CIRCUIT PROTECTION PRODUCTS CATALOG

2016

- Hybrid Protection
- Overtemperature Protection
- Overvoltage Protection
- Overcurrent Protection

This catalog is intended to present application, product, and technical data to assist the user in selecting circuit protection products, including PolySwitch Polymeric Positive Temperature Coefficient (PPTC) resettable devices, Reflowable Thermal Protection (RTP) devices, Metal Hybrid PPTC (MHP) devices, PolyZen devices, 2Pro devices, Electrostatic Discharge (ESD) protection devices, chip fuses and Gas Discharge Tubes (GDTs).

Information furnished is believed to be accurate and reliable. However, users should independently evaluate the suitability and test each product selected for their own applications. Tyco Electronics Corporation and its affiliates in the TE Connectivity Ltd. Group of companies ("TE") reserves the right to change or update, without notice, any information contained in this publication; to change, without notice, the design, construction, processing, or specification of any product; and to discontinue or limit production or distribution of any product. This publication supersedes and replaces all information previously supplied. Without express written consent by an officer of TE, TE does not authorize the use of any of its products as components in nuclear facility applications, aerospace, or in critical life support devices or systems. TE expressly disclaims all implied warranties regarding the information contained herein, including, but not limited to, any implied warranties of merchantability or fitness for a particular purpose. TE's only obligations are those in the TE Standard Terms and Conditions of Sale and in no case will TE be liable for an incidental, indirect, or consequential damages arising from the sale, resale, use, or misuse of its products.

TE reserves the right to change or update, without notice, any information contained in this catalog; to change, without notice, the design, construction, materials, processing, or specification of any products; and to discontinue or limit production or distribution of any products. This publication supersedes and replaces all information previously supplied.

Without express written consent by an officer of TE, TE does not authorize the use of any of its products as components in nuclear facility applications, aerospace, or in critical life support systems or devices where the failure of the product in the application might be reasonably expected to cause the failure or malfunction of the system or device or to affect its safety or effectiveness. Further, TE does not authorize the use of its products in applications involving permanent surgical implants into the body.

TABLE OF CONTENTS

TE CIRCUIT PROTECTION

TE Connectivity Ltd. (NYSE: TEL) is a $12 billion global technology leader. Our connectivity and sensor solutions are essential in today's increasingly connected world. We collaborate with engineers to transform their concepts into creations – redefining what's possible using intelligent, efficient and high-performing TE products and solutions proven in harsh environments. Our 75,000 people, including 7,300 design engineers, partner with customers in over 150 countries across a wide range of industries.

We believe EVERY CONNECTION COUNTS – www.TE.com.

TE Connectivity's business unit, TE Circuit Protection, began almost 40 years ago as part of Raychem Corporation. From the first, we defined ourselves as industry pioneers in the field of PPTC (polymeric positive temperature coefficient) technology with our PolySwitch product line. Having had patents granted for the use of a PPTC device as a variable resistor in circuit protection applications in the early 1980s, we have continued to expand the PolySwitch family to include wider voltage, current and temperature ranges in a variety of form factors.

Today our circuit protection devices help to make your world safer and your electronics more reliable. Our products can be found in your cellphone, tablet, car, home appliances, LED lighting fixtures and a myriad of other everyday applications.

Overcurrent Protection

- **PolySwitch devices —** PolySwitch PPTC devices provide resettable circuit protection. Device types include: Automotive, Radial-leaded, Strap Battery and Surface-mount Devices (SMDs)
- **Single-use fuses —** These devices are for applications that need to disable the circuit rather than isolate it. The family comprises: Fast-acting Chip, High-current Rated and Slow-blow Chip fuses

Overvoltage Protection

- **Gas discharge tubes (GDTs) —** Low-capacitance GDT devices help protect applications such as telecom and appliances damage from potentially harmful surge events

ESD (Electrostatic Discharge) Protection

- **Polymer ESD (PESD) devices —** Help provide protection for today's highest-speed interface applications (USB, HDMI, DisplayPort, etc.).
- **ChipSESD devices —** Bi-directional, silicon-based devices in 0201 and 0402 sizes are easier to install and re-work than traditional semiconductor-packaged ESD devices

Hybrid Protection

- **PolyZen devices —** Each PolyZen device integrates a precision Zener diode and a PolySwitch PPTC device. Devices are offered in "LS", "YC" and "YM" options to help protect a broad range of applications requiring overcurrent/overvoltage protection
- **2Pro devices —** Combining an MOV and PPTC in a single device helps provide space-efficient protection against overvoltage/overcurrent events. The 2Pro AC device family provides AC-line protection and can offer better space and reliability benefits than discrete solutions

Thermal Protection

- **Metal Hybrid PPTC (MHP) devices —** Combining the best attributes of a PPTC and bimetal breaker in one device helps protect lithium battery applications.
- **Reflowable Thermal Protection (RTP) devices —** The surface-mount-packaged RTP device helps manufacturers dramatically speed assembly time and reduce board space, while helping protect against potential damage from thermal runaway in automotive and industrial designs

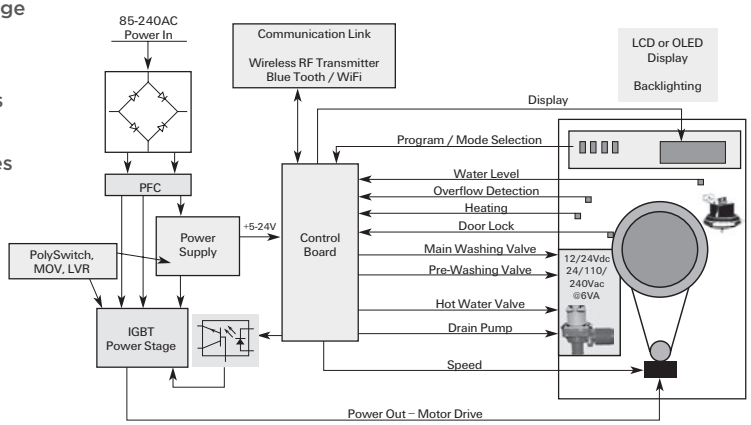
To date, billions of TE Circuit Protection devices are being used to help protect a wide range of electronic products in computer, battery and portable electronics, consumer, automotive, industrial, home appliance, HVAC, and telecommunications applications. Our products help manufacturers meet strict regulatory standards while diminishing warranty returns.

TE Circuit Protection offers a dedicated engineering sales force along with worldwide manufacturing and design centers. Our history in circuit protection, combined with local engineering support, enables us to think globally – and act locally – to meet our customers' needs.

Washing Machines

A number of circuit protection devices can be used to help provide overtemperature, overcurrent and overvoltage protection for the small electric motors, LED displays and control electronics found in home appliances.

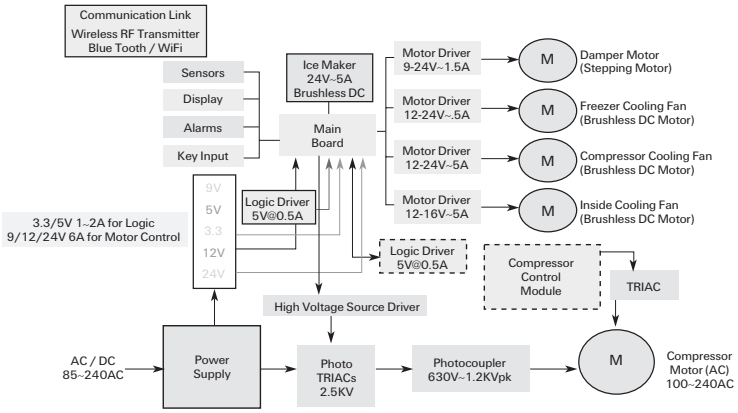
- PolySwitch Line-voltage radial-leaded devices
- PolySwitch Radial-leaded devices
- PolySwitch Surface-mount devices
- ESD devices
- Surface-mount fuses
- GDTs



Refrigerators / Freezers

Our circuit protection devices help protect the small electric motors and fans, controllers, touchpads, displays and interface circuitry required by sophisticated appliances.

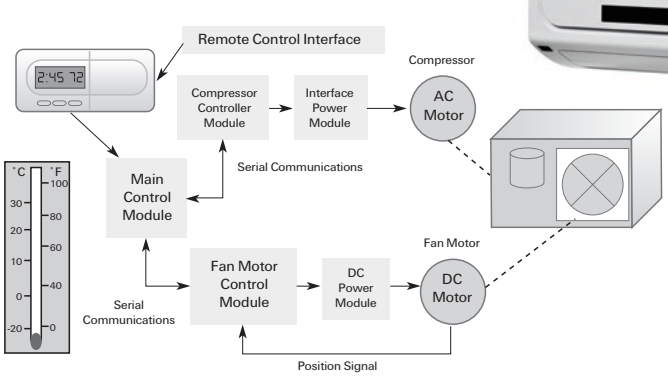
- PolySwitch Line-voltage radial-leaded devices
- PolySwitch Radial-leaded devices
- PolySwitch Surface-mount devices
- ESD devices
- Surface-mount fuses



Air Conditioning Units

Resettable PolySwitch devices, ESD devices and chip fuses help provide coordinated overcurrent and overvoltage protection for the small electric motors, fans, displays and interface circuits used in modern HVAC equipment.

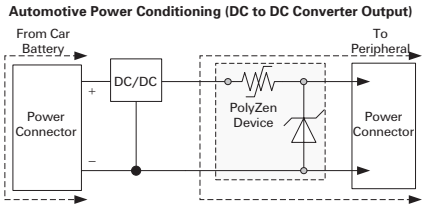
- PolySwitch Line-voltage radial-leaded devices
- PolySwitch Radial-leaded devices
- PolySwitch Surface-mount devices
- ESD devices
- Surface-mount fuses



Automotive Electronics

PolyZen devices help protect automotive electronics and peripherals and/or portable electronics that can be charged in the vehicle from damage caused by inductive voltage spikes, voltage transients and reverse polarity. Providing coordinated overcurrent, overvoltage and reverse polarity protection, the PolySwitch device protects like a Zener diode but is capable of withstanding the high-power fault conditions that can occur in automotive applications.

- **PolyZen devices**

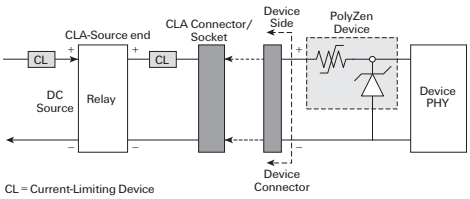


DC Cigarette Lighters and Power Plug Adapters

Charger circuits for mobile phones, iPods, after-market hands-free devices, or other rechargeable battery operated equipment, use connectors to plug into automobile cigarette lighter or power outlets. These assemblies must operate over a wide range of temperatures, charging conditions and in harsh automotive environments.

Typically, overcurrent protection, such as a PolySwitch polymer positive temperature coefficient (PPTC) device, and overvoltage protection are coordinated at the input to the charger to help meet the stringent electrical requirement. A single PolyZen device or PolyZen-AS device can be used to help protect against damage caused by overcurrent, overvoltage, or reverse polarity faults.

- **PolySwitch automotive devices**
- **Surface-mount fuses**
- **PolyZen devices**



Liquid Crystal Display Backlight Heaters

There are an increasing number of displays -- such as navigation systems, instrumentation displays, video and TV screens -- being designed into automobiles. A temperature-sensing PolySwitch PPTC current-limiting device can be employed to help prevent thermal runaway due to a failure in the control circuitry. In most cases, the circuit will be powered off on a regular basis (i.e., when the ignition is turned off) and a resettable PolySwitch device may be desired. In other cases, a single-use RTP (Reflowable Thermal Protector) device or single-use fuse may be perferred.

- **PolySwitch automotive devices**
- **Surface-mount fuses**
- **HCRTP devices**

Driver-Side Door Console

The switch console on the driver-side door allows the driver to control multiple functions, including power windows, side mirrors and power door locks. Small Surface-mount PolySwitch devices help protect low current membrane switches and PCB traces against damage caused by overheating in the event of an overcurrent or short circuit condition. A variety of designs include PolySwitch devices that help protect PCB traces leading to high-current power window motors, as well as low-current delicate carbon membrane microswitches, transistors in LED backlighting circuits and small traces of the side mirror control circuits.

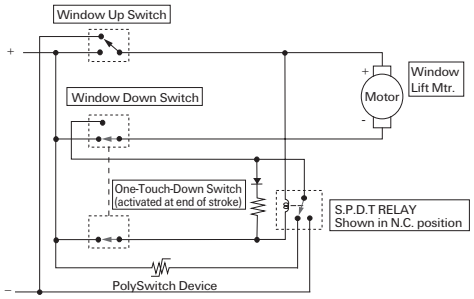
- **PolySwitch automotive devices**
- **Surface-mount fuses**

One-Touch-Down Circuits for Power Windows and Power Sunroofs

Lower cost one-touch-down circuits can employ a PolySwitch PPTC device to function both as a sense component and a switch component. This functionality allows a PolySwitch device to replace a number of other devices, such as the sense resistor, comparator, driver and control circuitry used in traditional power window and sunroof circuits. As a result, designers can help to achieve net cost savings through reduced component count and reduction in wire size.

- **PolySwitch automotive devices**

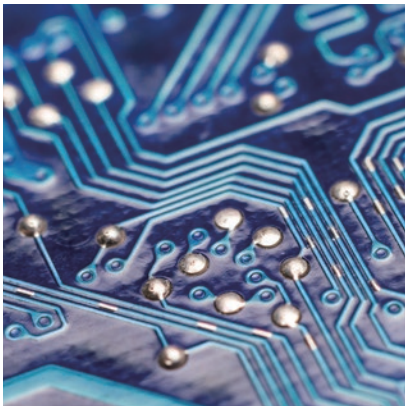
PolySwitch Device Employed in One-Touch-Down Circuit



Printed Circuit Board Traces

The width of the copper traces must be reduced to provide more space for the tighter-packed and smaller printed circuit boards. These "Black Box" control modules handle a large number of high-powered accessories such as power windows, power seat adjusters, remotely controlled door locks, and radio & GPS antennae. PolySwitch resettable devices can be used to help protect these delicate printed circuit board traces against damage caused by overcurrent conditions.

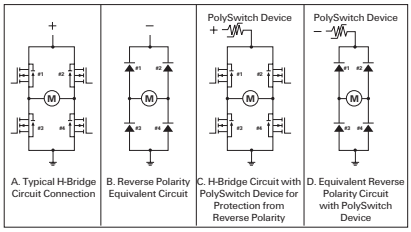
- **PolySwitch automotive devices**
- **Surface-mount fuses**
- **HCRTP devices**



H-Bridge Circuits

Automotive FET switched H-bridges must be protected from reverse polarity power sources. This may occur when jumper cables are connected to the wrong polarity of a dead or excessively discharged battery or when a new battery is installed backwards. Without protection, excessive heating can lead to failures in electronic modules or inadvertent activation of vehicle loads such as solenoids and motors, which can lead to unsafe conditions.

- **PolySwitch automotive devices**
- **HCRTP devices**



Automotive Control Application and Multimedia Busses

Connecting lifestyles from the home to the vehicle has become a reality in the automotive industry. MOST, Flexray, IEEE1394 and other networks now co-exist with CAN and LIN. Their main goal is to facilitate equipment interfacing and information sharing for embedded equipment, while also enabling after-market electronic equipment such as Portable Navigation (PNDs), smart phones, DVD players, etc. In a hot-pluggable automotive environment, where the consumer is connecting and disconnecting peripherals on a powered port, the potential for short-circuit damage is clearly present. PolySwitch devices and ESD protection devices can be used to help protect the connected equipment.

- **PolySwitch automotive devices**
- **Surface-mount fuses**
- **ESD devices**

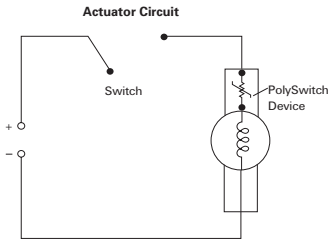
Navigation and Infotainment Systems

Infotainment and navigation systems are packed with electronics and connectivity elements. Circuit protection devices help protect a wide variety of functions such as powered antennae, CAN-bus, touch screen, USB ports, HDMI ports, RF tuners, I/O lines, HDD, etc. Overcurrent and overvoltage protection devices help prevent system breakdown and enhance design safety.

- **PolySwitch automotive devices**
- **ESD devices**
- **Surface-mount fuses**
- **PolyZen devices**

Automotive Actuators and Medium-Size DC Motors

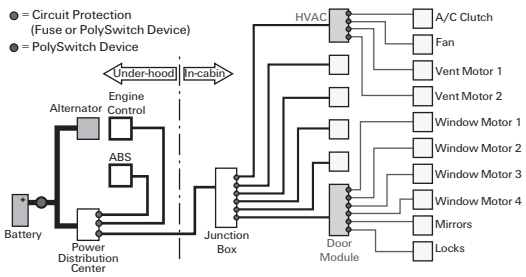
Automotive electric motors can overheat and cause damage to internal temperature sensitive components. To help protect these components, custom and semi-custom PolySwitch devices can be designed to meet specific customer thermal protection needs. Installing a PolySwitch device in close proximity to the motor or solenoid offers the added benefit by limiting current due to excessive heat. In particularly high-current motor applications, such as engine cooling fans, HVAC fans, electric power steering motors and ABS pump motors, the higher currents or continuous duty cycles may be more appropriately supported by the use of an RTP (Reflowable Thermal Protection) device.



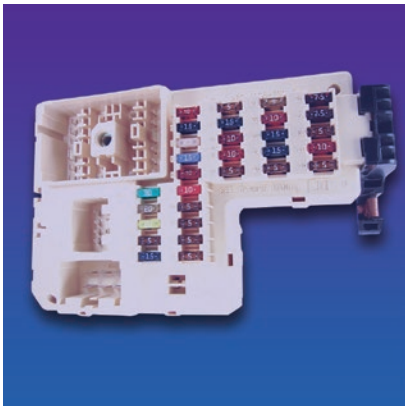
- **PolySwitch automotive devices**
- **Surface-mount fuses**
- **HCRTP devices**

Automobile Harnesses

The wiring harness architectures of light and heavy vehicles have undergone considerable change due to increased electrical and electronic content. PolySwitch PPTC resettable circuit protection devices, which do not require driver accessibility, can be embedded in distributed electronic control modules and power controlling switches throughout the vehicle. This approach of creating separate circuits helps to enable fault isolation as well as the downsizing of wire gauges and PCB traces.



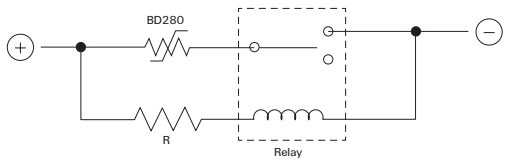
- **PolySwitch automotive devices**
- **Surface-mount fuses**



Automobile Relays

Relay contacts can pit during high current interrupt events. A PolySwitch PPTC device helps reduce current prior to contact switching events. This circuit design becomes a tuned system that uses the normally open contacts and works in coordination with relay inertia. During an overload condition, the relay energizes and latches in the off state. Once the power is cycled and/or the load is removed, the relay de-energizes and the circuit immediately resets and is able to deliver full power. The use of a PolySwitch device in this circuit can help achieve vehicle power outlet protection, but it can also be used to help protect isolated trailer lighting circuits.

- **PolySwitch devices**



Glow Plug ECU

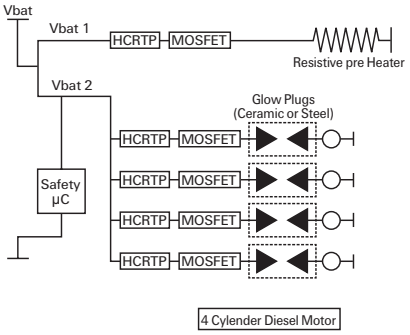
To address the growing need to increase reliability and safety in extremely harsh automotive environments, the HCRTP device is specifically suited to high-current automotive applications such as glow plug electronic control units (ECUs). The robust HCRTP device (model: RTP200HR010SA) can withstand hold currents of up to 90A at room temperature (23°C) and 45A at 140°C.

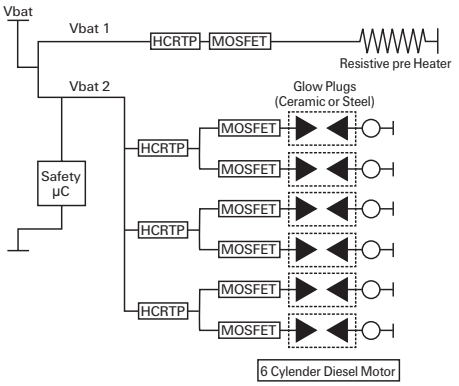
In addition to helping automotive designers comply with stringent AECQ automotive standards, including the AECQ vibration test, the surface-mountable HCRTP device enables cost-effective and simple installation, while also optimizing thermal coupling with the printed circuit board.

