin
- One 8-bit keyboard interrupt module (KBI)
- Two true open-drain output pins

Package options

- 32-pin LQFP
- 20-pin TSSOP
- 16-pin TSSOP

NXP reserves the right to change the production detail specifications as may be required to permit improvements in the design of its products.

1 Ordering information

The following table summarizes the part numbers of the devices covered by this document.

MC9S08PL16 MC9S08PL8 **Feature Part Number CLC** CTJ **CTG CLC** CTJ **CTG** 20 20 Max. frequency 20 20 20 20 (MHz) Flash memory 16 16 8 8 16 (KB) RAM (KB) 2 2 2 2 2 2 EEPROM (B) 256 256 256 256 256 256 10-bit ADC 12ch 10ch 8ch 12ch 10ch 8ch **ACMP** 1 1 6ch+2ch 2ch+2ch 16-bit FlexTimer 6ch+2ch 6ch+2ch 2ch+2ch 6ch+2ch 8-bit Modulo 1 1 timer RTC Yes Yes Yes Yes Yes Yes SCI (LIN 2 1 1 2 Capable) Watchdog Yes Yes Yes Yes Yes Yes CRC Yes Yes Yes Yes Yes Yes **KBI** pins 8 8 8 8 8 8 **GPIO** 30 14 14 18 30 18 Package 32-LQFP 20-TSSOP 16-TSSOP 32-LQFP 20-TSSOP 16-TSSOP

Table 1. Ordering information

2 Part identification

2.1 Description

Part numbers for the chip have fields that identify the specific part. You can use the values of these fields to determine the specific part you have received.

2.2 Format

Part numbers for this device have the following format:

MC9S08PL16 Series Data Sheet, Rev. 2, 01/2019

Parameter Classification

MC 9 S08 PL AA B CC

2.3 Fields

This table lists the possible values for each field in the part number (not all combinations are valid):

| Field | Description | Values |
|-------|----------------------------------|--|
| MC | Qualification status | MC = fully qualified, general market flow |
| 9 | Memory | • 9 = flash based |
| S08 | Core | • S08 = 8-bit CPU |
| PL | Device family | • PL |
| AA | Approximate flash size in KB | 16 = 16 KB8 = 8 KB |
| В | Operating temperature range (°C) | • C = -40 to 85 |
| CC | Package designator | LC = 32-LQFP TJ = 20-TSSOP TG = 16-TSSOP |

2.4 Example

This is an example part number:

MC9S08PL16CLC

3 Parameter Classification

The electrical parameters shown in this supplement are guaranteed by various methods. To give the customer a better understanding, the following classification is used and the parameters are tagged accordingly in the tables where appropriate:

Table 2. Parameter Classifications

| Р | Those parameters are guaranteed during production testing on each individual device. |
|---|--|
| С | Those parameters are achieved by the design characterization by measuring a statistically relevant sample size across process variations. |
| Т | Those parameters are achieved by design characterization on a small sample size from typical devices under typical conditions unless otherwise noted. All values shown in the typical column are within this category. |
| D | Those parameters are derived mainly from simulations. |

NOTE

The classification is shown in the column labeled "C" in the parameter tables where appropriate.

4 Ratings

4.1 Thermal handling ratings

| Symbol | Description | Min. | Max. | Unit | Notes |
|------------------|-------------------------------|-------------|------|------|-------|
| T _{STG} | Storage temperature | - 55 | 150 | °C | 1 |
| T _{SDR} | Solder temperature, lead-free | _ | 260 | °C | 2 |

- 1. Determined according to JEDEC Standard JESD22-A103, High Temperature Storage Life.
- Determined according to IPC/JEDEC Standard J-STD-020, Moisture/Reflow Sensitivity Classification for Nonhermetic Solid State Surface Mount Devices.

4.2 Moisture handling ratings

| Symbol | Description | Min. | Max. | Unit | Notes |
|--------|----------------------------|------|------|------|-------|
| MSL | Moisture sensitivity level | | 3 | _ | 1 |

^{1.} Determined according to IPC/JEDEC Standard J-STD-020, Moisture/Reflow Sensitivity Classification for Nonhermetic Solid State Surface Mount Devices.

