

Description

Total power dissipation: Max. 1 W.

Wide zener reverse voltage range 3.3V to 330V.

Small plastic package suitable for surface mounted design.

Absolute Maximum Ratings And Characteristics (Ta=25°C)

PCB Design

For TVS diodes a low-ohmic and low-inductive path to chassis earth is absolutely mandatory in order to achieve good ESD protection. Novices in the area of ESD protection should take following suggestions to heart:

- Do not use stubs, but place the cathode of the TVS diode directly on the signal trace.
- Do not make false economies and save copper for the ground connection.
- Place via holes to ground as close as possible to the anode of the TVS diode.
- Use as many via holes as possible for the ground connection.
- Keep the length of via holes in mind! The longer the more inductance they will have.