Based on the functional safety concept provided by a major OEM, multiple uses for the HCRTP device is possible. For example, in a six-cylinder glow plug ECU application, an HCRTP device can prevent damage from thermal runaway in case of a resistive short on the PCB. Depending on current requirements and the glow plug technology, different arrangements are possible; such as placing one HCRTP device per one FET line or placing two HCRT devices per pair of power FETs.

Furthermore, ceramic glow plugs in particular are distinguished by a long-duration cool down and aggressive inrush currents. Compared to competitive approaches, the ultra-low resistance of the HCRTP device offers benefits in terms of time life and reliability.

- **HCRTP devices**





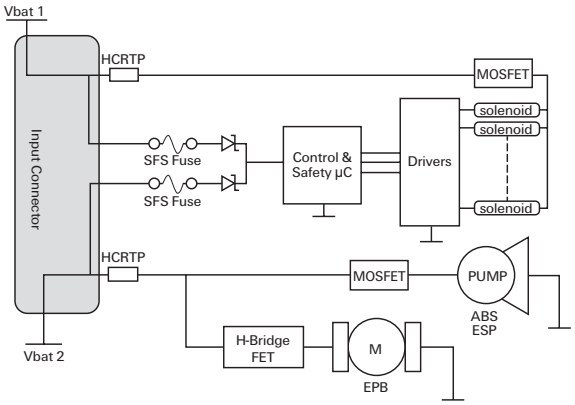
Electrical Brake Systems ABS & EPS

A popular trend in automotive applications is for state-of-the-art ABS modules to integrate an electronic stability control or program (ESC/ESP) as well as an electrical parking brake (EPB) system on the same board. For such high-current applications, some OEMs require a functional safety automotive standard, the ASIL D. To help meet this standard, a secondary, non-active and irreversible thermal fuse can be placed as close as possible to the input connector to avoid thermal propagation outside the vehicle when power FETs, capacitors or other power components fail due to thermal runaway.

As an alternative to typical protection approaches, an HCRTP thermal protection device can be installed near the input connector in two places on the board. Electrical brake systems have two separate power lines that can achieve thermal protection using HCRTP device, one for valves/solenoids and the other for the oil pump motor. This design helps mitigate damage from a power FET failing due to a resistive short – a fault condition that produces severe temperatures through I^2R heating in which the device's resistance rises too high. In each instance, the HCRTP acts as a "one-shot" protect solution that complies with the AECQ vibration test and other automotive standards that mandate the use of thermal protection devices.

For safety reasons, redundant power supplies are required to feed the control IC. Some OEMs mandate the use of an overcurrent protection device in case the dual rectifier diode experiences a short-circuit event. In this case, a slow-blow chip fuse can be used to provide space-saving protection.

- **HCRTP devices**
- **Surface-mount fuses**

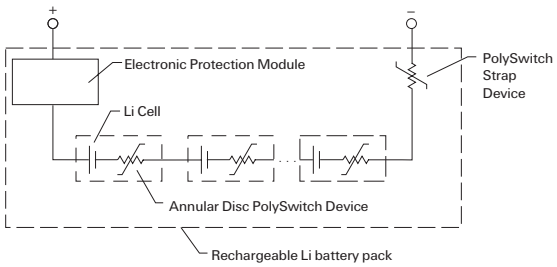


Lithium Cells and Battery Packs

External shorts, runaway charging conditions, or abusive charging can cause considerable damage to primary and secondary lithium (Li) cells. PolySwitch disc and strap circuit protection devices can help protect rechargeable lithium batteries used in notebook computers and cellular phones, as well as other portable electronic applications.

- **PolySwitch strap devices**
- **PolySwitch disc devices**

Typical Rechargeable Lithium Battery Pack Circuit

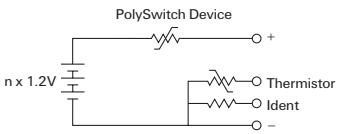


Rechargeable Battery Packs

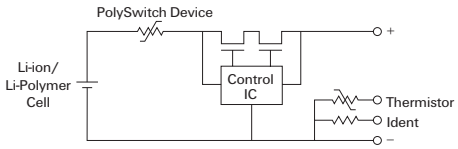
Due to external shorts, runaway charging conditions, or abusive charging, considerable damage can be sustained in both battery cells and pack surroundings. The most common applications for PolySwitch devices are for helping to protect lithium-ion (Li-ion) battery packs used in cellular phones, digital cameras and laptop/notebook computers, or for helping to protect nickel-cadmium (NiCd) and nickel-metal-hydride (NiMH) battery packs used in other portable electronic applications.

- **PolySwitch strap devices**

NiMH/NiCd Battery Pack Circuit Diagram



Single Cell Li-ion/Li-Polymer Battery Pack Circuit Diagram

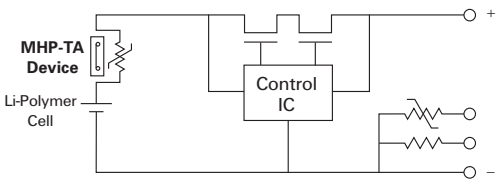


Rechargeable Lithium Polymer Cells

Tablets, ultra-thin notebook PCs and other small portable electronics use high-capacity lithium polymer and prismatic cells that require overtemperature protection to help prevent the cells from overheating. The combination of thin form factors, high cell capacities and high battery discharge rates typical of these applications create a unique set of circuit protection requirements, which are low thermal cut-off temperatures (<90°C), high hold current ratings (>6A) and compact size.

The MHP-TA series of MHP (Metal Hybrid PPTC) devices addresses these design concerns by offering two levels of current carrying capacity (6A or 15A hold current at 25°C) as well as an ultra-thin package (L:5.8mm x W: 3.85mm x H: 1.15mm).

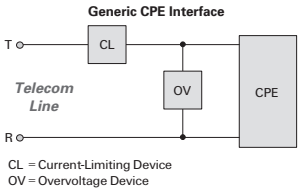
- **MHP devices**

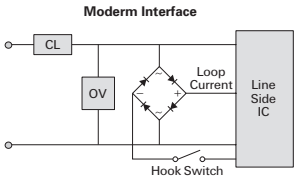


Customer Premise Equipment

To protect subscribers against damage caused by faults entering from outside wiring, customer premise equipment (CPE) is designed with power cross and lightning protection components. The following are recommended circuit protection solutions based on regional requirements.

- PolySwitch Radial-leaded devices
- PolySwitch Surface-mount devices
- PolySwitch telecom devices
- Surface-mount fuses
- GDTs
- 2Pro devices

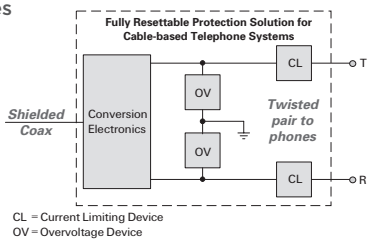


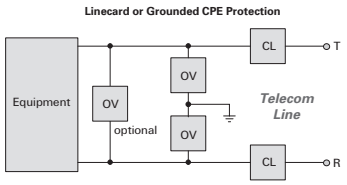


Short-haul/Intrabuilding Protection Requirements

Communications equipment that is not directly connected to the PSTN is subjected to lower level hazards. Here are a few circuit protection recommendations for LAN, WLL, VoIP and other intrabuilding applications.

- PolySwitch telecom devices
- Surface-mount fuses
- GDTs

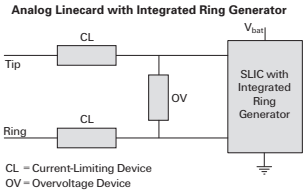


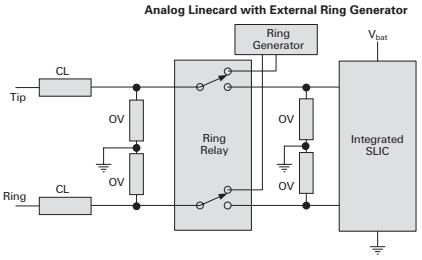


Analog Linecards

Central office linecards are subject to transient overcurrent and overvoltage faults, which may be generated from nearby power cross, power induction and lightning events. Circuit protection recommendations based on regional agency specifications are provided below.

- PolySwitch telecom devices
- Surface-mount fuses
- GDTs

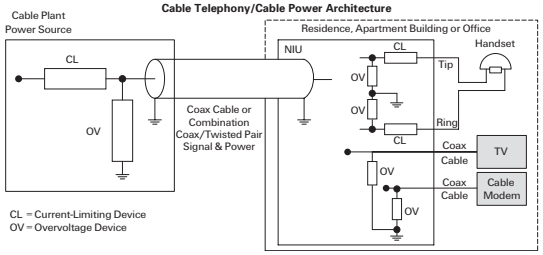


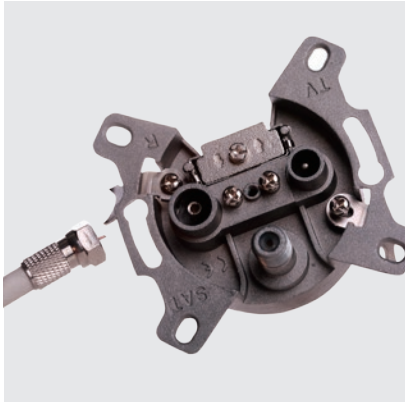


Cable Telephony/Cable Power Passing Taps

Cable telephony electronics that are powered via twisted pair or coaxial cable are susceptible to power faults passed through the cable plant. The circuit protection solutions listed below can help decrease the risk of these faults in power passing taps.

- PolySwitch telecom devices
- Surface-mount fuses
- GDTs

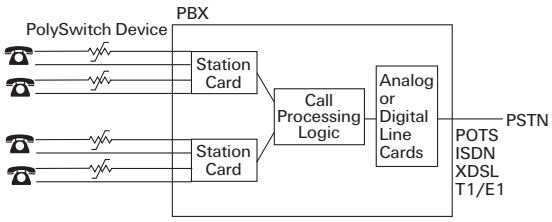




PBX and Key Telephone Systems

Below are circuit protection device recommendations to help protect PBX and key telephone systems against damage caused by power faults and short circuits.

- PolySwitch telecom devices
- Surface-mount fuses
- GDTs



POS Equipment

Equipment connected to telephone lines can be subject to power cross, induction, and lightning surge hazards. We recommend the devices below to help protect scanner motors and ditherers against damage caused by jams and stalls.

- PolySwitch Radial-leaded devices
- PolySwitch Surface-mount devices
- PolySwitch telecom devices
- Surface-mount fuses
- 2Pro devices

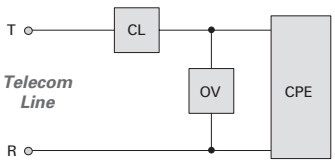
UL60950 and TIA-968-A (formerly FCC part 68) Requirements

The UL60950 and TIA-968-A cover standards electrical hazards from which customer premise equipment (CPE) in North America must be protected. Below are resettable circuit protection recommendations.

- PolySwitch telecom devices
- 2Pro devices
- Surface-mount fuses
- GDTs

Suggested Arrangement to Meet TIA-968-A for a Ungrounded CPE Design



Suggested Arrangement to Meet TIA-968-A for a Grounded CPE Design

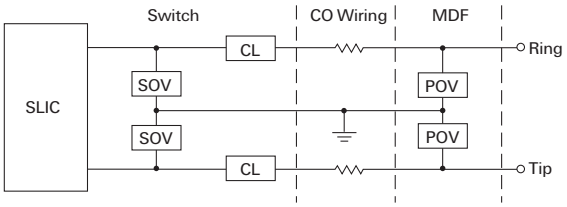
OV = Overvoltage Device

GR-1089 : Public Switched Telephone Network Equipment

GR-1089 describes the electrical hazards which public switched telephone network (PSTN) equipment in North America should be protected against. The figure below shows several recommended resettable circuit protection solutions for a simplified model of the central office end of a subscriber loop system.

- PolySwitch telecom devices
- Surface-mount fuses
- GDTs

Simplified Model of Central Office End of Subscriber Loop



CL = Current-Limiting Device
CO = Central Office
MDF = Main Distribution Frame
POV = Primary Overvoltage Protection Device
SLIC = Subscriber Line Interface Card
SOV = Secondary Overvoltage Protection Device

GR-1089-CORE, Issue 5: Public Switched Telephone Network Equipment

According to the GR-1089-CORE, Issue 5 standard, to help prevent damage to telecom equipment, circuits connected to outside lines generally need protection from lightning and power fault events. The equipment must be able to withstand the surges that the primary protector lets through. For this reason, secondary, and even tertiary, protection is included to help limit the potential damage of the surge let through. To be effective, the secondary protection must coordinate with the primary protection.

TE Circuit Protection offers a broad line of overcurrent and overvoltage devices that can help Public Switched Telephone Networks equipment conserve valuable board space and meet emerging safety and performance standards.

- PolySwitch telecom devices
- Surface-mount fuses
- GDTs

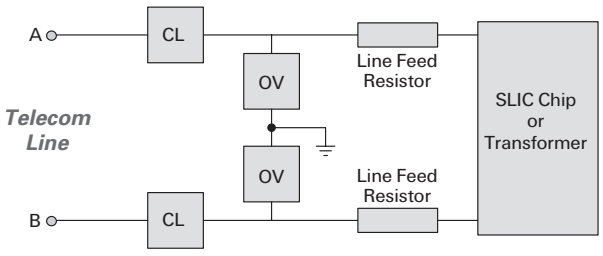
ITU-T Recommendations

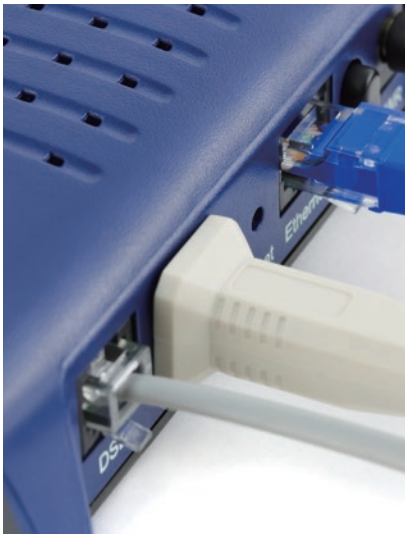
The ITU-T standard lists several recommendations for central office (K.20), customer premise (K.21) and access network (K.45) equipment. Below is an overview of our device recommendations, including resettable circuit protection solutions.

- PolySwitch telecom devices
- Surface-mount fuses
- GDTs

Typical Protection System for Network Equipment



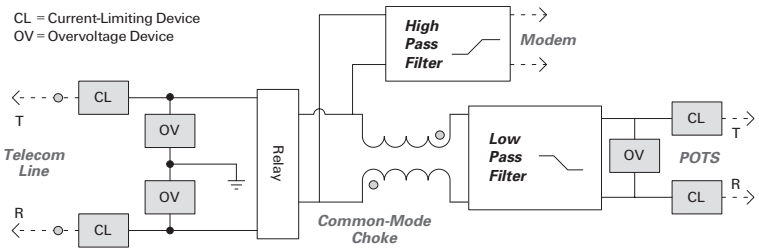
CL = Current-Limiting Device
OV = Overvoltage Device



DSL Equipment

DSL equipment, such as splitters, must be protected against damage caused by both external and intrabuilding faults. Recommendations for resettable protection solutions are provided here, based on regional requirements.

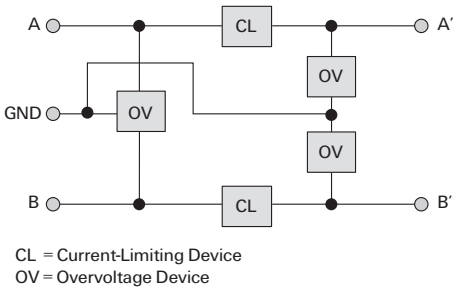
- **PolySwitch telecom devices**
- **Surface-mount fuses**
- **GDTs**

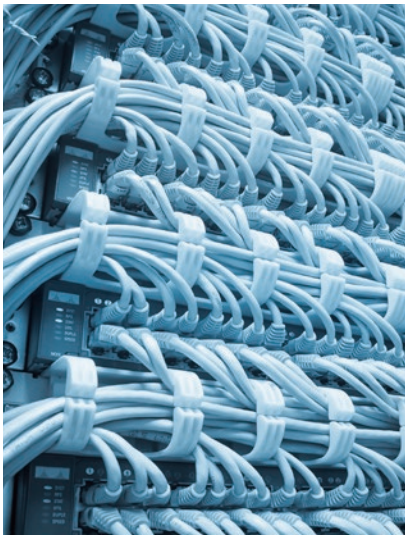


Main Distribution Frame (MDF) Modules

Telecom systems, such as MDF modules, typically have multi-stage circuit protection. Primary protection is used closest to the "outside world" where the highest surge withstand capability is typically needed. Secondary protection is needed to help protect against damage caused by hazardous power cross and lightning faults until the primary protection component activates. The following devices are recommended for helping to protect these systems.

- **PolySwitch telecom devices**
- **Surface-mount fuses**
- **GDTs**

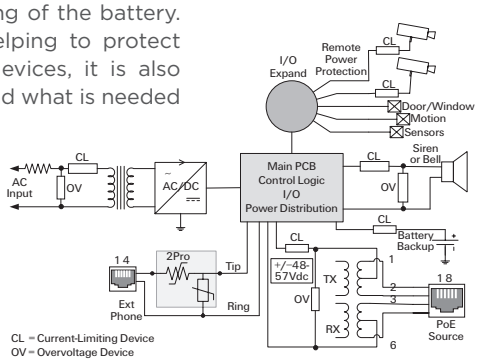




Security and Fire Alarm Systems

Security and fire alarm systems have a need for circuit protection, due to fault conditions experienced by these applications as well as safety requirements. Possible faults include short circuits in the sensor lines or overheating of the battery. The devices below are recommended for helping to protect these systems. When choosing protection devices, it is also important to consider the different currents and what is needed to meet the requirements of UL864.

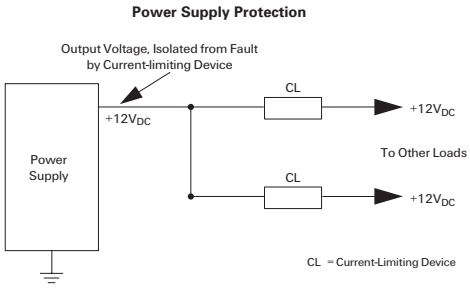
- PolySwitch Radial-leaded devices
- PolySwitch telecom devices
- GDTs
- ESD devices
- 2Pro devices



Test and Measurement Equipment

Power supplies, communication ports, test probes, and battery packs are all vulnerable to overcurrent faults and and electrostatic discharge (ESD). Incorrect termination of outputs may lead to system damage.

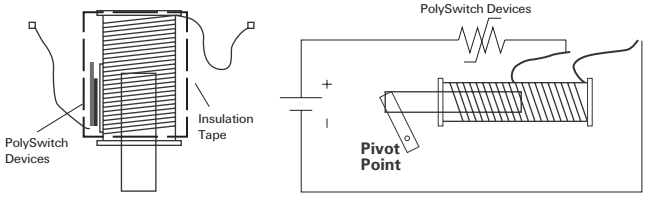
- PolySwitch Radial-leaded devices
- PolySwitch Surface-mount devices
- PolySwitch telecom devices
- ESD devices
- Surface-mount fuses
- PolyZen devices

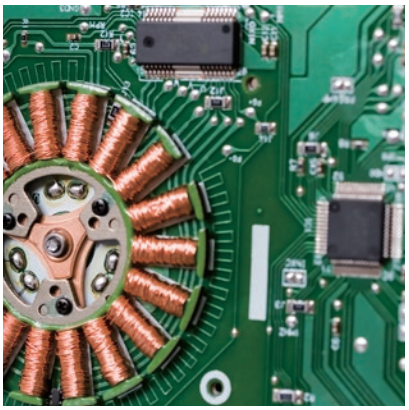


Solenoids

Solenoids are used in various PC and peripheral applications such as printer feed trays and CD/CD-RW/DVD tray mechanisms. A PolySwitch device can be used to help protect the coil assembly of the solenoid when a sensor fails or if the armature fails to retract, thus causing the coil temperature to increase and burn out the coil wire.