4.3 ESD handling ratings

| Symbol | Description | Min. | Max. | Unit | Notes |
|------------------|---|-------|-------|------|-------|
| V_{HBM} | Electrostatic discharge voltage, human body model | -6000 | +6000 | V | 1 |
| V _{CDM} | Electrostatic discharge voltage, charged-device model | -500 | +500 | V | 2 |
| I _{LAT} | Latch-up current at ambient temperature of 85 | -100 | +100 | mA | |

- Determined according to JEDEC Standard JESD22-A114, Electrostatic Discharge (ESD) Sensitivity Testing Human Body Model (HBM).
- 2. Determined according to JEDEC Standard JESD22-C101, Field-Induced Charged-Device Model Test Method for Electrostatic-Discharge-Withstand Thresholds of Microelectronic Components.

MC9S08PL16 Series Data Sheet, Rev. 2, 01/2019

4.4 Voltage and current operating ratings

Absolute maximum ratings are stress ratings only, and functional operation at the maxima is not guaranteed. Stress beyond the limits specified in below table may affect device reliability or cause permanent damage to the device. For functional operating conditions, refer to the remaining tables in this document.

This device contains circuitry protecting against damage due to high static voltage or electrical fields; however, it is advised that normal precautions be taken to avoid application of any voltages higher than maximum-rated voltages to this high-impedance circuit. Reliability of operation is enhanced if unused inputs are tied to an appropriate logic voltage level (for instance, either V_{SS} or V_{DD}) or the programmable pullup resistor associated with the pin is enabled.

| Symbol | Description | Min. | Max. | Unit |
|------------------|---|-----------------------|-----------------------|------|
| V_{DD} | Supply voltage | -0.3 | 6.0 | V |
| I _{DD} | Maximum current into V _{DD} | _ | 120 | mA |
| V _{DIO} | Digital input voltage (except $\overline{\text{RESET}}$, EXTAL, XTAL, or true open drain pin) | -0.3 | V _{DD} + 0.3 | V |
| | Digital input voltage (true open drain pin) | -0.3 | 6 | V |
| V _{AIO} | Analog ¹ , RESET, EXTAL, and XTAL input voltage | -0.3 | V _{DD} + 0.3 | V |
| I _D | Instantaneous maximum current single pin limit (applies to all port pins) | - 25 | 25 | mA |
| V_{DDA} | Analog supply voltage | V _{DD} – 0.3 | V _{DD} + 0.3 | V |

^{1.} All digital I/O pins, except open-drain pin , are internally clamped to V_{SS} and V_{DD}. is only clamped to V_{SS}.

General

Nonswitching electrical specifications 5.1

5.1.1 **DC** characteristics

This section includes information about power supply requirements and I/O pin characteristics.

