8-Channel Data Selector

The MC14512B is an 8-channel data selector constructed with MOS P-channel and N-channel enhancement mode devices in a single monolithic structure. This data selector finds primary application in signal multiplexing functions. It may also be used for data routing, digital signal switching, signal gating, and number sequence generation.

- Diode Protection on All Inputs
- Single Supply Operation
- 3-State Output (Logic "1", Logic "0", High Impedance)
- Supply Voltage Range = 3.0 Vdc to 18 Vdc
- Capable of Driving Two Low–power TTL Loads or One Low–power Schottky TTL Load Over the Rated Temperature Range

TRUTH TABLE

X = Don't Care

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high–impedance circuit. For proper operation, V_{in} and V_{out} should be constrained to the range V_{SS} \leq (V_{in} or V_{out}) \leq V_{DD}.

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either V_{SS} or V_{DD}). Unused outputs must be left open.

†To calculate total supply current at loads other than 50 pF:

 $I_T(C_L) = I_T(50 \text{ pF}) + (C_L - 50) \text{ Vfk}$

where: IT is in μ A (per package), CL in pF, V = (V_{DD} - V_{SS}) in volts, f in kHz is input frequency, and k = 0.001.

3-STATE MODE OF OPERATION

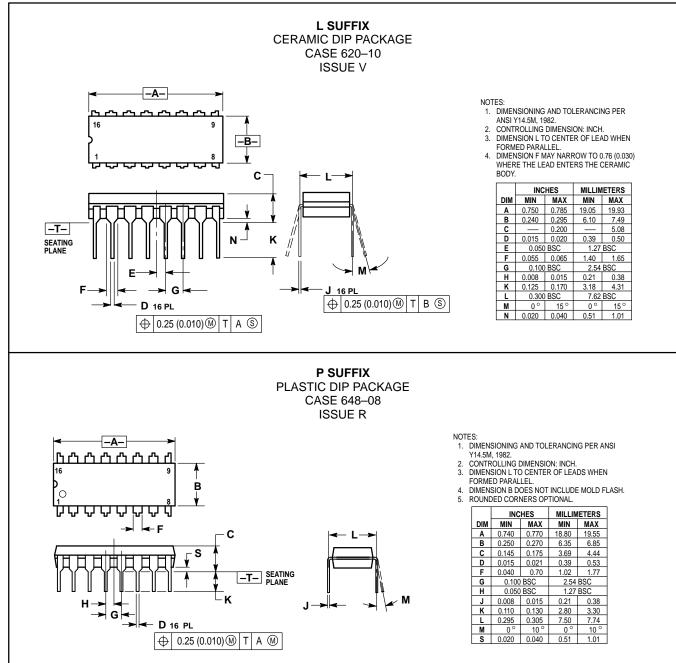

Output terminals of several MC14512B 8–Bit Data Selectors can be connected to a single date bus as shown. One MC14512B is selected by the 3–state control, and the remaining devices are disabled into a high–impedance "off" state. The number of 8–bit data selectors, N, that may be connected to a bus line is determined from the output drive current, I_{OD}, 3–state or disable output leakage current, I_{TL},

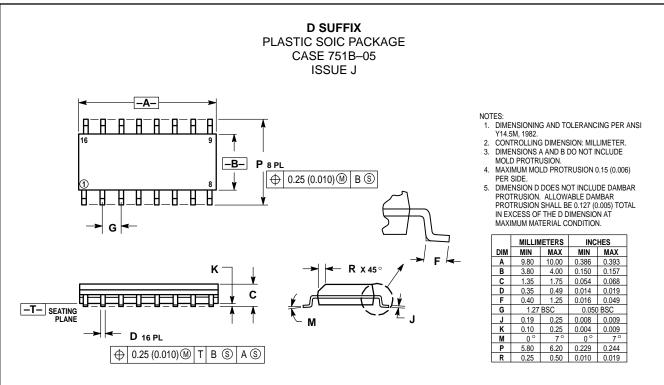

and the load current, IL, required to drive the bus line (including fanout to other device inputs), and can be calculated by:

$$N = \frac{I_{OD} - I_{L}}{I_{TL}} + 1$$

N must be calculated for both high and low logic state of the bus line.
