

# **IT2100F**

The IT2100F employs an analogue ASIC for the oscillator and a high order temperature compensation circuit in a 2.0 x 1.6 mm size package. The device can be placed in power down mode through a single input pin. During standard operation, power consumption is minimised by operating down to a supply voltage of 1.8 V. The IT2100F's high stability, low power consumption, small footprint and powerful compensation method makes it a TCXO ideally suited for demanding GNSS mobile applications.

#### **Features**

- Excellent phase noise performance
- Low start up drift rate
- Height less than 0.8 mm
- Power down mode
- Standard temperature stability of ±0.5 ppm over wide temperature ranges

### **Applications**

- Time and frequency reference
  - GNSS
  - Smartphone
  - Communications
  - Consumer

#### 2.0 x 1.6 mm

## **Standard Specifications**

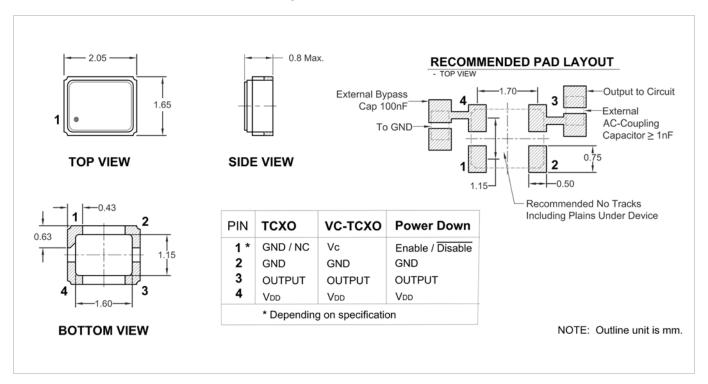

Nominal frequency       13 - 52       MHz         Frequency calibration       ±1       ppm       Offset from nominal frequency measured at 25°C ±2°C         Reflow shift       ±1       ppm       Two consecutive reflows as per attached profile after 2 hours relaxation at 25°C         Operating temperature range       -40       85       °C       The operating temperature range over which the frequency stability is measured         Frequency stability       ±0.5 – ±2       ppm       Referenced to the midpoint between minimum and maximum frequency value over the specified temperature range¹         Frequency slope       ±0.05 – ±2       ppm/°C       Minimum of one frequency reading every 2°C over the operating temperature range¹         Static temperature hysteresis       0.6       ppm       Frequency change after reciprocal temperature ramped over the operating range.