- PolySwitch Radial-leaded devices
- PolySwitch Surface-mount devices
- Surface-mount fuses

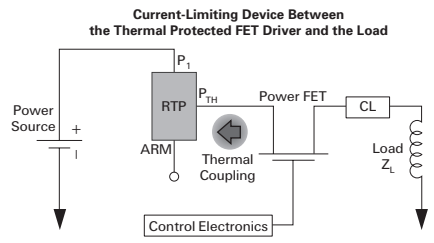




Electromagnetic Loads

Electromagnetic loads can be susceptible to many problems. Incorrect use of solenoids, valves and motors can potentially lead to device failure and circuit damage. The devices below are recommended as circuit protection solutions for these applications.

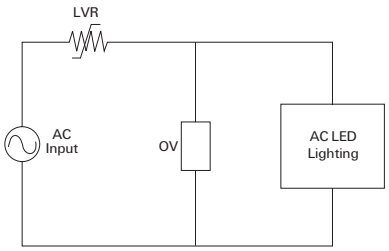
- PolySwitch Radial-leaded devices
- PolySwitch Surface-mount devices
- Surface-mount fuses
- HCRTP devices



Protection for AC LEDs

Lighting fixtures powered by AC power can be put at risk from high voltage or power transients due to lightning strikes, load switching transients and their associated surge currents. We recommend the following circuit protection devices to help protect AC LEDs.

- **PolySwitch Line-voltage-rated**
- **PolySwitch Surface-mount devices**
- **2Pro devices**



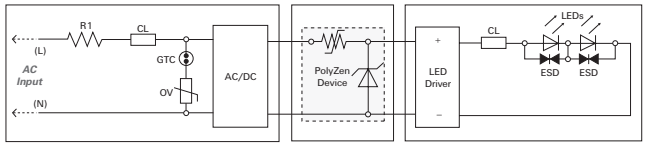
OV = Overvoltage Device

Protection for DC Solid State Lighting (SSL)/LED Lighting

LED driver integrated circuits (ICs) used in many LED applications require a protected DC input to provide a regulated-current output to the LED. Listed below are devices that help protect these lighting applications.

A PolySwitch device placed in series with the LED driver IC and combined with a parallel voltage-limiting device, such as a Zener or transient suppression diode, can help provide effective protection against damage caused by faulty DC input voltages. A PolyZen device with an integrated PolySwitch PPTC device and Zener diode help provide both protection capabilities in one package.

- **PolyZen devices**
- **PolySwitch Radial-leaded devices**
- **GDTs**
- **Surface-mount fuses**
- **ESD devices**



CL = Current Limiting Device
OV = Overvoltage Device

CFL Electronic Ballasts

There are two types of ballasts in compact fluorescent lamps (CFLs): electronic ballasts and magnetic ballasts. The electronic ballasts help prevent the fluorescent light from flickering when turning on. The electronic ballasts are more delicate and can be at risk from high-voltage or power transients due to lightning strikes, load switching transients and their associated surge currents.

A PolySwitch device helps provide effective protection for the electronic components inside the ballast against damage caused by faulty transients. TE Circuit Protection's 2Pro device and surface-mount fuses also help to provide effective protection in CFL ballasts.

- **2Pro devices**
- **Surface-mount fuses**

Street Lighting Electronic Ballasts

Lighting ballasts for street lighting can be at risk from high-voltage or power transients due to lightning strikes, load switching transients and their associated surge currents.

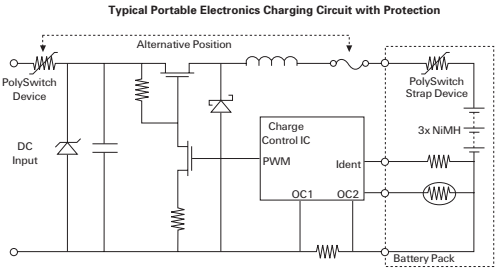
A PolySwitch device in series with the LED driver IC, and combined with a parallel voltage limiting device such as metal oxide varistors, can help provide effective protection against damage caused by faulty transients. Our recommended devices for street lighting also include the following:

- **PolySwitch Telecom devices**
- **Telecom fuses**
- **GDTs**

Portable Electronics Input Ports

The use of an incorrect or faulty adapter/charger can irreparably damage unprotected portable electronics equipment. Typical applications include cell phones, digital cameras, and tablets. The devices listed below are recommended for these applications.

- **PolySwitch Surface-mount devices**
- **Surface-mount fuses**
- **PolyZen devices**

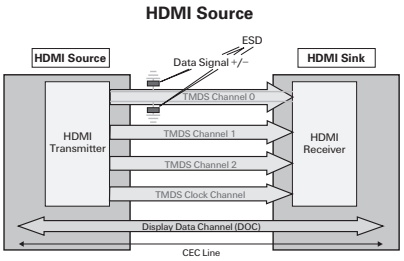


HDMI: LCD & Plasma Displays, HDTVs, Set-top Boxes, DVD Players

High definition multimedia interface (HDMI) applications, such as LCD displays, plasma displays, high-definition television set-top boxes and DVD players, are susceptible to electrostatic discharge (ESD devices). To help protect the high-speed TMDS lines against damage caused by our ESD or SESD protection devices can be used two-per-line in HDMI designs.

- **PolySwitch Surface-mount devices**
- **ESD devices**
- **Surface-mount fuses**
- **PolyZen devices**

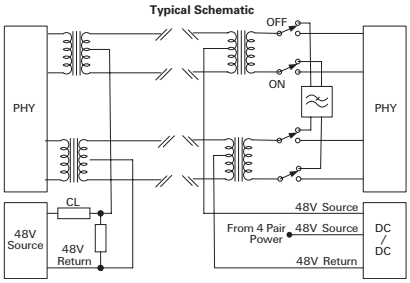
Note: HDMI 1.3 reference layout, whitepaper and testing results available upon request



IEEE 802.3 Ethernet LAN (Powered Ethernet)

The auxiliary unit interface (AUI) consists of signal circuits, power and ground. Per the IEEE 802.3 standard, the Voltage Plus circuit is capable of operating at 12-15VDC for currents up to 500mA. In addition, per section 7.5.2.5, the source shall provide protection for this circuit against damage caused by an overload condition. Powering IP devices such IP phones over the Ethernet cable introduces the potential for a short circuit and/or FET failure, causing service interruption. Devices recommended for circuit protection are:

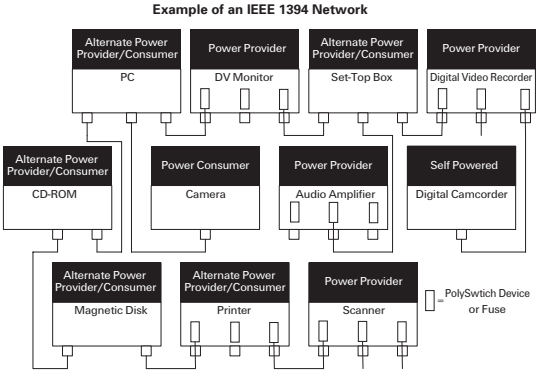
- **PolySwitch Radial-leaded devices**
- **PolySwitch Surface-mount devices**
- **Surface-mount fuses**



IEEE 1394: FireWire, i.Link

The IEEE 1394's complex power architecture provides up to 1.5A at voltages of 8-33V. PolySwitch devices help provide short-circuit protection in this high-power, hot-plugging environment.

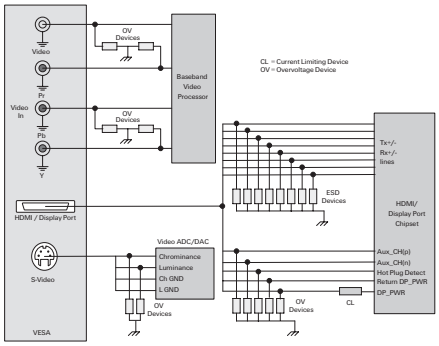
- **PolySwitch Radial-leaded devices**
- **PolySwitch Surface-mount devices**
- **Surface-mount fuses**



Video Ports: VESA, DDC, DVI, HDMI, DisplayPort

PolySwitch devices help protect video ports on PCI video cards and motherboard video ports from faults on the 5V interface line in Display Data Channel (DDC) circuits. These ports are designed for Energy Star compliance. TE Circuit Protection devices suitable for these applications include:

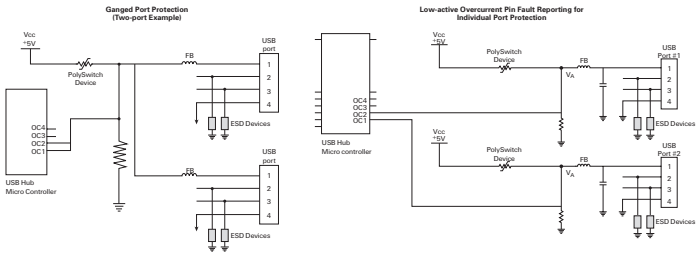
- **PolySwitch Radial-leaded devices**
- **PolySwitch Surface-mount devices**
- **Surface-mount fuses**
- **PolyZen devices**
- **ESD devices**



Universal Serial Bus (USB)

PolySwitch devices help provide short-circuit protection in this hot-plugging environment for USB hosts, self-powered and bus-powered hubs. Recommended circuit protection devices are:

- **PolySwitch Radial-leaded devices**
- **PolySwitch Surface-mount devices**
- **Surface-mount fuses**
- **PolyZen devices**
- **ESD devices**



Audio Input/Output Ports

ESD protection devices can help protect analog audio ports from electrostatic discharge (ESD) during installation, or any time the user disconnects the source from the receiver. Additionally, our PolySwitch surface-mount devices and surface-mount fuses can be used.

- **ESD devices**
- **Surface-mount PolySwitch devices**
- **Surface-mount fuses**

Power Input

PolySwitch devices help protect against overcurrent and overtemperature fault conditions by limiting the flow of current in the DC input power port circuit. Surface-mount fuses and PolyZen devices are also recommended for this application.

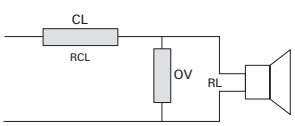
- **Surface-mount fuses**
- **PolyZen devices**
- **Surface-mount PolySwitch devices**

Loudspeakers

High-powered amplifiers used with low-powered speakers may overdrive the speaker coils with excessive power during sustained high volumes. Low-powered amplifiers may be overdriven so that clipping occurs. This causes an upward frequency shift of power that can overload the tweeters. Digital recordings, with their ability to reproduce high-frequency material, place extra strain on tweeters. TE Circuit Protection devices, including PolySwitch devices, can help the design engineer solve these problems.

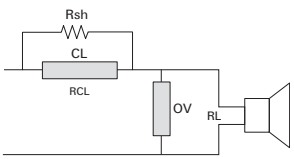
- **PolySwitch Radial-leaded devices**
- **Surface-mount fuses**
- **PolyZen devices**

Typical Circuit



CL = Current-Limiting Device
OV = Overvoltage Device

Shunt Resistor Circuit

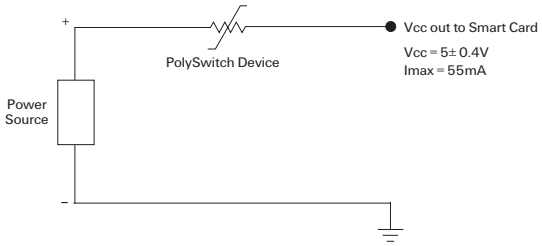


Smart Card Readers

Smart cards are powered from the readers' Vcc output. Defective cards or foreign objects placed into the reader can cause a short circuit and permanently damage the reader. The PolySwitch device can be used for circuit protection in smart card reader designs.

- **PolySwitch Surface-mount devices**

Smart Card Reader Schematic

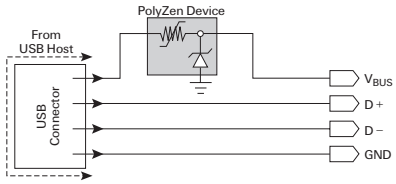


USB Peripherals

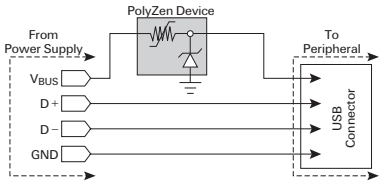
PolyZen devices can help protect against damage caused by overvoltage on USB peripherals and devices on the 5V computer bus. The component helps protect sensitive follow-on electrics — such as flash memory and other 6V capable silicon — from inductive voltage spikes, incorrect power supplies, dirty power and other voltage transients. The RoHS-compliant device offers massive power-handling in a 4mm package. PolyZen devices and ESD protection devices are also suitable for this application.

- **PolySwitch Surface-mount devices**
- **PolyZen devices**
- **ESD devices**

Typical Circuit – USB Peripherals



USB Power Conditioning (Host, Hub, Remote Charger)

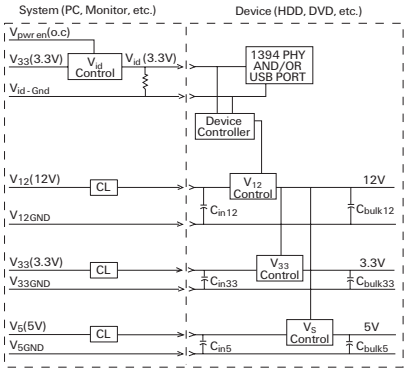


Backplane and Redundant Array of Inexpensive Disks (RAID)

Power backplane applications allow for field-serviceable and field-replaceable cards and drives to maximize the "up-time" of products. During card or drive replacements, the power on the backplane is live. The circuit protection devices listed below can be employed to help minimize safety risks, comply with the IEC60950 safety requirement (clause 1.2.8.7 – Hazardous Energy Levels), and to help protect against short-circuit damage caused by cards being incorrectly inserted.

- **PolySwitch Radial-leaded devices**
- **PolySwitch Surface-mount devices**
- **Surface-mount fuses**

Typical Schematic



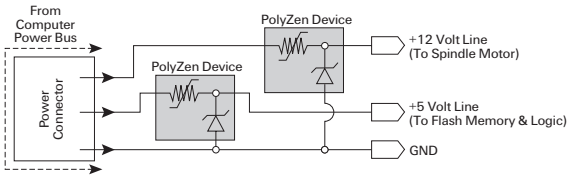
CL = Current-Limiting Device

Hard Disk Drives (HDDs)

Integrated PolyZen devices can help protect devices on the 5V and 12V computer bus from overvoltage events and inductive voltage spikes resulting from a rapid change in current. The PolyZen device incorporates a stable Zener diode for precise voltage clamping and a resistively non-linear, polymer positive temperature coefficient (PPTC) layer that responds to either diode heating or overcurrent events by transitioning from a low to a high resistance state. This unique device helps manufacturers meet safety requirements and reduce warranty costs. In addition to the PolyZen device, the following circuit protection products are recommended for HDDs.

- **PolySwitch Surface-mount devices**
- **PolyZen devices**
- **Surface-mount fuses**
- **ESD devices**

Typical Circuit – Hard Disc Drive

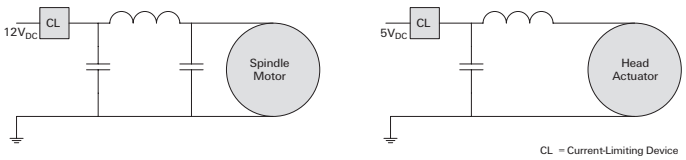


5V/12V Power Lines

The connection of a 12V line from the power supply instead of a 5V line can cause a high-current inrush that can damage the other components in the circuit. Reverse polarity can cause damage to the tantalum capacitors, causing the capacitor to fail in a short-circuit mode. Applications suitable for the circuit protection devices listed below include hard disk drives, CD-ROM, CD-RW, DVD and other storage devices.

- **PolySwitch Radial-leaded devices**
- **PolySwitch Surface-mount devices**
- **Surface-mount fuses**
- **PolyZen devices**

Protection for Disk Drives

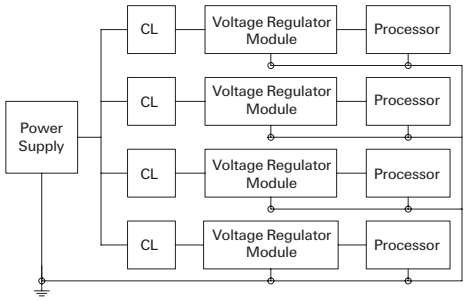


CL = Current-Limiting Device

Voltage Regulation Modules (VRMs)

Voltage regulation modules (VRMs) are used to supply power to central processing units. Due to load-change transients, processors can draw up to 13A. Also, during normal operation the current demand can change by as much as 7A as processor activity levels change. These high-current immediate demands can cause components to fail. The following Circuit Protection can help prevent the VRM from damaging the processor in the event of a VRM failure.

- **PolySwitch Radial-leaded devices**
- **PolySwitch Surface-mount devices**
- **Surface-mount fuses**



CL = Current-Limiting Device

Device Bays

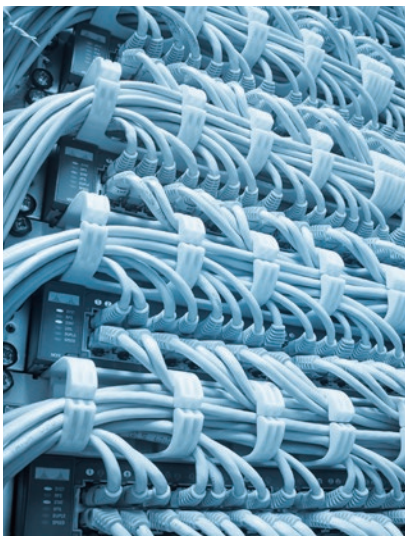
The specifications for hot-swappable bays used in high-availability applications, such as servers and industrial computers, typically recommend overcurrent protection. An externally accessible port such as IEEE1394 or USB may also be used. The devices below are recommended for hot-swappable bay designs.

- **PolySwitch Radial-leaded devices**
- **PolySwitch Surface-mount devices**
- **Surface-mount fuses**

Fibre Channel

A fault, such as a short circuit, that occurs during testing or hot-swapping a peripheral component interconnect (PCI) card can cause significant damage. Incorrect insertion of the gigabit interface converter (GBIC) or a foreign object placed into the connector can also cause permanent damage to the system. Protection on the PCI bus input is typically used as well as a secondary protector for the GBIC I/O. We recommend the following TE Circuit Protection devices for this application.

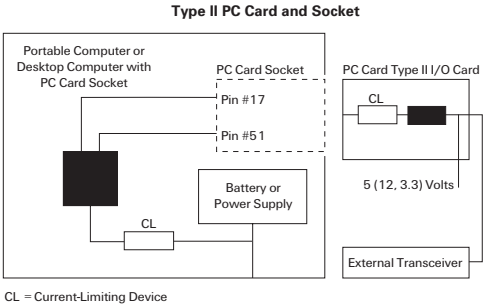
- **PolySwitch Radial-leaded devices**
- **PolySwitch Surface-mount devices**
- **Surface-mount fuses**



PC Cards and Sockets

Short circuits from external sources are the primary hazards for PC cards. The devices below can help protect against large current inrushes that can damage the PC card or the PC card bus.

- PolySwitch Radial-leaded devices
- PolySwitch Surface-mount devices
- Surface-mount fuses
- ESD devices
- PolyZen devices



Motherboard Components

Since power-sensitive computer electronics such as flash memory can be exposed to voltages well in excess of the bus voltage, they require protection. Voltage spikes can result from a hot disconnect of a peripheral, an internal system shutdown or other internal power fluctuation. The integrated PolyZen device protects like a Zener diode while being capable of withstanding the high-power fault conditions that can occur in computer electronics. A coordinated protection scheme using the devices below is recommended as a solution in this application.

- PolySwitch Surface-mount devices
- Surface-mount fuses
- ESD devices

Antennas

When used in antenna applications, PolySwitch devices can help limit the flow of dangerously high currents during fault conditions. As resettable polymer positive temperature coefficient (PPTC) devices, PolySwitch devices can reset back to normal operating mode once the fault condition is removed.

- PolySwitch Surface-mount devices

LCD Monitors

Power for LCD monitors is supplied from the 5V and 12V buses. The LCD controller itself and the surrounding controller logic are powered from the 5V bus. The LCD inverter and the electronics on the board are powered from the 12V bus. Misconnections and mishandling of the monitors during assembly or while in use can cause large overloads and short circuits in the system, damaging expensive components. For this reason, the following TE Circuit Protection devices are recommended for LCD monitor applications.

