1 AMP NEGATIVE LOW DROPOUT REGULATOR FOR STEP DOWN CONVERSION

FEATURES

- OUTPUT VOLTAGE SPECIFIED OVER TEMPERATURE RANGE
- EXCELLENT LOAD REGULATION
- GUARANTEED 1A OUTPUT CURRENT
- BUILT IN PROTECTION AGAINST EXCESS TEMPERATURE
- SHORT CIRCUIT PROTECTED

The IP2990 is a 1A low dropout negative voltage regulator available with fixed output voltages of -5, -12, and -15V. It is a true low dropout regulator. The dropout voltage at 1A load current is typically 0.6V and a guaranteed worst-case maximum of 1V over the entire operating temperature range.

The regulator is available in a variety of hermetically sealed packages and has the option of being screened to both JAN and Space levels

- 1) Absolute maximum ratings indicate limits beyond which damage to the component may occur. Electrical specifications do not apply when operating the device outside of its rated operating conditions.
- 2) Dropout voltage is defined as the input-output differential voltage where the regulator output drops to a value that is 100 mV below the value that is measured at $V_{\text{IN}} = 5\text{V}$.
- 3) Exceeding the maximum allowable power dissipation will cause excessive die temperature, and the regulator will go into thermal shutdown.