Table 3. DC characteristics

| Symbol | С | | Descriptions | | Min | Typical ¹ | Max | Unit |
|-----------------------|-------------|--|---|-----------------------------------|-----------------------|----------------------|----------------------|------|
| _ | _ | Oper | ating voltage | _ | 2.7 | _ | 5.5 | V |
| V _{OH} | С | Output high voltage | All I/O pins, standard- drive strength | 5 V, I _{load} = -5 mA | V _{DD} - 0.8 | _ | _ | ٧ |
| | С | | | 3 V, I _{load} = -2.5 mA | V _{DD} - 0.8 | _ | _ | ٧ |
| I _{OHT} | D | Output high | Max total I _{OH} for all | 5 V | _ | _ | -100 | mA |
| | | current | ports | 3 V | _ | _ | -50 | |
| V _{OL} | С | Output low voltage | All I/O pins, standard- drive strength | 5 V, I _{load} = 5 mA | _ | _ | 0.8 | ٧ |
| | С | | | 3 V, I _{load} = 2.5 mA | _ | _ | 0.8 | V |
| I _{OLT} | ·=· · · | | Max total I _{OL} for all | 5 V | _ | _ | 100 | mA |
| | | current | ports | 3 V | _ | _ | 50 | |
| V _{IH} | Р | Input high | All digital inputs | V _{DD} >4.5V | $0.70 \times V_{DD}$ | _ | _ | V |
| | С | voltage | | V _{DD} >2.7V | $0.75 \times V_{DD}$ | _ | _ | |
| V _{IL} | Р | Input low | All digital inputs | V _{DD} >4.5V | _ | _ | $0.30 \times V_{DD}$ | V |
| | С | voltage | | V _{DD} >2.7V | _ | _ | $0.35 \times V_{DD}$ | |
| V _{hys} | С | Input hysteresis | All digital inputs | _ | $0.06 \times V_{DD}$ | _ | _ | mV |
| II _{In} I | Р | Input leakage current | All input only pins (per pin) | $V_{IN} = V_{DD}$ or V_{SS} | _ | 0.1 | 1 | μA |
| ll _{OZ} l | Р | Hi-Z (off- state) leakage current | All input/output (per pin) | $V_{IN} = V_{DD}$ or V_{SS} | _ | 0.1 | 1 | μA |
| II _{OZTOT} I | С | Total leakage combined for all inputs and Hi-Z pins | All input only and I/O | $V_{IN} = V_{DD}$ or V_{SS} | _ | _ | 2 | μА |

MC9S08PL16 Series Data Sheet, Rev. 2, 01/2019 **NXP Semiconductors**

Nonswitching electrical specifications

Table 3. DC characteristics (continued)

| Symbol | С | | Descriptions | | Min | Typical ¹ | Max | Unit |
|------------------------------|---|-----------------------------|---|-------------------|------|----------------------|------|------|
| R _{PU} | Р | Pullup resistors | All digital inputs, when enabled (all I/O pins other than PTA2 and PTA3) | | 30.0 | _ | 50.0 | kΩ |
| R _{PU} ² | Р | Pullup resistors | PTA2 and PTA3 pin | _ | 30.0 | _ | 60.0 | kΩ |
| I _{IC} | D | DC injection | Single pin limit | $V_{IN} < V_{SS}$ | -0.2 | _ | 2 | mA |
| | | current ^{3, 4, 5} | Total MCU limit, includes sum of all stressed pins | $V_{IN} > V_{DD}$ | -5 | _ | 25 | |
| C _{In} | С | Input capacitance, all pins | | _ | _ | _ | 7 | pF |
| V _{RAM} | С | RAM re | etention voltage | _ | 2.0 | _ | _ | V |

- 1. Typical values are measured at 25 °C. Characterized, not tested.
- 2. The specified resistor value is the actual value internal to the device. The pullup value may appear higher when measured externally on the pin.
- 3. All functional non-supply pins, except for PTA2 and PTA3, are internally clamped to V_{SS} and V_{DD}.
- 4. Input must be current-limited to the value specified. To determine the value of the required current-limiting resistor, calculate resistance values for positive and negative clamp voltages, then use the large one.
- 5. Power supply must maintain regulation within operating V_{DD} range during instantaneous and operating maximum current conditions. If the positive injection current (V_{In} > V_{DD}) is higher than I_{DD}, the injection current may flow out of V_{DD} and could result in external power supply going out of regulation. Ensure that external V_{DD} load will shunt current higher than maximum injection current when the MCU is not consuming power, such as no system clock is present, or clock rate is very low (which would reduce overall power consumption).