- **PolySwitch Radial-leaded devices**
- **PolySwitch Surface-mount devices**
- **Surface-mount fuses**
- **ESD devices**

Displays

PolySwitch resettable devices can be thermally linked to the LCD glass. They can protect the power module if the control circuitry fails to turn off the element and help prevent thermal runaway. The following devices are suitable for use in display applications:

- **PolySwitch Radial-leaded devices**
- **PolySwitch Surface-mount devices**
- **Surface-mount fuses**
- **ESD devices**

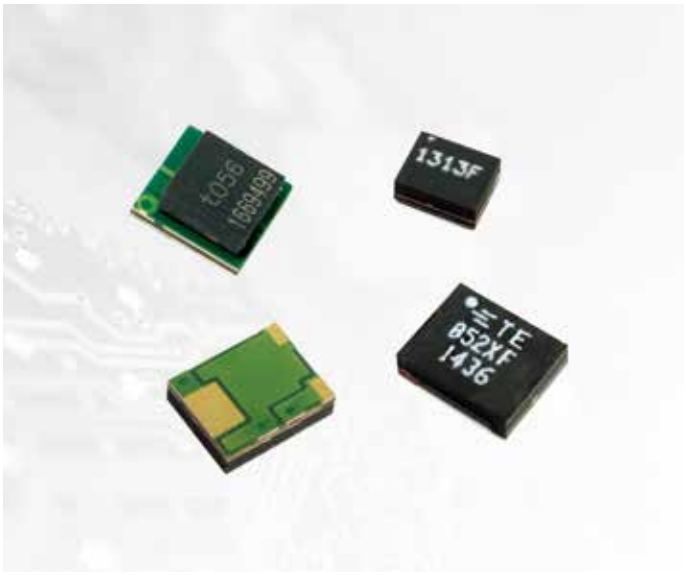
POLYZEN DEVICES
Polymer Protected Zener Diode

PolyZen devices are polymer-enhanced, precision Zener diodes. They offer resettable protection against multi-Watt fault events without the need for multi-Watt heat sinks.

The Zener diode used for voltage clamping a PolyZen device was selected due to its relatively flat voltage vs. current response. This helps improve output voltage clamping, even when input voltage is high and diode currents are large.

An advanced feature of the PolyZen device is that the Zener diode is thermally coupled to a resistively non-linear, PPTC (polymer positive temperature coefficient) layer. This PPTC layer is fully integrated into the device and is electrically in series between V_{IN} and the diode clamped V_{OUT}.



This advanced PPTC layer responds to either extended diode heating or overcurrent events by transitioning from a low to high resistance state, also known as “tripping.” A tripped PPTC will limit current and generate voltage drop. It helps to protect both the Zener diode and the follow-on electronics and effectively increases the diode’s power handling capability.

The polymer-enhanced Zener diode helps protect sensitive portable electronics from damage caused by inductive voltage spikes, voltage transients, incorrect power supplies and reverse bias. These devices are particularly suitable for portable electronics and other low-power DC devices.

BENEFITS

- Stable Zener diode helps shield downstream electronics from overvoltage and reverse bias
- Trip events shut out overvoltage and reverse bias sources
- Analog nature of trip events helps minimize damage from upstream inductive spikes
- Minimal power dissipation requirements
- Single component placement

APPLICATIONS

- DC power port protection in portable electronics
- DC power port protection for systems using barrel jacks for power input
- Internal overvoltage and transient suppression
- DC output voltage regulation
- Tablet PCs and portable electronics

FEATURES

- Overvoltage transient suppression
- Stable V_Z vs. fault current
- Time delayed, overvoltage trip
- Time delayed, reverse bias trip
- Multi-Watt power handling capability
- Integrated device construction
- RoHS compliant
- Halogen free
  (refers to: Br≤900ppm, Cl≤900ppm, Br+Cl≤1500ppm)

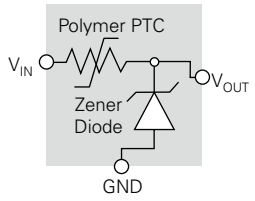
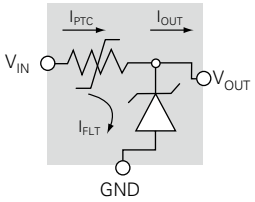
LS module height is 1.7mm typical. YM module height is 1.2mm typical. YC module height is 1.3mm typical.
† Typical operating current is 500µA @ 5.0V which meets USB suspend mode requirement.

Table PZ2 — Definition of Terms

V_Z	Zener clamping voltage measured at current I_{ZT} and 20°C.
I_{ZT}	Test current at which V_Z is measured.
I_{HOLD}	Maximum steady state current I_{PTC} that will not generate a trip event at the specified temperature. Ratings assume I_{FLT} = 0A.
R_{Typ}	Typical resistance between V_{IN} and V_{OUT} pins when the device is at room temperature.
R_{1MAX}	The maximum resistance between V_{IN} and V_{OUT} pins, at room temperature, one hour after first trip or after reflow soldering.
I_{FLT}	Current flowing through the Zener diode.
$I_{FLT\ MAX}$	Maximum RMS fault current the Zener diode component of the device can withstand and remain resettable; testing is conducted at rated voltage with no load connected to V_{OUT}.
$V_{INT\ MAX}$	The voltage (V_{IN} - V_{OUT} "post trip") at which typical qualification devices (98% devices, 95% confidence) survived at least 100 trip cycles and 24 hours trip endurance when "tripped" at the specified voltage and current (I_{PTC}).
I_{PTC}	Current flowing through the PPTC portion of the circuit.
I_{OUT}	Current flowing out the V_{OUT} pin of the device.
Trip Event	A condition where the PPTC transitions to a high resistance state, thereby limiting I_{PTC}, and significantly increasing the voltage drop between V_{IN} and V_{OUT}.





RoHS Compliant, ELV Compliant

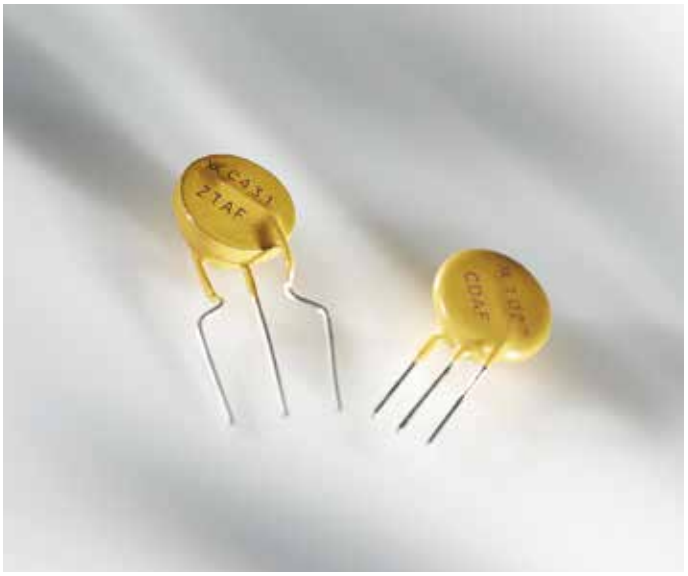
2PRO DEVICES

The 2Pro product is an integrated overcurrent/over-voltage protection device. The RoHS-compliant component incorporates PolySwitch PPTC (Polymeric Positive Temperature Coefficient) technology and MOV (Metal Oxide Varistor) technology in a single device to help reduce board space requirements and component count.

Damage to telephony communications equipment can be caused by various sources including lightning, electrostatic discharge (ESD), power contact and induction with AC lines. The 2Pro TM2P-10271 devices help provide current limiting during overcurrent events and voltage clamping during overvoltage events. After a fault condition is removed and power is cycled, 2Pro devices will reset so that the equipment remains operational.



The 2Pro device helps address the need for resettable circuit protection devices for use in cost-sensitive PSTN (Public Switched Telephone Network) and VoIP (Voice over Internet Protocol) telephony equipment. The widespread use of VoIP gateways in homes and enterprise environments as the primary means of voice delivery requires the utmost safety and reliability in equipment. 2Pro circuit protection devices help manufacturers comply with global safety standards, including UL 60950, TIA-968-A, IEC 60950 and ITU-T K.20/K.21. The UL 497A listed protector also helps provide ESD protection.

BENEFITS

- Single device helps reduce component count and footprint
- Helps reduce warranty returns
- Helps equipment comply with surge tests per: TIA-968-A, IEC 60950, ITU-T K.20/K.21
- Helps simplify UL 60950 testing
- Helps equipment comply with UL 60950

FEATURES

- RoHS compliant
- Halogen free
  (refers to: Br≤900ppm, Cl≤900ppm, Br+Cl≤1500ppm)
- Single overcurrent, overvoltage and ESD protection device
- Resettable overcurrent protection
- UL 497A listed protector (#E258475)

APPLICATIONS

- Cordless telephones
- VoIP gateways
- Fax machines
- Data modems
- Set-top boxes
- Security systems
- MDF modules
- Analog and ISDN linecards

Wave Soldering and Rework Recommendations

Recommended Wave Soldering for Radial-leaded Devices

- Soldering temperature profile (Temperature characteristic at component terminal with dual wave soldering)

Rework

- If a device is removed from the board, it should be discarded and replaced with a new device

Figure 2P5

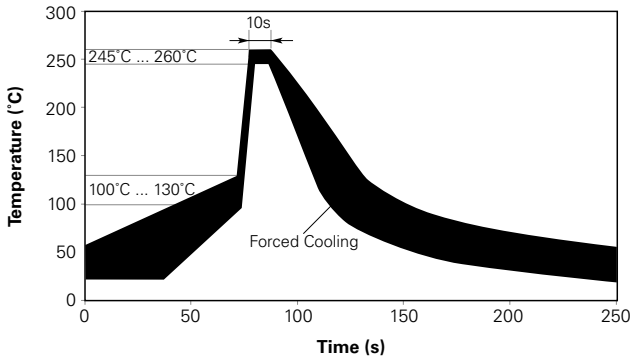

Table 2P6 — Tape and Reel Specifications in Millimeters (mm)

2Pro devices are available in tape and reel packaging per EIA 468-B standard. See Figures 2P6 and 2P7 for details.

Description	EIA Mark	IEC Mark	Dimension (mm)	Tolerance

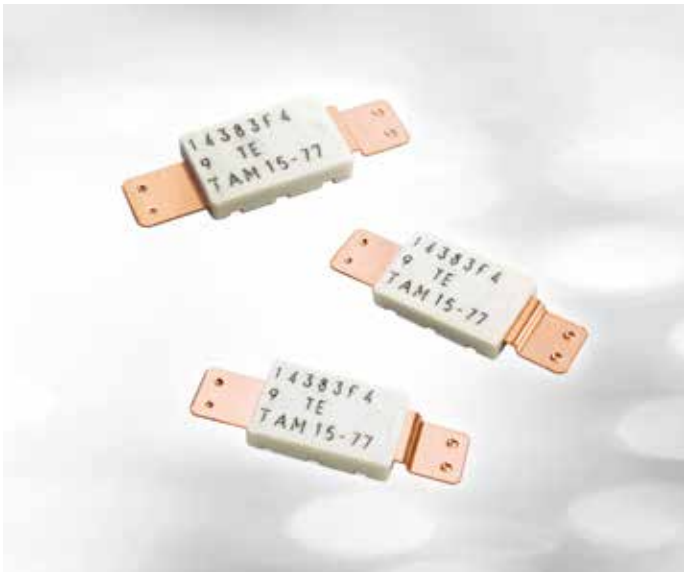
MHP-TAM DEVICES:
MHP with Thermal Activation

The rapidly expanding market for ultra-thin portable electronic devices, such as media tablets and ultra-thin PCs, has created demand for very thin, low-profile, lightweight and high-capacity Lithium Polymer (LiP) and prismatic cells.

A new MHP (Metal Hybrid PPTC) device, the MHP-TAM device, offers a $9V_{DC}$ rating and a higher current rating than typical battery strap devices. This helps them meet the battery safety requirements of higher-capacity LiP and prismatic batteries found in the latest tablet and ultra-thin computing products. Hybrid MHP technology connects a bimetal protector in parallel with a PPTC (polymeric positive temperature coefficient) device. The resulting MHP-TAM (Thermal Activation) series helps provide resettable overtemperature protection, while utilizing the PPTC device to act as a heater and to help keep the bimetal latched until the fault is removed.



BENEFITS

- Capable of handling the higher voltages and battery discharge rates found in high-capacity LiP and prismatic cell applications
- Helps provide resettable overtemperature protection in high-capacity LiP and prismatic cell applications

FEATURES

- $9V_{DC}$ rating
- Two levels of current carrying capacity:
  - Low current (nominal 6A hold current @25°C)
  - High current (nominal 15A hold current @25°C)
- Multiple activation temperature ratings (72°C, 77°C, 82°C, 85°C, 90°C)
- Compact size (L: 5.8mm x W: 3.85mm x H: 1.15mm) allows for ultra-thin battery pack designs

APPLICATIONS

Battery cell protection for high-capacity Lithium Polymer and prismatic cells used in:

- Notebook PCs
- Ultra-book
- Tablets
- Smart phones

Table M1 — Electrical Characteristics for MHP-TAM15 Series

	Rating [°C]	Operation Temperature [°C]		Reset Temperature [°C]		Reference Resistance [mohms] 25°C	
Model Number	Nominal	Min	Max	Min	△T	Typ	Max

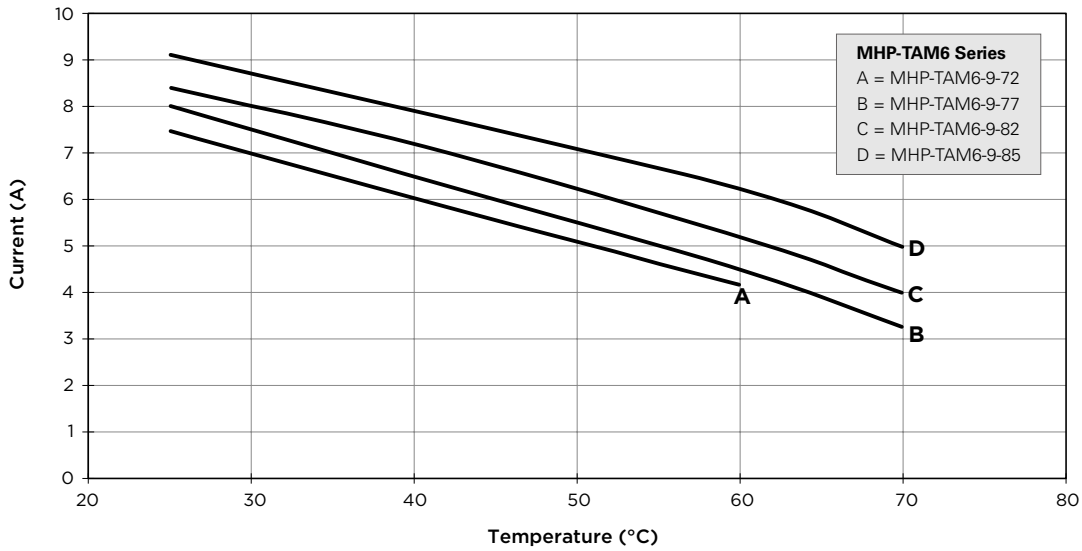

Figure M2

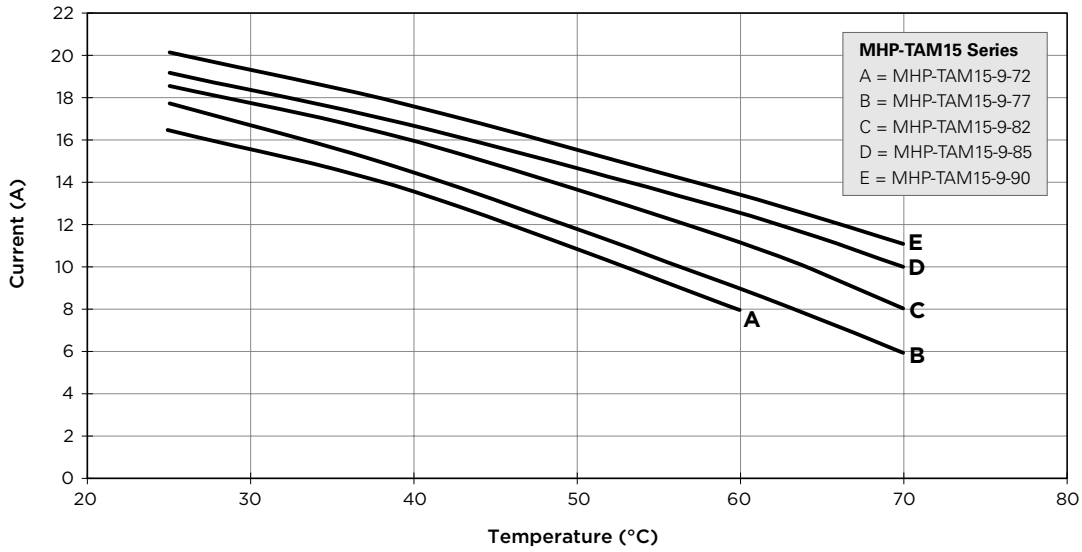

Physical Characteristics

Terminals	Copper Alloy
Molding Plastic	LCP (Liquid Crystal Polymer)

RoHS and Halogen-Free Compliance

RoHS Compliant

Halogen Free per IEC 61249-2-21

Storage Conditions

Device must be stored in the original, unopened bag.

Suggested storage temperature (except for packaging material)

Temperature: -10°C – 40°C

Humidity: 75%RH (max)

The following environments should be avoided for storage:

Areas with salt air or with corrosive gas, such as Cl_2, H_2S, NH_3, SO_2 and NO_x.

Areas exposed to direct sunlight.

Areas outside of the suggested storage temperature range, as indicated above.

Precautions for Handling

The device is composed of plastic parts, please do not clamp or dent the housing with a tool as this might cause a resistance increase and product damage.

When welding product terminals or mounting the breaker on a battery (cell), please be careful not to apply excessive bending, twisting or force on the product and terminals. The excessive stress might cause a resistance increase or product damage.

Please refer to following cautions:

1. Do not apply more than 10N bend force to product. (Fig. M3)
2. Do not apply more than 1.5cN/m twist torque to the product. (Fig. M4)
3. Do not apply more than 20N deflection force to product. (Fig. M5)
4. Do not apply more than 2N force to the terminals. (Fig. M6)
5. Do not apply more than 0.6cN/m twisting torque to the terminals. (Fig. M7)
6. Do not bend the terminal base more than 45° when the product is mounted in a fixed position. (Fig. M8)

Figure M3

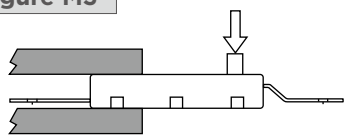

Figure M4

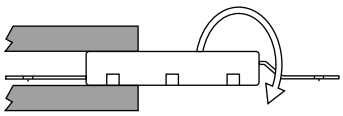

Figure M5

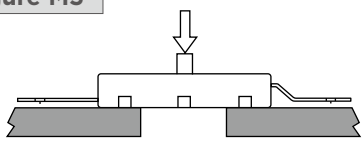

Figure M6

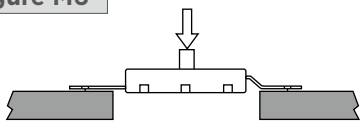

Figure M7

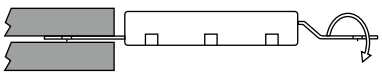

Figure M8

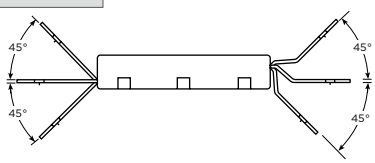

Product terminals can be welded using direct welding and series welding methods. In either case, please use a suitable jig so that the device will not be subjected to the stress conditions listed above.

Pull strength and detach strength of the terminal welds are per user requirements. However, if the welding is controlled by resistance, the measurement should be made as close as possible to the weld point by a "4-point clip method" using milliohm meter to ensure accuracy.

Avoid putting stress on the device, as listed above, when a jig, fitting or additional welding process is used. Please reconfirm the resistance value whenever a new process is added.

Notice:

Information furnished is believed to be accurate and reliable. However, users should independently evaluate the suitability of and test each product selected for their own applications. Tyco Electronics Corporation and its affiliates in the TE Connectivity Ltd. group of companies ("TE") reserve the right to change or update, without notice, any information contained in this publication; to change, without notice, the design, construction, processing, or specification of any product; and to discontinue or limit production or distribution of any product. This publication supersedes and replaces all information previously supplied. Without express written consent by an officer of TE, TE does not authorize the use of any of its products as components in nuclear facility applications, aerospace, or in critical life support devices or systems. TE expressly disclaims all implied warranties regarding the information contained herein, including, but not limited to, any implied warranties of merchantability or fitness for a particular purpose. TE's only obligations are those in the TE Standard Terms and Conditions of Sale and in no case will TE be liable for any incidental, indirect, or consequential damages arising from the sale, resale, use, or misuse of its products.