Table 4. LVD and POR Specification

| Symbol | С | Desc | ription | Min | Тур | Max | Unit |
|--------------------|---|--------------------------------------|---|-----|------|------|------|
| V _{POR} | D | POR re-arr | POR re-arm voltage ^{1, 2} | | 1.75 | 2.0 | V |
| V _{LVDH} | С | threshold - hig | Falling low-voltage detect threshold - high range (LVDV = 1) ³ | | 4.3 | 4.4 | V |
| V _{LVW1H} | С | Falling low- voltage | Level 1 falling (LVWV = 00) | 4.3 | 4.4 | 4.5 | V |
| V _{LVW2H} | С | warning threshold - high range | Level 2 falling (LVWV = 01) | 4.5 | 4.5 | 4.6 | V |
| V _{LVW3H} | С | Iligii ralige | Level 3 falling (LVWV = 10) | 4.6 | 4.6 | 4.7 | V |
| V _{LVW4H} | С | | Level 4 falling (LVWV = 11) | 4.7 | 4.7 | 4.8 | V |
| V _{HYSH} | С | | High range low-voltage detect/warning hysteresis | | 100 | _ | mV |
| V _{LVDL} | С | threshold - low | Falling low-voltage detect threshold - low range (LVDV = 0) | | 2.61 | 2.66 | V |

Table continues on the next page...

Table 4. LVD and POR Specification (continued)

| Symbol | С | Desci | Description | | Тур | Max | Unit |
|---------------------|---|--|--------------------------------|------|------|------|------|
| V_{LVDW1L} | С | Falling low- voltage | Level 1 falling (LVWV = 00) | 2.62 | 2.7 | 2.78 | V |
| V _{LVDW2L} | С | warning threshold - low range | Level 2 falling (LVWV = 01) | 2.72 | 2.8 | 2.88 | V |
| V _{LVDW3L} | С | - low range | Level 3 falling (LVWV = 10) | 2.82 | 2.9 | 2.98 | V |
| V_{LVDW4L} | С | | Level 4 falling (LVWV = 11) | 2.92 | 3.0 | 3.08 | V |
| V _{HYSDL} | С | | -voltage detect eresis | _ | 40 | _ | mV |
| V _{HYSWL} | С | Low range low-voltage warning hysteresis | | _ | 80 | _ | mV |
| V_{BG} | Р | Buffered ban | dgap output 4 | 1.14 | 1.16 | 1.18 | V |

- 1. Maximum is highest voltage that POR is guaranteed.
- 2. POR ramp time must be longer than 20us/V to get a stable startup.
- 3. Rising thresholds are falling threshold + hysteresis.
- 4. Voltage factory trimmed at $V_{DD} = 5.0 \text{ V}$, Temp = 25 °C

| | | ADICLK = 11B | | | | | | | |
| 8 | С | LVD adder to stop3 ⁴ | _ | _ | 5 | 128 | _ | μA | -40 to 85 °C |
| | С | ' | | | 3 | 124 | _ | 1 | |

- 1. Data in Typical column was characterized at 5.0 V, 25 °C or is typical recommended value.
- 2. RTC adder cause <1 µA I_{DD} increase typically, RTC clock source is 1kHz LPO clock.
- 3. ACMP adder cause <10 μ A I_{DD} increase typically.
- 4. LVD is periodically woken up from stop3 by 5% duty cycle. The period is equal to or less than 2 ms.

5.1.3 EMC performance

Electromagnetic compatibility (EMC) performance is highly dependent on the environment in which the MCU resides. Board design and layout, circuit topology choices, location and characteristics of external components as well as MCU software operation all play a significant role in EMC performance. The system designer should consult NXP applications notes such as AN2321, AN1050, AN1263, AN2764, and AN1259 for advice and guidance specifically targeted at optimizing EMC performance.

MC9S08PL16 Series Data Sheet, Rev. 2, 01/2019

5.2 Switching specifications

Control timing 5.2.1

Table 6. Control timing

| Num | С | Rating | J | Symbol | Min | Typical ¹ | Max | Unit |
|-----|---|---|--------------------------------|---------------------|----------------------|----------------------|-----|------|
| 1 | Р | Bus frequency (t _{cyc} = 1/f _{Bus}) |) | f _{Bus} | DC | _ | 20 | MHz |
| 2 | С | Internal low power oscillato | r frequency | f _{LPO} | _ | 1.0 | _ | KHz |
| 3 | D | External reset pulse width ² | | t _{extrst} | 1.5 × | _ | _ | ns |
| | | | | | t _{cyc} | | | |
| 4 | D | Reset low drive | | t _{rstdrv} | $34 \times t_{cyc}$ | _ | _ | ns |
| 5 | D | BKGD/MS setup time after debug force reset to enter u | t _{MSSU} | 500 | _ | _ | ns | |
| 6 | D | BKGD/MS hold time after is debug force reset to enter u | | t _{MSH} | 100 | _ | _ | ns |
| 7 | D | IRQ pulse width | Asynchronous path ² | t _{ILIH} | 100 | _ | _ | ns |
| | D | | Synchronous path ⁴ | t _{IHIL} | $1.5 \times t_{cyc}$ | _ | _ | ns |
| 8 | D | Keyboard interrupt pulse width | Asynchronous path ² | t _{ILIH} | 100 | _ | _ | ns |
| | D | | Synchronous path | t _{IHIL} | $1.5 \times t_{cyc}$ | _ | _ | ns |
| 9 | С | Port rise and fall time - | _ | t _{Rise} | _ | 10.2 | _ | ns |
| | С | standard drive strength (load = 50 pF) ⁵ | | t _{Fall} | _ | 9.5 | _ | ns |

- 1. Typical values are based on characterization data at V_{DD} = 5.0 V, 25 °C unless otherwise stated.
- 2. This is the shortest pulse that is guaranteed to be recognized as a reset pin request.
- 3. To enter BDM mode following a POR, BKGD/MS must be held low during the powerup and for a hold time of t_{MSH} after V_{DD} rises above V_{LVD}.
- 4. This is the minimum pulse width that is guaranteed to pass through the pin synchronization circuitry. Shorter pulses may or may not be recognized. In stop mode, the synchronizer is bypassed so shorter pulses can be recognized.
- 5. Timing is shown with respect to 20% V_{DD} and 80% V_{DD} levels. Temperature range -40 °C to 85 °C.

5.2.3 FTM module timing

Synchronizer circuits determine the shortest input pulses that can be recognized or the fastest clock that can be used as the optional external source to the timer counter. These synchronizers operate from the current bus rate clock.

| No. | С | Function | Symbol | Min | Max | Unit |
|-----|---|----------------------------|-------------------|-----|---------------------|------------------|
| 1 | D | External clock frequency | f _{TCLK} | 0 | f _{Bus} /4 | Hz |
| 2 | D | External clock period | t _{TCLK} | 4 | _ | t _{cyc} |
| 3 | D | External clock high time | t _{clkh} | 1.5 | _ | t _{cyc} |
| 4 | D | External clock low time | t _{clkl} | 1.5 | _ | t _{cyc} |
| 5 | D | Input capture pulse width | t _{ICPW} | 1.5 | _ | t _{cyc} |

Table 8. FTM input timing

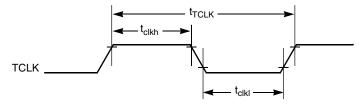

Figure 9. Timer external clock

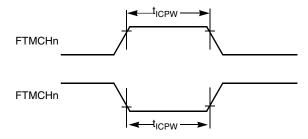

Figure 10. Timer input capture pulse

5.3 Thermal specifications

5.3.1 Thermal operating requirements

Table 9. Thermal operating requirements

| Symbol | Description | Min. | Max. | Unit |
|----------------|--------------------------|------|------|------|
| T _J | Die junction temperature | -40 | 105 | °C |
| T _A | Ambient temperature | -40 | 85 | °C |

NOTE

Maximum T_A can be exceeded only if the user ensures that T_J does not exceed the maximum. The simplest method to determine T_J is: $T_J = T_A + R_{\theta J A} \times \text{chip power dissipation}$.

5.3.2 Thermal characteristics

This section provides information about operating temperature range, power dissipation, and package thermal resistance. Power dissipation on I/O pins is usually small compared to the power dissipation in on-chip logic and voltage regulator circuits, and it is user-determined rather than being controlled by the MCU design. To take $P_{\text{I/O}}$ into account in power calculations, determine the difference between actual pin voltage and V_{SS} or V_{DD} and multiply by the pin current for each I/O pin. Except in cases of unusually high pin current (heavy loads), the difference between pin voltage and V_{SS} or V_{DD} will be very small.