Special Recommendations:

1. The power supply voltage must be less than the rated voltage of the device. Operation above the voltage rating may result in device damage, smoking or flame.
2. Designs must be selected in such a manner that the device hold current is higher than the normal current value in the circuit and that the device trip current is lower than the abnormal current value. Selecting device hold current and trip current values that are too low for the application may interrupt the circuit under normal usage conditions.
3. This product should not be used in an application where the maximum interrupt current can be exceeded in a short circuit condition.
4. The devices are intended for protection against damage caused by occasional overcurrent or overtemperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated.
5. The devices may not perform as specified if mechanical pressure is added while the device is in the tripped state or exposed to temperature conditions lower than -30˚C or over 100˚C.

HIGH-CURRENT RTP DEVICES
Reflowable Thermal Protection

For High-Power Automotive Electronics Design

The Reflowable Thermal Protection (RTP) device is a low-resistance, robust surface mountable thermal protector. The High-Current RTP (HCRTP) is specifically geared to automotive applications where it can help designers comply with AECQ standards. The HCRTP has a set open temperature and can be installed using reliable, lead (Pb)-free, Surface Mount Device (SMD) assembly and reflow process. The device's high-current capability of 90A at 23°C helps provide protection against thermal runaway when power FETs and other components fail in applications such as ABS modules, glow plugs and engine cooling fans.

The HCRTP device can withstand demanding environmental, life and reliability requirements – such as shock, vibration, temperature cycling and humidity exposure – of high-power, high-current automotive applications. In the field, the HCRTP device opens if its internal junction exceeds the device's specified open temperature of 210°C. Temperature increases can have multiple sources, one of which is component failure of power FETs, capacitors, resistors, triacs, etc. The HCRTP device's open temperature is selected so that the device does not open within normal component operating windows, but does open in the case of a thermal runaway event, and before the melt temperature of typical lead-free solders.

To simplify installation, improve reliability and optimize thermal coupling with the PCB, the HCRTP device is surface mountable, which means no special SMD installation is required. After installation, the HCRTP device utilizes a one-time electronic arming process to become thermally sensitive. Before the arming procedure, the device can go through installation temperatures of up to 260°C without opening. After arming, the device will open when the critical junction exceeds the open temperature. Arming typically occurs at end of line testing after reflow.

BENEFITS

- Helps prevent failed components from causing damage in case of a thermal event
- Allows the use of standard surface-mount production methods so that no special assembly costs are required
- Low power dissipation and voltage drop
- Supports DC electronic circuits
- Suitable for high-power, high-current automotive applications
- Enables green design

FEATURES

- Opens at temperature (210°C) below the critical thermal threshold
- Prior to activation, withstands Pb-free solder reflow process with peak temperatures up to 260°C without opening

APPLICATIONS

- Helps provide protection against thermal runaway for power FETs and other components if failure occurs in applications such as automotive ABS modules, glow plugs and engine cooling fans, etc.
- Other DC thermal protection

Figure HP1 — Typical Application Block Diagram

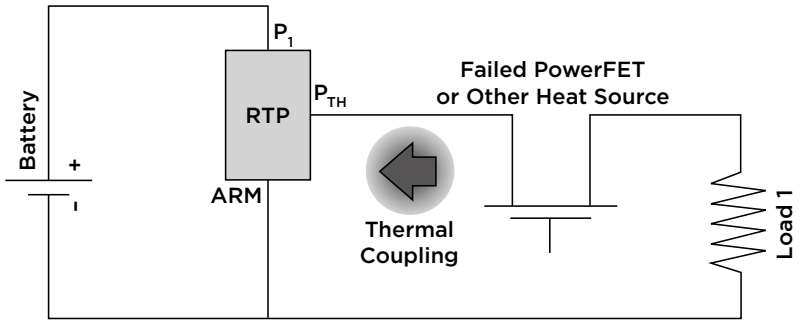

Figure HP2 — Pin Configuration & Description Pad Layout Recommendations

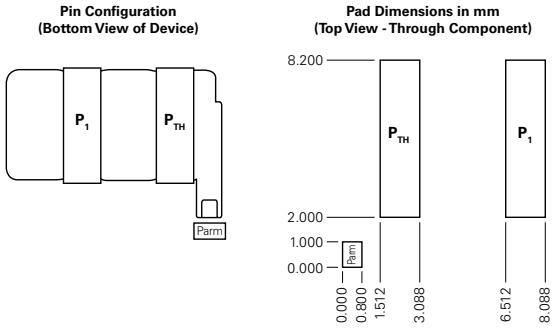
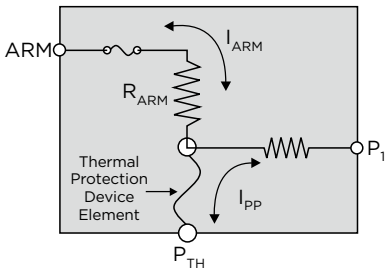
Pin Number	Pin Name	Pin Function
1	P_1	Power I/O pin (Main power current path)
2	P_{TH}	Thermally sensitive power I/O pin - Intended to share protected component heat sink
3	ARM	Electronic arming pin



Definition of Terms / Device Block Diagram

Term	Definition
Junction	The internal interface which must achieve the "Open Temperature" for the RTP device to open thermally after arming. This interface (thermal element) is located directly above the P_{TH} pad.
Open Temp	The device will open when the junction temperature achieves this value.
I_{ARM} and R_{ARM}	Current and resistance levels measured between the ARM pin and either the P_1 or P_{TH} pin. (These values are only relevant during pre-arming.)
R_{pp} and I_{pp}	Current and resistance levels measured between the P_1 and P_{TH} pins.



Method of Operation - Electronic Arming

The RTP device is a unique thermal protector. It can be reflowed at temperatures up to 260°C without opening, yet in operation it will open at temperatures well below 260°C. To achieve this functionality, the RTP device uses an electronic arming mechanism.

Electronic arming must be done after reflow, and can be done during final test.

The device is armed by sending a specified arming current through the ARM pin of the device. Arming is a time- and current-dependent event. Arming times vs. current are provided in the "Arming Characteristics" section of this overview. Current can flow in either direction through the ARM pin.

Prior to arming, R_{ARM} should have typical resistance as specified in the "Arming Characteristics" section. Once armed, the ARM pin will be electrically open relative to the P_1 or P_{TH} pins.

Arming has been successful once R_{ARM} exceeds the post-arming minimum resistance specified in the "Arming Characteristics" section. RTP devices must be armed individually and cannot be armed simultaneously in series.

Once "armed," the RTP device will permanently open when the device junction achieves its specified opening temperature.

Although multiple options exist, below is one simple arming option.

Sample Arming Options

ARM pin connected between two test points

In this case, pin P_1 is left "floating," and arming can occur during test, at a user defined time, by connecting to the Test Points and applying sufficient current (I_{ARM}) between Test Point 1 and Test Point 2 until the device is armed.

Current Flow

P_{TH} ⟷ ARM = Arming

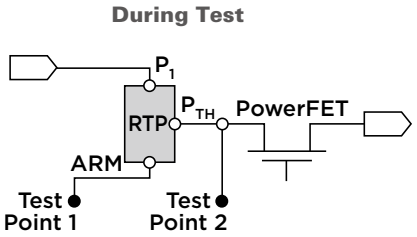


Table HP1 — Absolute Max Ratings

Absolute Max Ratings		Max	Units
Max DC Open Voltage [1]	—	16	V_{DC}
Max DC Interrupt Current [1]	@ 16 V_{DC}	500	A

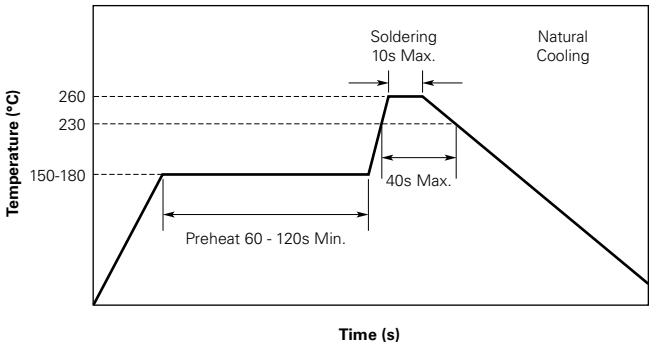
Peak/Classification Temperature (Tp)	260°C
Time within 5°C of Actual Peak Temperature	
Time (tp)	20-40 Seconds
Ramp-Down Rate	6°C/ Second Max
Time 25°C to Peak Temperature	8 Minutes Max

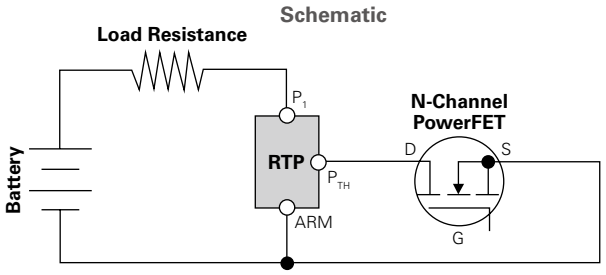


Alternate & Multi-FET Schematic Implementations

Low Side, N-Channel Single FET Protection

Solution Considerations

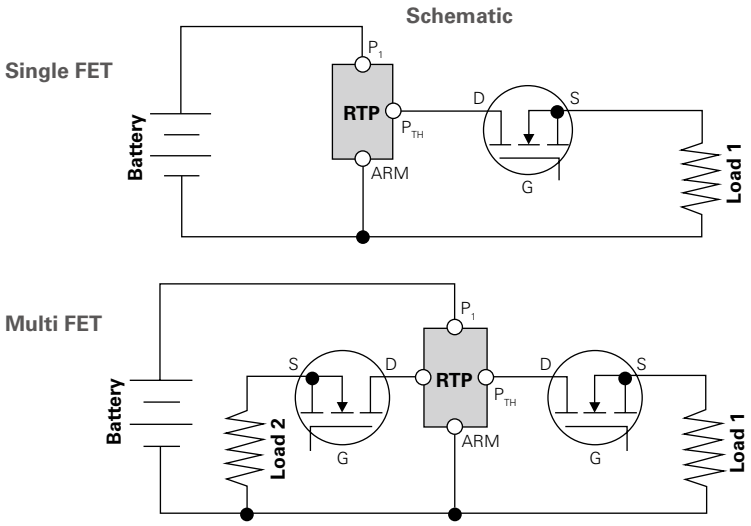
- Low side N-Channel FET architectures allow only one FET to be installed per RTP device.
- Note: Load may limit "arming" current.



High Side, N-Channel FET Protection

Solution Considerations

- High Side FET designs allow multiple FETs to be installed with 1 RTP device while all sharing the same copper mounting pad (heat sink).
- In a multi-FET configuration, care must be taken to assure that the proper thermal response can be achieved with each FET.



Note: The degree of thermal connectivity between the heat source and the RTP device is highly dependent on board layouts, PCB material, heat sink structures, and relative placement and design of co-located components. It is the responsibility of the user to verify that the RTP device provides sufficient protection in the user's specific final device implementation

Environmental Specifications

Active humidity aging	85°C, 85% RH, 1000 hours
Storage humidity	Per IPC/JEDEC J-STD020A level 1 (MSL1)
Thermal shock	150°C, -55°C (500 times)

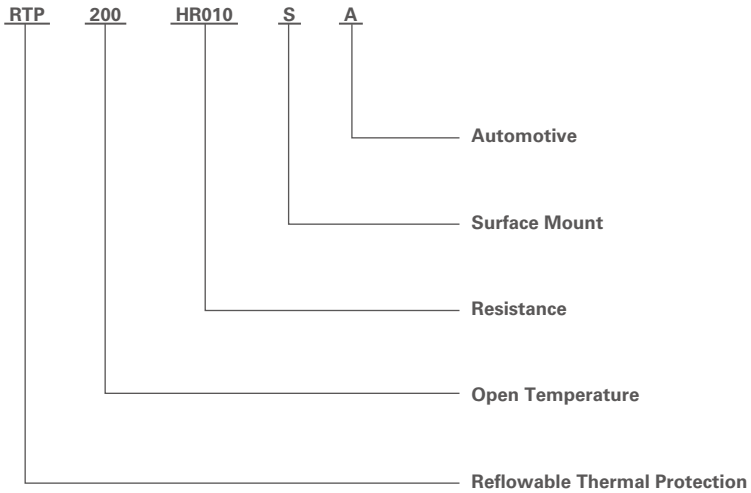
Qualification Testing

The Qualification Testing plan for this series of RTP devices is built upon AEC automotive grade testing for ICs (AEC-Q100), discrete semiconductors (AEC-Q101) and passive components (AEC-Q200), with the intent to demonstrate survivability to the most stringent of the relevant requirements.*

Contact TE Circuit Protection for updated qualification status and detailed procedures.

*A specific list of tests and conditions is available upon request.

Part Numbering System



PESD PROTECTION DEVICES

TE's Polymer ESD (PESD) line of devices helps protect I/O ports on HDMI 1.3, portable video players, LCD and plasma TVs, USB 2.0, digital visual interface (DVI) and antenna switches. PESD devices shunt electrostatic discharge away from sensitive circuitry in HDTV equipment, printers, laptops, cellular phones and other portable devices.

PESD devices offer many advantages over traditional protection devices, such as multi layer varistors (MLVs), which may degrade or distort the signal in high data rate circuits. Compared to miniature gas discharge tubes (GDTs), PESD devices provide a more compact form factor and an economical solution for the shrinking profiles of today's compact information appliances.

Available in a range of form factors, our PESD protection devices provide low capacitance and meet transmission line pulse (TLP) testing, as well as IEC61000-4-2 testing.

BENEFITS

- ESD protection for high frequency application (HDMI 1.3)
- Smaller form factor for board space savings
- Helps protect sensitive electronic circuits against damage caused by electrostatic discharge (ESD) events
- Assists equipment to pass IEC 61000-4-2, level 4 testing

FEATURES

- RoHS compliant
- Lead free
- Halogen free (refers to: Br≤900ppm, Cl≤900ppm, Br+Cl≤1500ppm)
- 0.25 pF (typ) capacitance
- Low-leakage current
- Low-clamping voltage
- Fast response time (< 1ns)
- Capable of withstanding numerous ESD strikes
- Compatible with standard reflow installation procedures
- Thick film technology
- Bi-directional protection

APPLICATIONS

- HDMI 1.3 interfaces
- LCD & plasma TVs
- Cellular phones
- Antennas
- Portable video players
- Portable devices (PDA, DSC, Bluetooth)
- Printer ports
- Satellite radios
- USB 2.0 and IEEE 1394 interfaces
- DVI
- GPS systems

Parameter Definitions

Operation Voltage (V_{DC})
Defined as DC voltage, under which device is in OFF state and leakage current below certain threshold.

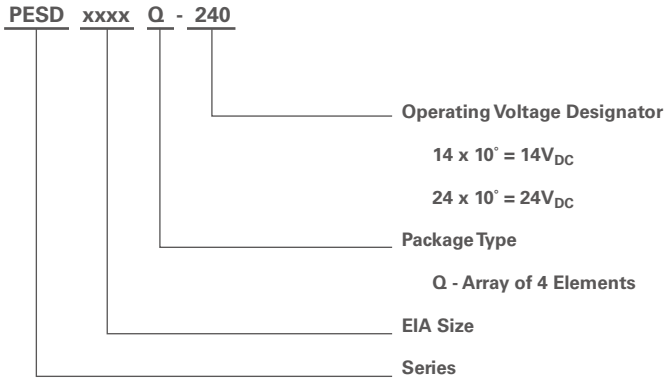
Leakage Current (I_L)
Current through device under Operation Voltage V_{DC}.

Trigger Voltage (V_T)
Voltage at which the device switches from the OFF to the ON state, during the IEC waveform or the TLP system.

Clamping Voltage (V_C)
Voltage cross device under 8kV per IEC or measured by TLP system. Typically measured 30ns after initiation of the ESD pulse (for TLP, both 30ns and 60ns are sometimes used).

Capacitance (C_P)
Capacitance of the device measured at 1MHz with 0V and max operating voltage bias.

Part Numbering System

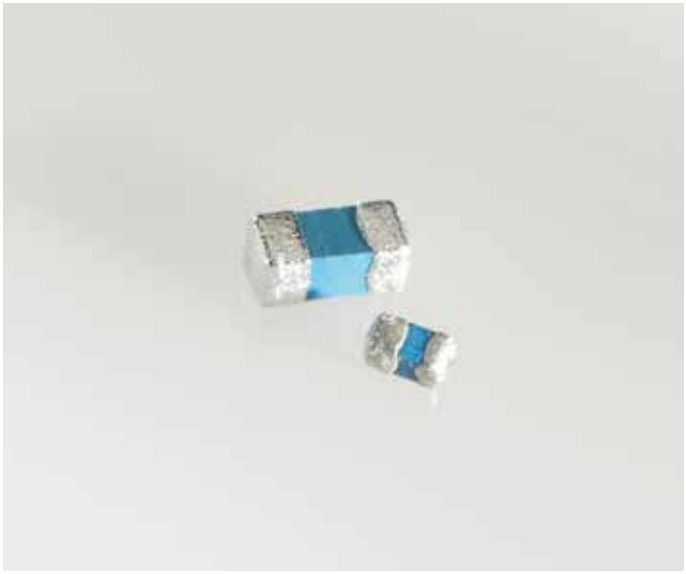


⚠ Warning :

Application Limitations for PESD0402-140, PESD0402-240, PESD0603-240 and PESD1206Q-240: These parts are not intended to be used on power lines or for power bus applications. Users should independently evaluate the suitability of and test each product selected for their own application.

Notice:

CHIPSESD DEVICES



TE Circuit Protection's ChipSESD family of Silicon ESD devices, available in EIA-0201 and EIA-0402 sized rectangular SMT passive component packages, can help protect electronic circuits against damage from electrostatic discharge (ESD) events.

The SESD0201P1BN-0400-090, 0201-sized ChipSESD device's miniature footprint (0.6mm x 0.3mm x 0.3mm) is approximately 70% smaller than prior-generation devices. This offers designers flexibility in space constrained applications.

The ChipSESD devices are high-capacitance, bi-directional devices that can be used for low-speed generic interfaces such as keypads, power buttons, speakers and microphone ports in a portable electronics. The bi-directional operation eliminates orientation constraints and the need for polarity inspections. The surface mount technology (SMT) passive component package allows the devices to be easily installed onto the printed circuit board using the standard PCB assembly process. Once soldered onto the boards, the ChipSESD's solder fillets at the end terminals can easily be visually inspected.

The ChipSESD devices offer 10kV contact and 16kV air discharge protection per the IEC61000-4-2, level 4 standard with a surge rating of 2A under 8x20μs pulse.

BENEFITS

- Silicon ESD devices in an EIA-0201 and EIA-0402 sized rectangular SMT passive component package
- Bi-directional operation eliminates orientation constraints
- Standard PCB assembly and rework process
- ESD protection in space-constrained portable electronics and mobile handsets
- Helps protect electronic circuits against damage from ESD
- Assists equipment to pass IEC61000-4-2, level 4 testing

APPLICATIONS

- Mobile phones and portable electronics
- Digital cameras and camcorders
- Notebooks, set top boxes, motherboards
- USB 2.0 and computer I/O ports
- Applications requiring high ESD performance in a small package

FEATURES

- Input capacitance -4.0pF (typ) & 4.5pF (typ)
- Low leakage current – 1.0μA (max)
- Low working reverse voltage - 6.0V (max)
- Capable of withstanding numerous ESD strikes
- RoHS compliant
- Halogen free
  (refers to: Br≤900ppm, Cl≤900ppm, Br+Cl≤1500ppm)

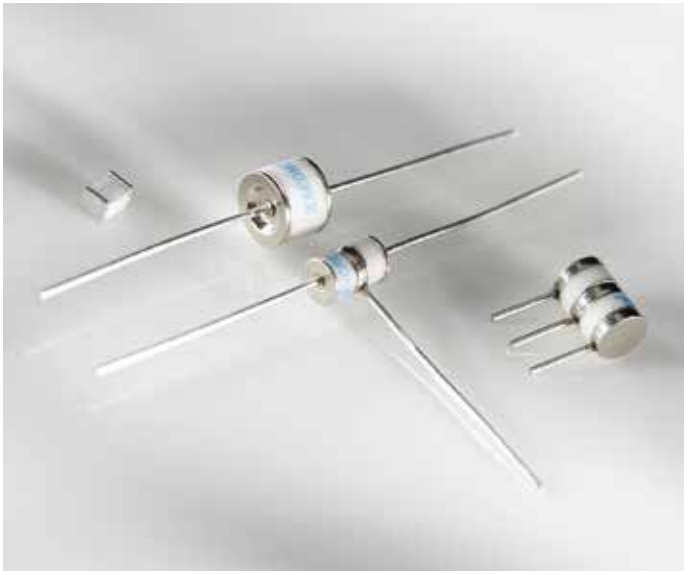
GAS DISCHARGE TUBES (GDTS)



TE Circuit Protection's GDTs (Gas Discharge Tubes) are placed in front of, and in parallel with, sensitive telecom equipment such as power lines, communication lines, signal lines and data transmission lines to help protect them from damage caused by transient surge voltages that may result from lightning strikes and equipment switching operations. These devices do not influence the signal in normal operation. However, in the event of an overvoltage surge, such as a lightning strike, the GDT switches to a low impedance state and diverts the energy away from the sensitive equipment.