Table 10. Thermal characteristics

| Rating | Symbol | Value | Unit |
|--|-----------------------------|--|------|
| Operating temperature range (packaged) | T _A ¹ | T _L to T _H -40 to 85 | °C |
| Junction temperature range | T _J | -40 to 105 | °C |
| | Thermal resistance | e single-layer board | ' |
| 32-pin LQFP | $R_{\theta JA}$ | 88 | °C/W |
| 20-pin TSSOP | $R_{\theta JA}$ | 116 | °C/W |
| 16-pin TSSOP | $R_{\theta JA}$ | 130 | °C/W |
| | Thermal resistan | ce four-layer board | |
| 32-pin LQFP | $R_{\theta JA}$ | 59 | °C/W |
| 20-pin TSSOP | $R_{\theta JA}$ | 76 | °C/W |
| 16-pin TSSOP | $R_{\theta JA}$ | 87 | °C/W |

MC9S08PL16 Series Data Sheet, Rev. 2, 01/2019

1. Maximum T_A can be exceeded only if the user ensures that T_J does not exceed the maximum. The simplest method to determine T_J is: $T_J = T_A + R_{\theta JA} x$ chip power dissipation.

6 Peripheral operating requirements and behaviors

6.1 External oscillator (XOSC) and ICS characteristics

Table 11. XOSC and ICS specifications (temperature range = -40 to 85 °C ambient)

| Num | С | С | haracteristic | Symbol | Min | Typical ¹ | Max | Unit |
|-----|-----|---|---|--------------------|---------|-----------------------|---------|------|
| 1 | С | Oscillator | Low range (RANGE = 0) | f _{lo} | 31.25 | 32.768 | 39.0625 | kHz |
| | С | crystal or resonator | High range (RANGE = 1) FEE or FBE mode ² | f _{hi} | 4 | _ | 20 | MHz |
| | С | | High range (RANGE = 1), high gain (HGO = 1), FBELP mode | f _{hi} | 4 | _ | 20 | MHz |
| | С | | High range (RANGE = 1), low power (HGO = 0), FBELP mode | f _{hi} | 4 | _ | 20 | MHz |

| | D | High-Gain Mode | 16 MHz | | _ | 0 | _ | kΩ |
| 6 | С | Crystal start-up | Low range, low power | t _{CSTL} | _ | 1000 | _ | ms |
| | С | time Low range = 32.768 kHz | Low range, high power | | _ | 800 | _ | ms |
| | С | crystal; High | High range, low power | t _{CSTH} | | 3 | | ms |
| | С | range = 20 MHz crystal ⁵ , ⁶ | High range, high power | | | 1.5 | _ | ms |
| 7 | Т | Internal re | eference start-up time | t _{IRST} | _ | 20 | 50 | μs |
| 8 | D | Square wave | FEE or FBE mode ² | f _{extal} | 0.03125 | _ | 5 | MHz |
| | D | input clock frequency | FBELP mode | | 0 | _ | 20 | MHz |

Table continues on the next page...

Peripheral operating requirements and behaviors

Table 11. XOSC and ICS specifications (temperature range = -40 to 85 °C ambient) (continued)

| Num | С | С | haracteristic | Symbol | Min | Typical ¹ | Max | Unit |
|-----|---|--|--|----------------------|-----|----------------------|------|-------------------|
| 9 | Р | Average internal reference frequency - trimmed | | f _{int_t} | _ | | _ | kHz |
| 10 | Р | DCO output frequency range - trimmed | | f _{dco_t} | 16 | _ | 20 | MHz |
| 11 | Р | Total deviation of DCO output | Over full voltage and temperature range | Δf_{dco_t} | | | ±2.0 | %f _{dco} |
| | С | from trimmed frequency ⁵ Over fixed voltage and temperature range of 0 to 70 °C | | | | | ±1.0 | |
| 12 | С | FLL acquisition time ⁵ , ⁷ | | t _{Acquire} | _ | _ | 2 | ms |
| 13 | С | | tter of DCO output clock d over 2 ms interval) ⁸ | C _{Jitter} | _ | 0.02 | 0.2 | %f _{dco} |

- 1. Data in Typical column was characterized at 5.0 V, 25 °C or is typical recommended value.
- 2. When ICS is configured for FEE or FBE mode, input clock source must be divisible using RDIV to within the range of 31.25 kHz to 39.0625 kHz.
- 3. See crystal or resonator manufacturer's recommendation.
- Load capacitors (C₁,C₂), feedback resistor (R_F) and series resistor (R_S) are incorporated internally when RANGE = HGO = 0.
- 5. This parameter is characterized and not tested on each device.
- 6. Proper PC board layout procedures must be followed to achieve specifications.
- 7. This specification applies to any time the FLL reference source or reference divider is changed, trim value changed, or changing from FLL disabled (FBELP, FBILP) to FLL enabled (FEI, FEE, FBE, FBI). If a crystal/resonator is being used as the reference, this specification assumes it is already running.
- 8. Jitter is the average deviation from the programmed frequency measured over the specified interval at maximum f_{Bus}. Measurements are made with the device powered by filtered supplies and clocked by a stable external clock signal. Noise injected into the FLL circuitry via V_{DD} and V_{SS} and variation in crystal oscillator frequency increase the C_{Jitter} percentage for a given interval.

6.2 NVM specifications

This section provides details about program/erase times and program/erase endurance for the flash and EEPROM memories.

Table 12. Flash characteristics

| С | Characteristic | Symbol | Min ¹ | Typical ² | Max ³ | Unit ⁴ |
|---|---|-------------------------|------------------|----------------------|------------------|-------------------|
| D | Supply voltage for program/erase -40 °C to 85 °C | V _{prog/erase} | 2.7 | _ | 5.5 | V |
| D | Supply voltage for read operation | V _{Read} | 2.7 | _ | 5.5 | V |
| D | NVM Bus frequency | f _{NVMBUS} | 1 | _ | 25 | MHz |
| D | NVM Operating frequency | f _{NVMOP} | 0.8 | 1 | 1.05 | MHz |
| D | Erase Verify All Blocks | t _{VFYALL} | _ | _ | 17338 | t _{cyc} |
| D | Erase Verify Flash Block | t _{RD1BLK} | _ | _ | 16913 | t _{cyc} |
| D | Erase Verify EEPROM Block | t _{RD1BLK} | _ | _ | 810 | t _{cyc} |
| D | Erase Verify Flash Section | t _{RD1SEC} | _ | _ | 484 | t _{cyc} |
| D | Erase Verify EEPROM Section | t _{DRD1SEC} | _ | _ | 555 | t _{cyc} |
| D | Read Once | t _{RDONCE} | _ | _ | 450 | t _{cyc} |
| D | Program Flash (2 word) | t _{PGM2} | 0.12 | 0.12 | 0.29 | ms |
| D | Program Flash (4 word) | t _{PGM4} | 0.20 | 0.21 | 0.46 | ms |
| D | Program Once | t _{PGMONCE} | 0.20 | 0.21 | 0.21 | ms |
| D | Program EEPROM (1 Byte) | t _{DPGM1} | 0.10 | 0.10 | 0.27 | ms |
| D | Program EEPROM (2 Byte) | t _{DPGM2} | 0.17 | 0.18 | 0.43 | ms |
| D | Program EEPROM (3 Byte) | t _{DPGM3} | 0.25 | 0.26 | 0.60 | ms |
| D | Program EEPROM (4 Byte) | t _{DPGM4} | 0.32 | 0.33 | 0.77 | ms |
| D | Erase All Blocks | t _{ERSALL} | 96.01 | 100.78 | 101.49 | ms |
| D | Erase Flash Block | t _{ERSBLK} | 95.98 | 100.75 | 101.44 | ms |
| D | Erase Flash Sector | t _{ERSPG} | 19.10 | 20.05 | 20.08 | ms |
| D | Erase EEPROM Sector | t _{DERSPG} | 4.81 | 5.05 | 20.57 | ms |
| D | Unsecure Flash | t _{UNSECU} | 96.01 | 100.78 | 101.48 | ms |
| D | Verify Backdoor Access Key | t _{VFYKEY} | _ | _ | 464 | t _{cyc} |
| D | Set User Margin Level | t _{MLOADU} | _ | _ | 407 | t _{cyc} |
| С | FLASH Program/erase endurance T_L to T_H in the operating temperature range | n _{FLPE} | 10 k | 100 k | _ | Cycles |
| С | EEPROM Program/erase endurance T _L to T _H in the operating temperature range | n _{FLPE} | 50 k | 500 k | _ | Cycles |
| С | Data retention at an average junction temperature of T _{Javg} = 85°C after up to 10,000 program/erase cycles | t _{D_ret} | 15 | 100 | _ | years |