Our GDTs offer a high level of surge protection, a broad voltage range, low capacitance, and many form factors including new surface mount devices, which makes them suitable for applications such as Main Distribution Frame (MDF) modules, high data-rate telecom applications (e.g. ADSL, VDSL), and surge protection on power lines. Their low capacitance also results in less signal distortion. When used in a coordinated circuit protection solution with PolySwitch devices, they can help equipment manufacturers meet stringent safety regulatory standards.

BENEFITS

- Helps provide overvoltage fault protection against damage caused by high energy surges
- Suitable for use in sensitive equipment due to impulse sparkover response
- Suitable for high-frequency applications
- Highly reliable performance
- New surface-mount devices for automated manufacturing

APPLICATIONS

- Telecommunications
  - MDF modules, xDSL equipment, RF systems, antenna, base stations
- Industrial and Consumer Electronics
  - Power supplies, surge protectors, alarm systems, irrigation systems

FEATURES

- RoHS compliant
- Halogen free
  (refers to: Br≤900ppm, Cl≤900ppm, Br+Cl≤1500ppm)
- Wide range of voltages (75V-4000V)
- Wide range of form factors
  (3mm, 5mm, 6mm, 7mm, 8mm diameter devices)
- Low capacitance and insertion loss
- Crowbar device with low arc voltage
- High accuracy spark-over voltages for high precision designs
- Devices tested per ITU K.12 recommendations
- Various lead configurations and surface-mount options
- Optional fail-short mechanism
- Non radioactive materials
- Devices certified to UL497B and UL1449

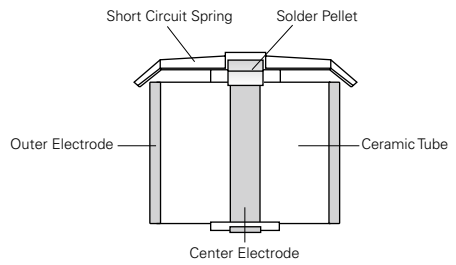
Fail-Short Mechanism for Gas Discharge Tubes

Fail-Short Mechanism — FS

The FS fail-short mechanism is a short circuit spring mounted onto a solder pellet located at the center electrode of the gas tube. Under normal operating conditions, the pellet is positioned to make the spring float above the outer electrodes, as shown in Figure G11 on the previous page..

When a prolonged discharge event causes the gas tube temperature to reach the melting point of the solder, the pellet softens allowing the short circuit spring to contact with both outer electrodes (Figure G12). This process results in a permanent short circuit between all three electrodes creating a low resistance path that conducts the fault current to ground without generating a significant amount of heat.

Figure G12



Fail-Short Mechanism — FT

The FT fail-short mechanism is a short circuit spring with a piece of plastic foil spot welded onto the center electrode. Under normal operating conditions, the plastic foil makes the spring insulated from the two outer electrodes.

When a prolonged discharge event causes the gas tube temperature to reach the melting point of the plastic foil, the plastic foil melts allowing the short circuit spring to contact both outer electrodes (Figure G13). This process results in a permanent short circuit between all three electrodes creating a low resistance path that conducts the fault current to ground without generating a significant amount of heat.

Figure G13

Installation for Gas Discharge Tubes

Care should be taken when installing GDTs equipped with fail-short mechanisms into arrester magazines, printed circuit boards, etc. Too much downward pressure may force the short circuit spring through the thin insulation tube creating a shorted condition.

Solder Reflow Recommendations for Surface-mount GDT Devices

Surface-mount GDTs can be soldered using standard Pb-free reflow profiles.

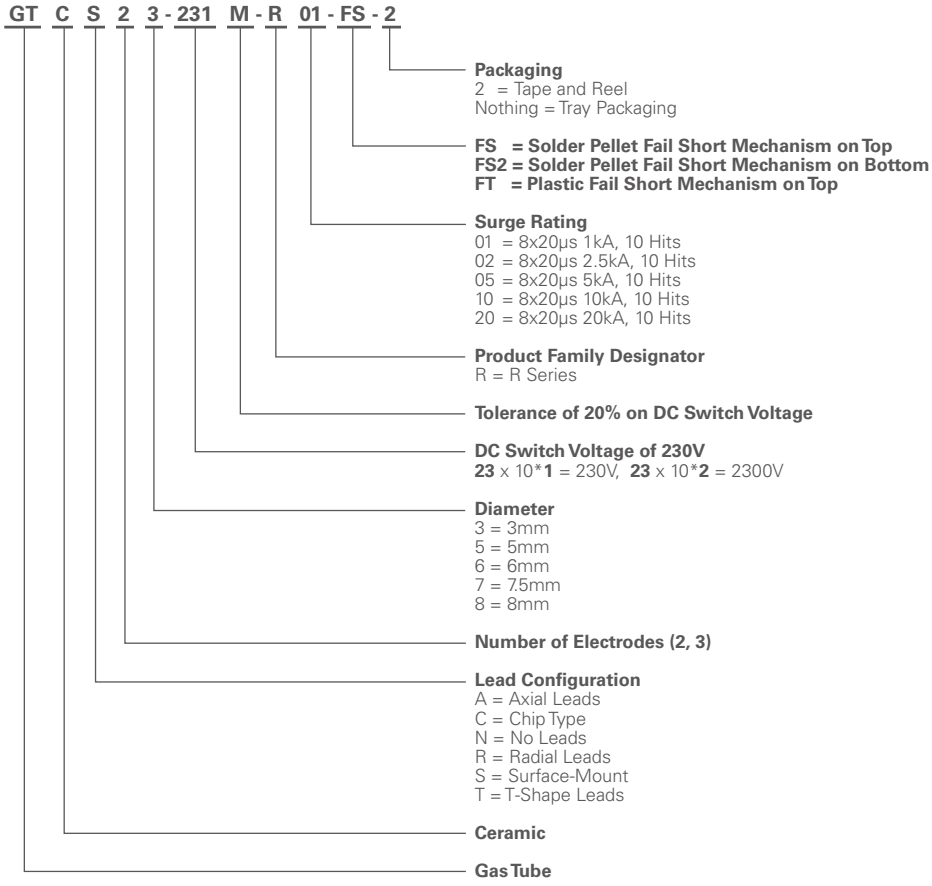
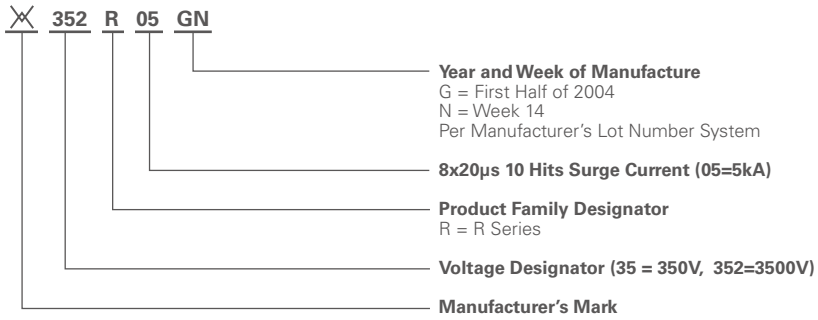
Part Numbering System for Gas Discharge Tubes

Example Part Number



NOTE: GTCS23-XXXM-R01 and GTCC23-XXXM-R01 parts available only in surface-mount and tape and reel packaging.

Marking Reference Guide — Example



NOTES: GTCS23-XXXM-R01 and GTCC23-XXXM-R01 parts will have no marking. Devices with no leads (GTCNxx-xxxx-xx) are not able to be soldered as their electrodes are nickel plated. They should be installed by insertion into a magazine clip.

SURFACE-MOUNT FUSES
Fundamentals

Overview

TE Circuit Protection offers the widest selection of surface-mount fuses available for addressing a broad range of overcurrent protection applications. Helping to prevent costly damage and promote a safe environment for electronic and electrical equipment, our single-use chip fuses provide performance stability to support applications with current ratings from .5A up to 30A.

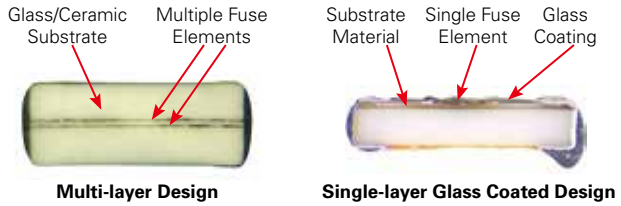
Multi-layer Design for Chip Fuses

The multi-layer design has the benefit of exposing more fuse element surface area to the glass-ceramic absorption material. When the fuse elements open, there is more material for the vaporizing fuse metals to absorb into, resulting in a very efficient and effective quenching of the fuse arc.

Figure SF1 compares the multi-layer design of our SFF fuses with standard glass coated designs. The glass coated designs rely on the coating on only one side of the fuse element to absorb the vaporizing fuse material when it opens. Therefore, there is much less absorption material available to absorb the fuse metals. The result can be prolonged arcing and possible coating breach.

Figure SF2 shows how the absorption characteristics of the two designs differ. The multi-layer design indicates a clean separation with the fuse element evenly diffusing into the surrounding ceramic substrate. In the glass coated design, the element diffusion takes place in a small portion of the device and is only absorbed by the glass material directly above the area of failure.

Figure SF1



Multi-layer Design **Single-layer Glass Coated Design**

Figure SF2

Multi-layer Design **Single-layer Glass Coated Design**

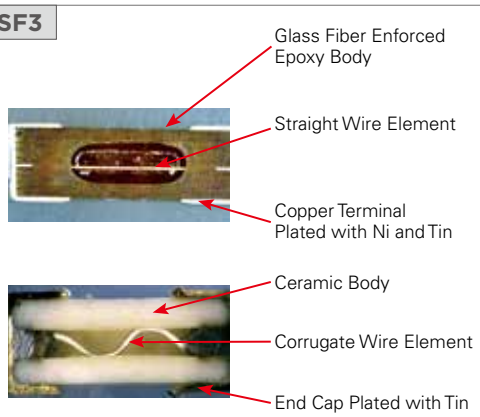
Wire-In-Air Design for 2410SFV, 1206SFV Fuses

The 2410SFV, 1206SFV fuse are Wire-In-Air SMD fuse that is suitable for secondary level overcurrent protection applications.

Figure SF3 compares our straight wire element design 2410SFV, 1206SFV fuses with normal corrugated wire design fuse. The straight wire element in air provides consistent fusing and cutting characteristics together with inrush current withstanding capability.

By introducing PCB assembly technology into the 2410SFV, 1206SFV fuse design and manufacturing process, lead-free compliance has been achieved without the problems associated with end caps on traditional ceramic devices.

Figure SF3



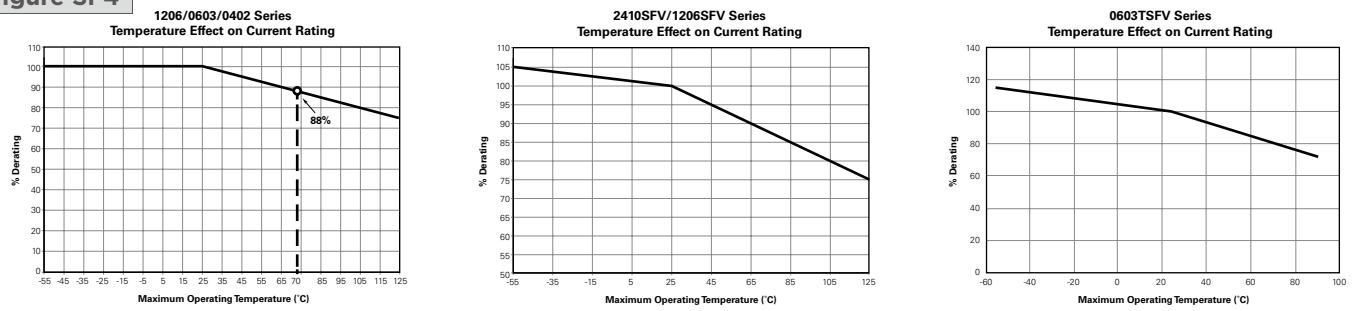
Thin Film Design for 0603TSFV Fuses

The 0603TSFV fuses are thin film fuses that are suitable for secondary level overcurrent protection applications. The thin film design has the benefit of fast fusing under low overload current and thin thickness.

Temperature Derating

A fuse is a temperature sensitive device. Therefore, operating temperature will have an effect on fuse performance and lifetime. Operating temperature should be taken into consideration when selecting the fuse current rating. The Thermal Derating Curve for surface-mount fuses is presented in Figure SF4. Use it to determine the derating percentage based on operating temperature and apply it to the derated system current.

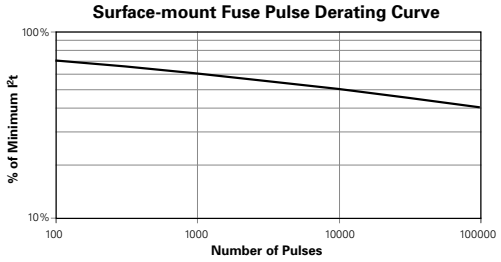
Figure SF4



Pulse Cycle Derating

Once the I^2t value for the application waveform has been determined, it must be derated based on the number of cycles expected over the system lifetime. Since the stress induced by the current pulse is mechanical in nature, the number of times the stress is applied has significant bearing on how much derating must be applied to the fuse rating. Figure SF5 presents the current pulse derating curve for our surface-mount chip fuses up to 100,000 cycles.

Figure SF5



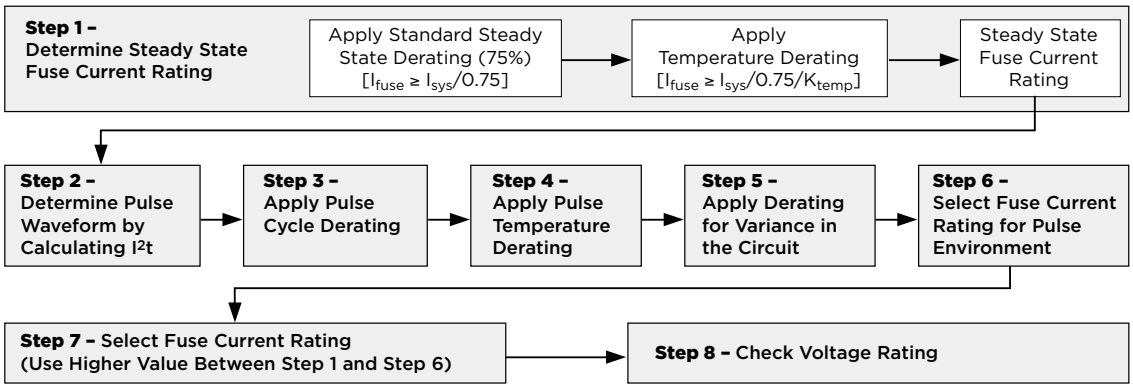
Selecting Surface-mount Fuses

Fuse selection seems straightforward, in that you pick one which has a current rating just a bit higher than your worst case system operating current. Unfortunately, it is not that simple. There are derating considerations for operating current and application temperature. Turn-on and other system operations (like processor speed changes or motor start up) cause current surges or spikes that also require consideration when selecting a fuse. So selecting the right fuse for your application is not as simple as knowing the nominal current drawn by the system.

Fuse Selection Flowchart

However, the basic considerations for fuse selection are shown in the flow chart presented in Figure SF6. Following this flow chart will help you select a fuse best suited for your application conditions. For a detailed example of this process you can download our Fuse Selection Guide available on our website.

Figure SF6

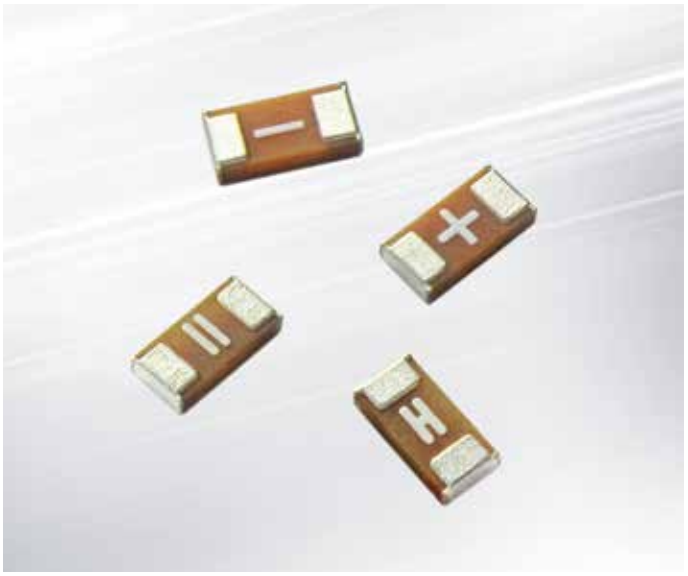


SURFACE-MOUNT FUSES

0603 Thin Film Very Fast-Acting Chip Fuses

Very fast-acting fuses help provide overcurrent protection for systems using DC power sources up to 65V_{DC}. The fuses' thin film design helps provide fast fusing under low overload current and low DCR (Direct Current Resistance).

These RoHS-compliant, surface-mount devices offer strong arc suppression characteristics and facilitate the development of more reliable, high-performance consumer electronics, such as notebook computers and tablets, digital cameras, memory cards, toys, Bluetooth earphones and other portable electronics devices.



BENEFITS

- Very fast acting at 200% and 300% overloads
- Inrush current withstand capability at high overloads
- Thin body for space-limited applications
- Fiberglass enforced epoxy fuse body
- Copper termination with nickel and tin plating
- RoHS compliant and lead-free materials

FEATURES

- Lead-free materials and RoHS compliant
- Halogen free
  (refers to: Br≤900ppm, Cl≤900ppm, Br+Cl≤1500ppm)
- Fiberglass enforces epoxy fuse body design
- Low DCR
- -55°C to +90°C operating temperature range

APPLICATIONS

- Notebook computers and tablets
- Digital cameras
- Memory cards
- Toys
- Bluetooth earphones
- Portable electronics devices

SURFACE-MOUNT FUSES
Fast-Acting Chip Fuses

Fast-acting chip fuses help provide overcurrent protection for systems using DC power sources up to $63V_{DC}$. The fuse's monolithic, multilayer design helps provide the highest hold current in the smallest footprint, reduce diffusion-related aging, improve product reliability and resilience, and enhance high-temperature performance in a wide range of circuit designs.

These RoHS-compliant surface-mount devices offer strong arc suppression characteristics and help facilitate the development of more reliable, high-performance consumer electronics such as laptops, multimedia devices, cell phones and other portable electronics.

BENEFITS

- Small size with high current ratings
- Temperature stability
- High reliability and resilience
- Strong arc suppression characteristics

FEATURES

- Lead-free and RoHS compliant
- Halogen free
  (refers to: Br≤900ppm, Cl≤900ppm, Br+Cl≤1500ppm)
- Monolithic, multilayer design
- High-temperature performance
- -55°C to +125°C operating temperature range

APPLICATIONS

- Laptops
- Digital cameras
- Cell phones
- Printers
- DVD players
- Portable electronics
- Game systems
- LCD monitors
- Scanners

SURFACE-MOUNT FUSES
0603 Very Fast-Acting Chip Fuses

Very fast-acting chip fuses help provide overcurrent protection for systems using DC power sources up to $32V_{DC}$. The fuse's monolithic, multilayer design helps provide the highest hold current in the smallest footprint, reduce diffusion-related aging, improve product reliability and resilience, and enhance high-temperature performance in a wide range of circuit designs.

These RoHS-compliant surface-mount devices offer strong arc suppression characteristics and facilitate the development of more reliable, high-performance consumer electronics such as laptops, multimedia devices, cell phones and other portable electronics.