^{1.} Minimum times are based on maximum $f_{\mbox{\scriptsize NVMOP}}$ and maximum $f_{\mbox{\scriptsize NVMBUS}}$

^{2.} Typical times are based on typical f_{NVMOP} and maximum f_{NVMBUS}

^{3.} Maximum times are based on typical $f_{\mbox{\scriptsize NVMOP}}$ and typical $f_{\mbox{\scriptsize NVMBUS}}$ plus aging

^{4.} $t_{cyc} = 1 / f_{NVMBUS}$

Peripheral operating requirements and behaviors

Program and erase operations do not require any special power sources other than the normal V_{DD} supply. For more detailed information about program/erase operations, see the Memory section.

6.3 Analog

6.3.1 ADC characteristics

Table 13. 5 V 10-bit ADC operating conditions

| Characteri stic | Conditions | Symb | Min | Typ ¹ | Max | Unit | Comment |
|----------------------------------|--|-------------------|-------------------|------------------|-------------------|------|-----------------|
| Supply | Absolute | V _{DDA} | 2.7 | _ | 5.5 | V | _ |

^{1.} This is a true open-drain pin when operated as output.

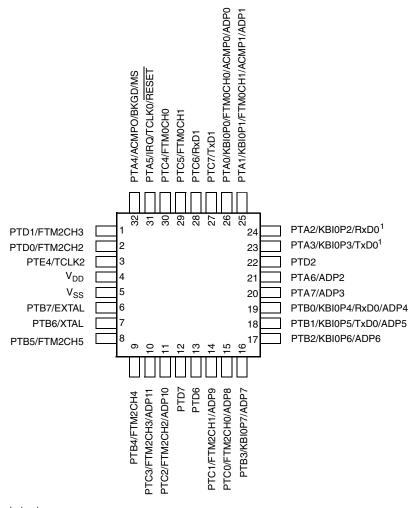

Note

When an alternative function is first enabled, it is possible to get a spurious edge to the module. User software must clear any associated flags before interrupts are enabled. The table above illustrates the priority if multiple modules are enabled. The highest priority module will have control over the pin. Selecting

25

a higher priority pin function with a lower priority function already enabled can cause spurious edges to the lower priority module. Disable all modules that share a pin before enabling another module.

8.2 Device pin assignment

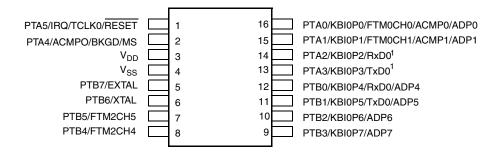

1. True open drain pins

Figure 13. 32-pin LQFP package

Pins in **bold** are not available on less pin-count packages.

1. True open drain pins

Figure 14. 20-pin TSSOP package

Pins in **bold** are not available on less pin-count packages.

9 Revision history

The following table provides a revision history for this document.

Table 17. Revision history

| Rev. No. | Date | Substantial Changes | |
|----------|---------|---|--|
| 0 | 03/2018 | Initial Created | |
| 0.1 | 03/2018 | Updated ordering information. | |
| 1 | 04/2018 | Completed all the TBDs and added 20-pin TSSOP and 16-pin TSSOP packages. | |
| 2 | 01/2019 | Added ACMP module and related information across the whole book. Added Thermal operating requirements. | |