BENEFITS

- Very fast acting at 200% and 300% overloads
- Inrush current withstand capability at high overloads
- Thin body for space-limited applications
- Glass ceramic monolithic structure
- Silver fusing element and silver termination with nickel and tin plating
- RoHS compliant and lead-free materials
- Symmetrical design with marking on both sides (optional)

FEATURES

- Lead-free materials and RoHS compliant
- Halogen free
  (refers to: Br≤900ppm, Cl≤900ppm, Br+Cl≤1500ppm)
- Monolithic, multilayer design
- High-temperature performance
- -55°C to +125°C operating temperature range

APPLICATIONS

- Laptops
- Digital cameras
- Cell phones
- Printers
- DVD players
- Portable electronics
- Game systems
- LCD monitors
- Scanners

SURFACE-MOUNT FUSES

1206 Very Fast-Acting Chip Fuses

Very fast-acting chip fuses help provide overcurrent protection for systems using DC power sources up to $65V_{DC}$. The fuses' wire-in-air design helps provide the highest voltage rating and excellent inrush current withstand capability, reduces diffusion-related aging, improves product reliability and resilience, and enhances high-temperature performance in a wide range of circuit designs.

These RoHS-compliant, surface-mount devices offer strong arc suppression characteristics and facilitate the development of more reliable, high-performance consumer electronics. These include laptop computers and ultra-portable notebooks, backlight drivers, DC/DC converters, low-voltage power for lighting applications and automotive electronics.

BENEFITS

- Fast acting at 250% overloads
- Inrush current withstand capability at high overloads
- Thin body for space-limited applications
- Fiberglass-enforced epoxy fuse body for reliability
- Symmetrical design with markings on both sides (optional)
- Wire-in-air design increases safety
- Meet environmental standards for greener designs

FEATURES

- Lead-free materials and RoHS compliant
- Halogen free
  (refers to: Br≤900ppm, Cl≤900ppm, Br+Cl≤1500ppm)
- -55°C to +125°C operating temperature range
- Fast acting at 250% overload current level
- Copper/copper alloy fusing element

APPLICATIONS

- Laptop computers and ultra-portable notebooks
- Backlight Drivers
- DC/DC Converters
- Low-voltage Power for Lighting Applications
- Automotive Electronics

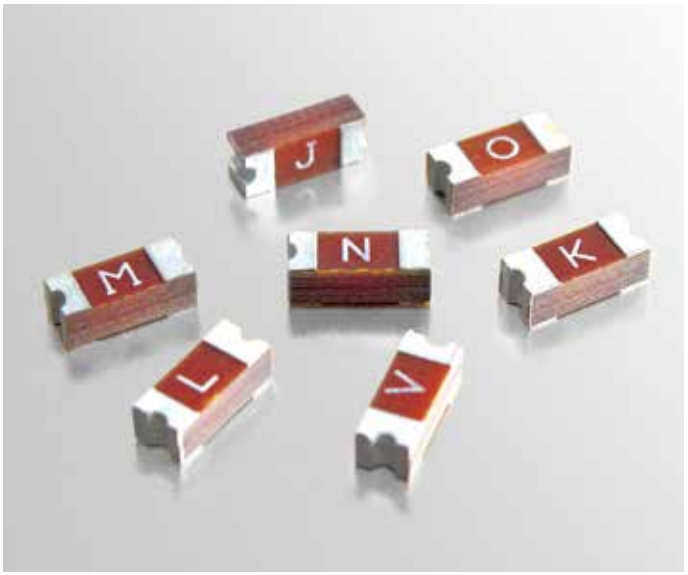
SURFACE-MOUNT FUSES
2410 Very Fast-Acting Chip Fuses

The 2410 (6125mm) Wire-in-Air (WIA) SMD Fuse is suitable for secondary-level overcurrent protection applications.

These lead-free surface-mount devices offer increased reliability and avoid the risk of end caps falling off. Their straight wire element in air performs consistent fusing and cutting characteristics.



BENEFITS

- Very fast acting at 200% overload current level
- Excellent inrush current withstand capability
- High reliability and resilience
- Strong arc suppression characteristics
- Copper terminal with nickel and tin plating

FEATURES

- Halogen free, RoHS compliant and 100% lead free
- Copper or copper alloy composite fuse link
- Fiberglass enforced epoxy fuse body
- Wide range of current rating
- -55°C to +125°C operating temperature range (With de-rating)

APPLICATIONS

- Industrial equipment
- LCD/PDP TV
- Backlight inverter
- Power supplier
- Telecom system
- Networking
- Game systems
- White goods
- Automotive

SURFACE-MOUNT FUSES
Pulse Tolerant Chip Fuses

Pulse Tolerant Chip Fuses have high inrush current withstand capability and provide overcurrent protection for DC power systems. These devices combine a silver fusing element and monolithic, multilayer design to provide strong arc suppression characteristics.

These RoHS-compliant surface-mount devices can help facilitate the development of more reliable, high-performance consumer electronics such as laptops, multimedia devices, cell phones and other portable electronics.

BENEFITS

- High inrush current withstanding capability
- Ceramic monolithic structure
- Silver fusing element and silver termination with nickel and tin plating
- Temperature stability
- Strong arc suppression characteristics

FEATURES

- Lead free materials and RoHS compliant
- Halogen free
  (refers to: Br≤900ppm, Cl≤900ppm, Br+Cl≤1500ppm)
- Monolithic, multilayer design
- High-temperature performance
- -55°C to +125°C operating temperature range

APPLICATIONS

- Laptops
- Digital cameras
- Cell phones
- Printers
- DVD players
- Portable electronics
- Game systems
- LCD monitors
- Scanners

SURFACE-MOUNT FUSES
High-Current-Rated Chip Fuses

The monolithic multilayer design of the TE Circuit Protection high-current-rated chip fuses helps to provide some of the highest current ratings available in the 1206 size and enhances high-temperature performance in a wide range of circuit protection designs. The devices' small size, high reliability and strong arc suppression characteristics make them suitable for overcurrent protection of power supplies, servers, communications equipment, voltage regulator modules, and other high current, small size applications.

BENEFITS

- Glass ceramic monolithic structure provides stability in application cycling
- High-current rating in a small package allows more efficient use in system space
- Strong arc suppression in overcurrent conditions

FEATURES

- Lead-free materials and RoHS compliant
- Halogen free
  (refers to: Br≤900ppm, Cl≤900ppm, Br+Cl≤1500ppm)
- Monolithic multilayer design
- High-temperature performance
- -55°C to +150°C operating temperature range

APPLICATIONS

- Communications equipment
- Voltage regulator modules
- Power supplies
- Servers

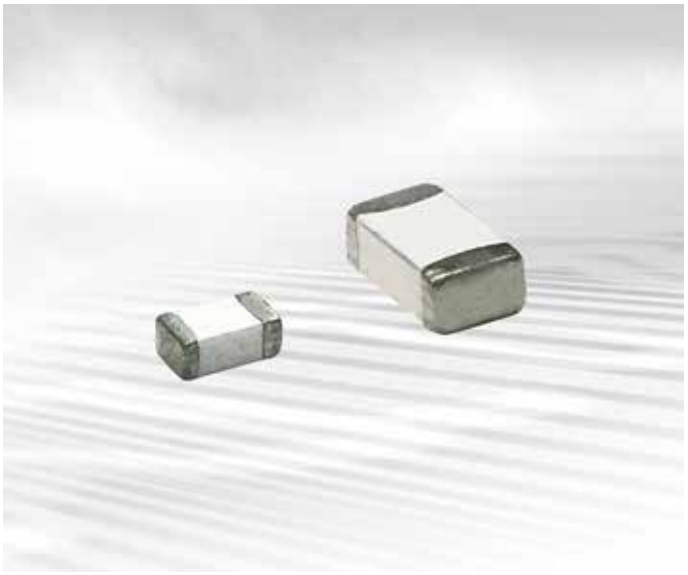
SURFACE-MOUNT FUSES
Slow-Blow Chip Fuses

Available in industry standard 1206 and 0603 chip sizes, TE Circuit Protection's slow-blow chip fuses help provide overcurrent protection on systems that experience large and frequent current surges as part of their normal operation.

The slow-blow chip fuse's monolithic, multilayer design helps provide some of the highest current ratings available in the 1206 and 0603 footprints and enhances high-temperature performance in a wide range of circuit protection designs. The devices' small size, high reliability and strong arc suppression characteristics make them suitable for overcurrent protection of power supplies, capacitor filter banks, Liquid Crystal Display (LCD) backlight inverters, electric motors and portable electronics.



BENEFITS

- Time-delayed design prevents nuisance openings in pulsed and high inrush current applications
- Small size with high-current ratings
- Strong arc suppression characteristics

FEATURES

- Lead-free materials and RoHS compliant
- Halogen free
  (refers to: Br≤900ppm, Cl≤900ppm, Br+Cl≤1500ppm)
- Monolithic multilayer design
- High-temperature performance
- -55°C to +125°C operating temperature range

APPLICATIONS

- Small motors systems
- Portable electronics
- Input power ports
- Power over Ethernet (PoE)
- Test equipment
- POL converter protection
- Computer drives
- Displays
- Printers

SPECIFICATIONS, PACKAGING INFORMATION, AGENCY APPROVALS AND PART NUMBERING SYSTEMS FOR ALL FUSES

Table F1 — Environmental Specifications for All Fuses

Operating Temperature	-55°C to +125°C (for the 0603TSFV series the Operating Temperature is -55°C to +90°C)
Mechanical Vibration	Withstands 5-3000 Hz at 30Gs when evaluated per Method 204 of MIL-STD-202
Mechanical Shock	Withstands 1500Gs, 0.5 millisecond half-sine pulses when evaluated per Method 213 of MIL-STD-202
Thermal Shock	Withstands 100 cycles from -65°C to +125°C when evaluated per Method 107 of MIL-STD-202
Resistance to Soldering Heat	Withstands 60 seconds at +260°C when evaluated per Method 210 of MIL-STD-202
Solderability	Meets 95% minimum coverage requirement when evaluated per Method 208 of MIL-STD-202
Moisture Resistance	Withstands 10 cycles when evaluated per Method 106 of MIL-STD-202
Salt Spray	Withstands 48-hour exposure when evaluated per Method 101 of MIL-STD-202
Storage Condition	≤35°C/ 75% RH

Table F2 — Material Specifications for All Fuses

Construction Body Material	Ceramic (1206/0603/0402SFF, 1206/0603SFS, 1206/0603SFP, 1206SFH, 0603SFV)
	Fiberglass/Epoxy (2410SFV, 1206SFV, 0603TSFV)
Termination Material	Silver, Nickel, Tin (1206/0603/0402SFF, 1206/0603SFS, 1206/0603SFP, 1206SFH, 0603SFV)

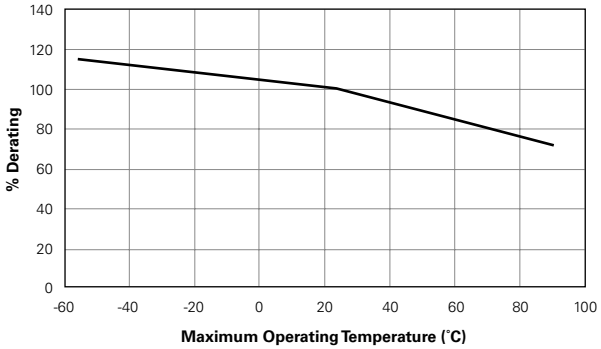
0603TSFV Series
Temperature Effect on Current Rating



1206SFV Series
Temperature Effect on Current Rating

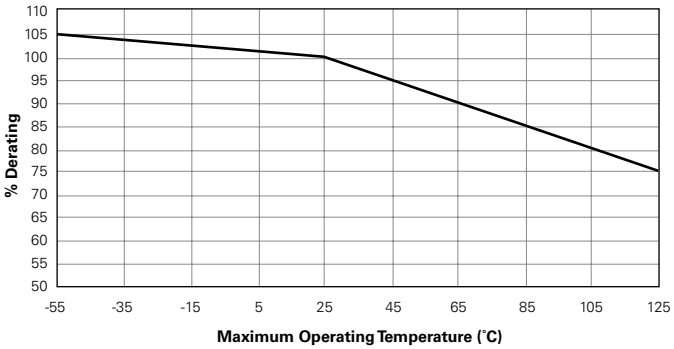


Table F3 — Electrical Specifications for All Fuses

Insulation Resistance after Opening	20,000Ω minimum @ rated voltage. Fuse clearing under low-voltage conditions may result in lower post- clearing insulation values. Under normal fault conditions TE Circuit Protection fuses help provide sufficient insulation resistance for circuit protection. **Notes:** for 1206SFV series, the minimum DCR is 10,000Ω; for 0603TSFV, the minimum DCR is 100Ω.
Current Carrying Capacity	Withstands 100% rated current at +25°C ambient for 4 hours when evaluated per MIL-PRF-23419.

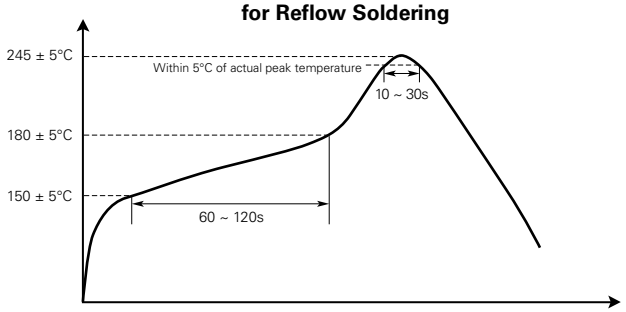
Recommended Temperature Profile for Reflow Soldering



Recommended Conditions for Hand Soldering:

1. Using a hot air rework station that can reflow the solder on both terminations at the same time is strongly recommended; do not directly contact the chip termination with the tip of soldering iron.
2. Preheating: 150°C, 60s (min)
   Appropriate temperature (max) of soldering iron tip/soldering time (max): 280°C /10s or 350°C /3s.

POLYSWITCH RESETTABLE DEVICES
Fundamentals

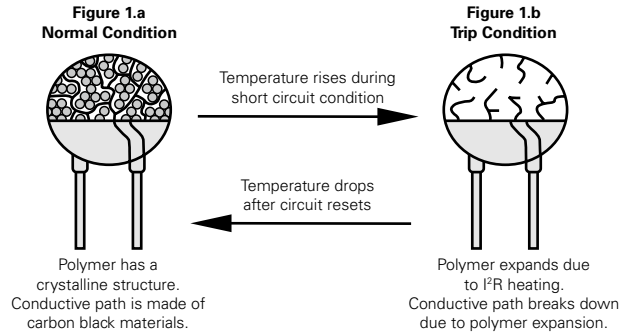
Overview

PolySwitch polymeric positive temperature coefficient (PPTC) devices help protect against damage caused by harmful overcurrent surges and overtemperature faults. Like traditional fuses, these devices limit the flow of dangerously high current during fault conditions. The PolySwitch device, however, resets after the fault is cleared and power to the circuit is removed, thereby helping to reduce warranty, service and repair costs.

PolySwitch circuit protection devices are made from a composite of semi-crystalline polymer and conductive particles. At normal temperature, the conductive particles form low-resistance networks in the polymer (Figure 1.a). However, if the temperature rises, either from high current through the part or from an increase in the ambient temperature, the crystallites in the polymer melt and become amorphous. The increase in volume during melting of the crystalline phase separates the conductive particles, resulting in a large non-linear increase in the resistance of the device.

Figure 1

How a PolySwitch Device Works



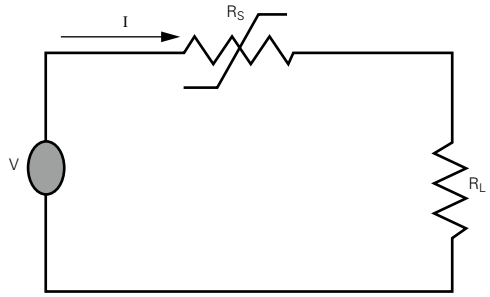
Overcurrent Protection Using a PPTC Device

The PPTC device is a series element in a circuit. The PPTC device helps protect the circuit by going from a low-resistance to a high-resistance state in response to an overcurrent condition, as shown in Figure 2. This is referred to as “tripping” the device.

In normal operation the device has a resistance that is much lower than that of the circuit. In response to an overcurrent condition, the device increases in resistance (trips), reducing the current in the circuit to a value that can be safely carried by any of the circuit elements. This change is the result of a rapid increase in the temperature of the device caused by I²R heating.

Figure 2

Typical PPTC Application



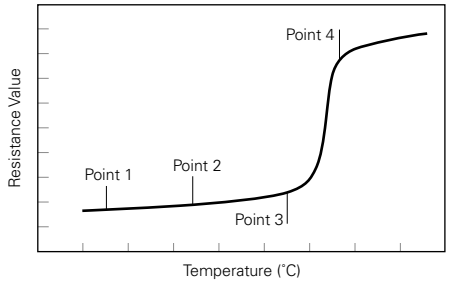
Principles of Operation

PolySwitch PPTC device’s operation is based on an overall energy balance, as shown in Figure 3. Under normal operating conditions, the heat generated by the device and the heat lost by the device to the environment are in balance at a relatively low temperature, as shown between Points 1 and 2.

If the current through the device is increased while the ambient temperature is kept constant, the temperature of the device increases. Further increases in either current, ambient temperature, or both, will cause the device to reach a temperature where the resistance rapidly increases, as shown in Point 3.

Figure 3

Example of Operating Curve for PPTC Device



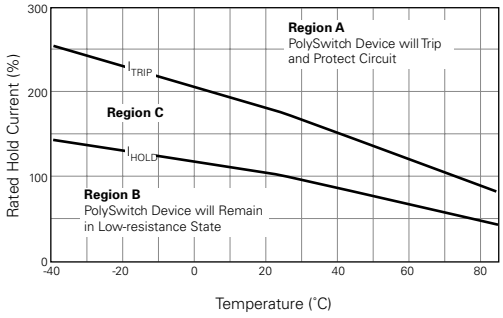
Any further increase in current or ambient temperature will cause the device to generate heat at a rate greater than the rate at which heat can be dissipated, thus causing the device to heat up rapidly. At this stage, a very large increase in resistance occurs for a very small change in temperature, between Points 3 and 4. This is the normal operating region for a device in the tripped state. This large change in resistance causes a corresponding decrease in the current flowing to the circuit. This relation holds until the device resistance reaches the upper knee of the curve (Point 4). As long as the applied voltage remains at this level, the device will remain in the tripped state (that is, the device will remain latched in its protective state). Once the voltage decreases, the power is removed and the device cools, the device will reset.

Example of Hold and Trip Current as a Function of Temperature

Figure 4 illustrates the hold- and trip-current behavior of a PolySwitch PPTC device as a function of temperature. One such curve can be defined for each available device. Region A describes the combinations of current and temperature at which the PolySwitch device will trip (go into the high-resistance state) and protect the circuit. Region B describes the combinations of current and temperature at which the PolySwitch device will allow for normal operation of the circuit. In Region C, it is possible for the device to either trip or remain in the low-resistance state (depending on individual device resistance).

Figure 4

Example of Hold and Trip Current as a Function of Temperature

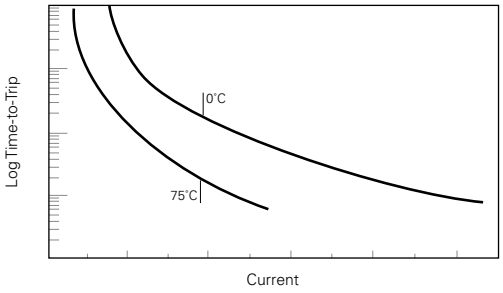


Operating Characteristics of a PolySwitch PPTC Device

Figure 5 shows a typical pair of operating curves for a PolySwitch device in still air at 0°C and 75°C. The curves are different because the heat required to trip the device comes both from electrical I^2R heating and from the device environment. At 75°C the heat input from the environment is substantially greater than it is at 0°C, so the additional I^2R needed to trip the device is correspondingly less. This results in a lower trip current at a given trip time (or a faster trip at given trip current).

Figure 5

Example of PolySwitch PPTC Device Operating Characteristics



Typical Resistance Recovery After a Trip Event

Figure 6 shows typical behavior of a PolySwitch device that is tripped and then allowed to cool. This figure illustrates how, even after a number of hours, the device resistance is still greater than the initial resistance. Over an extended period of time, device resistance will continue to fall and will eventually approach initial resistance.

However, since this time can be measured in days, months, or years, it is not practical to expect that the device resistance will reach the original value for operational purposes. Therefore, when PolySwitch devices are chosen, R_{1MAX} should be taken into consideration when determining hold current. R_{1MAX} is the resistance of the device one hour after the thermal event.

Figure 6

Typical Resistance Recovery After a Trip Event

PolySwitch Device Selection Guide

Step 1. Determine your circuit's parameters

You will need to determine the following parameters of your circuit:

- Maximum ambient operating temperature
- Normal operating current
- Maximum operating voltage
- Maximum interrupt current

Step 2. Select a PolySwitch device that will accommodate the circuit's maximum ambient temperature and normal operating current

Use the Thermal Derating [Hold Current (A) at Ambient Temperature (°C)] table on page 112 and choose the column with the temperature that most closely matches the circuit's maximum ambient temperature. Look down that column to find the value equal to or greater than the circuit's normal operating current. Now look to the far left of that row to find the part number that will best accommodate that current.

Step 3. Compare the selected device's maximum electrical ratings with the circuit's maximum operating voltage and interrupt current

Use the Electrical Characteristics table on page 111 to verify that the part you selected in Step 2 will handle your circuit's maximum operating voltage and interrupt current. Find the device's maximum operating voltage (V_{MAX}) and maximum interrupt current (I_{MAX}). Ensure that V_{MAX} and I_{MAX} are greater than or equal to the circuit's maximum operating voltage and maximum fault current.

Step 4. Determine time-to-trip

Time-to-trip is the amount of time it takes for a device to switch to a high-resistance state once a fault current has been applied through the device. Identifying the PolySwitch device's time-to-trip is important in order to provide the desired protection capabilities. If the chosen device trips too fast, undesired or nuisance tripping may occur. If the device trips too slowly, the components being protected may be damaged before the device can trip and limit the current.

Use the Typical Time-to-trip Curves at 20°C on page 110 Figure 5 to determine if the PolySwitch device's time-to-trip characteristics are acceptable at expected fault levels. If not, go back to Step 2 and choose an alternate device.

Step 5. Verify ambient operating temperature

Ensure that your application's minimum and maximum ambient temperatures are within the operating temperature of the PolySwitch device. Most PolySwitch devices have an operating temperature range from -40°C to 85°C with some exceptions to 125°C.

Step 6. Verify the PolySwitch device dimensions

Use the Dimensions table on pages 122-125 to compare the dimensions of the PolySwitch device you selected with the application's space considerations.

Definitions of terms

I_H	the maximum steady state current at 20°C that can be passed through a PolySwitch device without causing the device to trip
I_T	the minimum current that will cause the PolySwitch device to trip at 20°C
V_{MAX}	the maximum voltage that can safely be dropped across a PolySwitch device in its tripped state also called: Maximum Device Voltage, Maximum Voltage, Vmax, Max Interrupt Voltage
I_{MAX}	the maximum fault current that can safely be used to trip a PolySwitch device
P_D	the power (in Watts) dissipated by a PolySwitch device in its tripped state
R_{MAX}	the maximum resistance prior to the trip of a PolySwitch device
R_{MIN}	the minimum resistance prior to the trip of a PolySwitch device
R_{1MAX}	the maximum resistance of a PolySwitch device at 20°C 1 hour after being tripped and reset or after reflow soldering
$R_{Tripped\ Typ}$	the typical resistance of a PolySwitch device 1 hour after the initial trip and reset

POLYSWITCH RESETTABLE DEVICES
Surface-Mount Devices

PolySwitch surface-mount devices are an effective circuit protection method for computer, consumer, multimedia, portable and automotive electronics applications.

In an affort to reduce the size and cost of surface-mount devices, TE Circuit Protection introduced the miniSMD product series in 1995. Subsequently, we developed the microSMD, nanoSMD, picoSMD and femtoSMD family of products. The femtoSMD series reduced the device size to a 1608mm (0603 mils) footprint, which is one-twelfth the size of the popular miniSMD series.

Recent additions to the PolySwitch surface-mount series include 1.1A picoSMD 1210mm (0805 mils) and 0.35A femtoSMD 1608mm (0603 mils) devices.

BENEFITS

- Smaller size helps save board space and cost
- Many product choices optimizes design flexibility
- Compatible with high-volume electronics assembly
- Assists in meeting regulatory requirements
- Higher voltage ratings allow use in new applications

FEATURES

- RoHS compliant
- Halogen free
  (refers to: Br≤900ppm, Cl≤900ppm, Br+Cl≤1500ppm)
- Broadest range of resettable devices available in the industry
- Current ratings from 0.05 to 3.1A
- Voltage ratings from 6V computer and electronic applications to 60V telecom applications
- Agency recognition: UL, CSA, TÜV
- Small footprint
- Fast time-to-trip
- Low resistance

APPLICATIONS

- Computer
- Portable electronics
- Multimedia
- Game machines
- Telephony and broadband
- Mobile phones
- Automotive
- Industrial controls
- Battery

Application Selection Table

- The table below lists PolySwitch surface-mount devices recommended for use in typical applications
- Specifications for the suggested PolySwitch surface-mount device part numbers can be found in this table
- Once a part has been selected, the user should evaluate and test each product for the intended application

			PolySwitch Resettable Devices - Key Selection Criteria		
Protection Application	**Additional Comments**	**Overcurrent Overvoltage**	**Small Size**	**Low Resistance**	**Fast Time-to-trip (Temperature Protection)**
AC Adapter Input Power	Use w/ Zener & Triac		SMD250F	SMD250F	SMD200F

Table S5 — Physical Characteristics and Environmental Specifications

Operating temperature range -40°C to 85°C, -40°C to 125°C for SMDH120, SMDH160 and High Temperature SMD

Physical Characteristics			
Terminal Pad Material	100% Matte Tin with Nickel Underplate		
Soldering Characteristics	ANSI/J-STD-002 Category 3 for femtoSMD, picoSMD, nanoSMD, microSMD, miniSMD and SMDC Series		
	ANSI/J-STD-002 Category 1 for SMD Series		
Solder Heat Withstand	per IEC-STD 68-2-20, Test Tb, Section 5, Method 1A		
Flammability Resistance	per IEC 695-2-2 Needle Flame Test for 20 seconds		
Recommended Storage Conditions	40°C max, 70% R.H. max; Devices May Not Meet Specified Ratings if Storage Conditions Are Exceeded		
Environmental Specifications			
Test	**Test Method**	**Conditions**	**Resistance Change**
Storage Life	PS300, Section 5.3.2	60°C, 1000 hrs	±3% typ
		85°C, 1000 hrs	±5% typ
Humidity Aging	PS300, Section 5.3.1	85°C, 85% RH, 100 hrs	±1.2% typ
Thermal Shock	MIL-STD-202, Method 107G	85°C, -40°C (20 Times)	-33% typ
		125°C, -55°C (10 Times)	-33% typ
Vibration	MIL-STD-883C	per MIL-STD-883C	No Change
Solvent Resistance	PS300, Section 5.2.2	Freon	No Change
		Trichloroethane	No Change
		Hydrocarbons	No Change

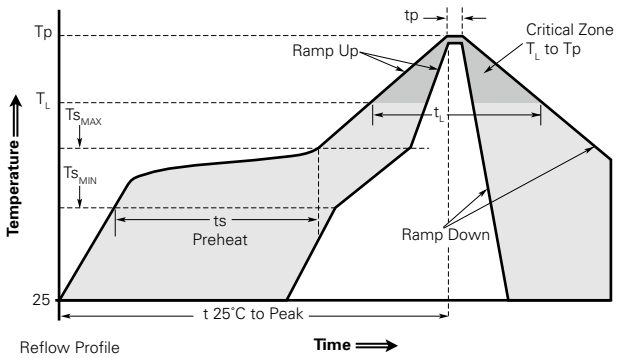
Solder Reflow and Rework Recommendation

Classification Reflow Profiles

Profile Feature	Pb-Free Assembly
Average Ramp-up Rate (Ts_{MAX} to Tp)	3°C/s max
Preheat	
• Temperature min (Ts_{MIN})	150°C
• Temperature max (Ts_{MAX})	200°C
• Time (ts_{MIN} to ts_{MAX})	60-120s
Time Maintained Above:	
• Temperature (T_L)	217°C
• Time (t_L)	60-150s
Peak/Classification Temperature (Tp)	260°C
Time within 5°C of Actual Peak Temperature	
Time (tp)	30s max
Ramp-down Rate	3°C/s max
Time 25°C to Peak Temperature	8 mins max

Note: All temperatures refer to topside of the package, measured on the package body surface.

Figure S17



Solder Reflow

- Recommended reflow methods:
  - IR
  - Hot air
  - Nitrogen
- Recommended maximum paste thickness: 0.25mm (0.010in)
- Devices can be cleaned using standard methods and aqueous solvents.
- Experience has shown the optimum conditions for forming acceptable solder fillets occur when a reasonable amount of solder paste is placed underneath each device's termination. As such, we request that customers comply with our recommended solder pad layouts.
- Customer should validate that the solder paste amount and reflow recommendations meet its application.
- We request that customer board layouts refrain from placing raised features (e.g. vias, nomenclature, traces, etc.) underneath PolySwitch devices. It is possible that raised features could negatively impact solderability performance of our devices.

Rework

- femtoSMD, picoSMD, nanoSMD, microSMD, miniSMD and SMDC series: standard industry practices.
  (Please also avoid direct contact to the device.)
- SMD series: Rework should be confined to removal of the installed product and replacement with a fresh device.

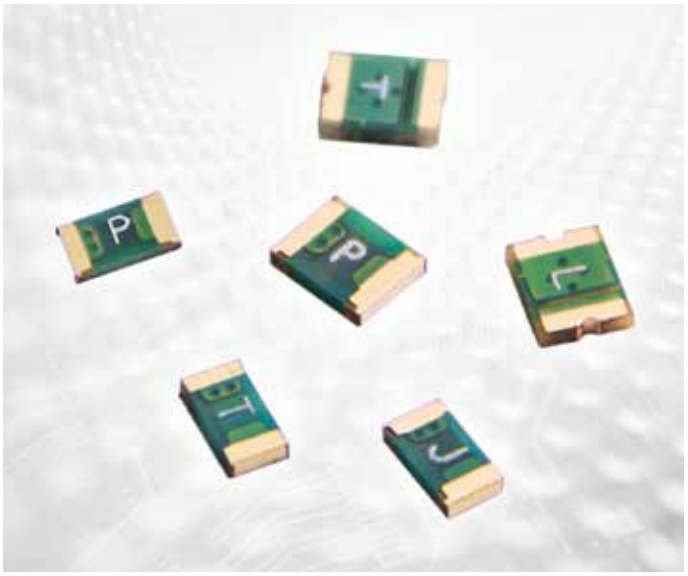
⚠ Warning :

- Users should independently evaluate the suitability of and test each product selected for their own application.
- Operation beyond the maximum ratings or improper use may result in device damage and possible electrical arcing and flame.
- These devices are intended for protection against damage caused by occasional overcurrent or overtemperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated.
- Contamination of the PPTC material with certain silicone-based oils or some aggressive solvents can adversely impact the performance of the devices.
- Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal, and mechanical procedures for electronic components.
- PPTC devices are not recommended for installation in applications where the device is constrained such that its PTC properties are inhibited, for example in rigid potting materials or in rigid housings, which lack adequate clearance to accommodate device expansion.
- Operation in circuits with a large inductance can generate a circuit voltage (Ldi/dt) above the rated voltage of the device.

POLYSWITCH RESETTABLE DEVICES
Low Resistivity SMD Devices

The low resistivity SMD (surface-mount device) series is well suited to space-constrained mobile applications. The devices can help provide both overcurrent and overtemperature protection for battery pack PCMs (protection circuit modules) used in compact consumer devices such as smartphones and MP3/MP4 media players. In particular, the low resistivity SMD series helps battery pack suppliers achieve their design goals and simplify their installation methods.

The low resistivity SMD series comprises eleven devices. In the model number descriptions, the “micro” prefix refers to the 1210 form factor and the “nano” prefix refers to the 1206 form factor.



BENEFITS

- Helps save board space and power consumption, and therefore costs, in space-constrained mobile electronics
- Are more compact in comparison with similar offerings and are available in an industry-standard form factor
- Can be assembled with a reflowable soldering technique, as opposed to the spot welding process required by many other components
- Maximum electrical rating: Voltage $6V_{DC}$ and short circuit current 50A
- Industry-standard form factor of 1210 (3.0mmx2.54mm, or 0.12inx0.10in), or 1206 (3.0mmx1.52mm; or 0.12inx0.060in)
- Useful for an operating current of 2A and above
- Useful for and packaged for surface mounting on the PCB

APPLICATIONS

- Mobile and smart phones
- Media players (MP3/MP4)
- Digital still and video cameras
- Mini notebooks
- Tablets

FEATURES

- RoHS compliant
- Halogen free
  (refers to: Br≤900ppm, Cl≤900ppm, Br+Cl≤1500ppm)
- Current ratings from 1.75 to 5.0A
- Agency recognition: UL, CSA, TÜV
- Small footprint
- Fast time-to-trip

Table LR4 — Physical Characteristics Operating Temperature Range -40°C to 85°C

Physical Characteristics	
Terminal Pad Material	Gold with Nickel Underplate
Soldering Characteristics	ANSI/J-STD-002 Category 3
Solder Heat Withstand	per IEC-STD 68-2-20, Test Tb, Section 5, Method 1A
Flammability Resistance	per IEC 695-2-2 Needle Flame Test for 20 sec.
Recommended Storage Conditions	40°C max, 70% R.H. max; Devices May Not Meet Specified Ratings if Storage Conditions Are Exceeded.

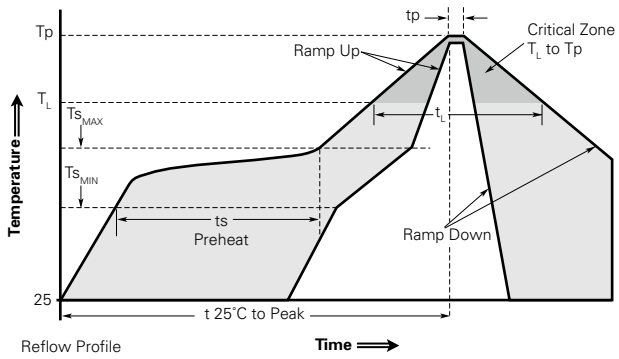
Solder Reflow Recommendation

Classification Reflow Profiles

Profile Feature	Pb-Free Assembly
Average Ramp-up Rate (Ts_{MAX} to Tp)	3°C/s max
Preheat	
• Temperature min (Ts_{MIN})	150°C
• Temperature max (Ts_{MAX})	200°C
• Time (ts_{MIN} to ts_{MAX})	60-120s
Time Maintained Above:	
• Temperature (T_L)	217°C
• Time (t_L)	60-150s
Peak/Classification Temperature (Tp)	260°C
Time within 5°C of Actual Peak Temperature	
Time (tp)	30s max
Ramp-down Rate	2°C/s max
Time 25°C to Peak Temperature	8 mins max

Note: All temperatures refer to topside of the package measured on the package body surface.

Figure LR5



Solder Reflow

- Recommended reflow methods:
  - IR
  - Hot air
  - Nitrogen
- Recommended maximum paste thickness: 0.25mm (0.010 inch)
- Devices can be cleaned using standard methods and aqueous solvents.
- Experience has shown the optimum conditions for forming acceptable solder fillets occur when a reasonable amount of solder paste is placed underneath each device's termination. As such, we request that customers comply with our recommended solder pad layouts.
- Customer should validate that the solder paste amount and reflow recommendations meet its application.
- We request that customer board layouts refrain from placing raised features (e.g. vias, nomenclature, traces, etc.) underneath PolySwitch devices. It is possible that raised features could negatively impact solderability performance of our devices.

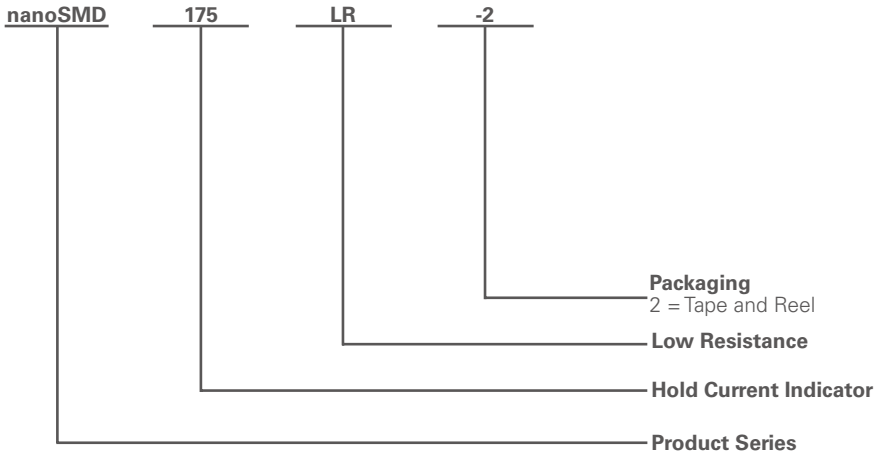
Part Numbering System



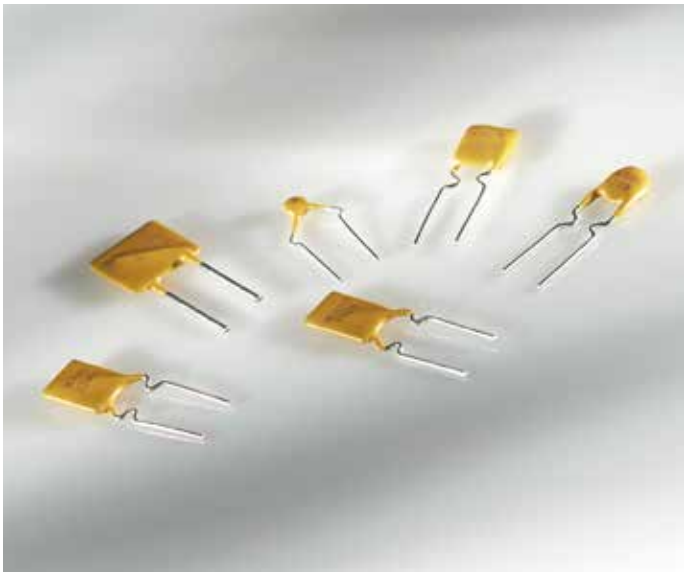
⚠ Warning :

- Users should independently evaluate the suitability of and test each product selected for their own application.
- Operation beyond the maximum ratings or improper use may result in device damage and possible electrical arcing and flame.
- These devices are intended for protection against damage caused by occasional overcurrent or overtemperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated.
- Contamination of the PPTC material with certain silicone-based oils or some aggressive solvents can adversely impact the performance of the devices.
- Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal, and mechanical procedures for electronic components.
- PPTC devices are not recommended for installation in applications where the device is constrained such that its PTC properties are inhibited, for example in rigid potting materials or in rigid housings, which lack adequate clearance to accommodate device expansion.
- Operation in circuits with a large inductance can generate a circuit voltage (Ldi/dt) above the rated voltage of the device.

POLYSWITCH RESETTABLE DEVICES
Radial-Leaded Devices

TE Circuit Protection's PolySwitch radial-leaded products represent the most comprehensive and complete set of PPTC products available in the industry today.

- RGEF series for hold currents up to 14A
- RHEF series for flatter thermal derating and operating temperatures up to 125°C
- RUEF series for balance of voltage rating (30V) and hold current (up to 9A)
- RUSBF series for fast time-to-trip and low-resistance computer applications
- RXEF series for low hold currents (down to 50mA) and high voltage rating (up to 72V)
- RKEF series for balance of voltage rating (60V) and hold current (up to 5A)
- Now offering halogen free versions of all products



BENEFITS

- Many product choices help provide engineers more design flexibility
- Compatible with high-volume electronics assembly
- Assists in meeting regulatory requirements
- Higher voltage ratings allow use in new applications

FEATURES

- RoHS compliant
- Halogen free
  (refers to: Br≤900ppm, Cl≤900ppm, Br+Cl≤1500ppm)
- Broadest range of radial-leaded resettable devices available in the industry
- Current ratings from 50mA to 15A
- Voltage ratings from 6V (computer and electronic applications) to 72V
- Agency recognition : UL, CSA, TÜV, CQC**
- Fast time-to-trip
- Low resistance

**CQC only applies to RXEF, RUEF family parts

APPLICATIONS

- Satellite video receivers
- Industrial controls
- Transformers
- Modems
- CD-ROMs
- Game machines
- Phones
- Fax machines
- Analog and digital line cards
- Printers
- Intelligent appliance
- Robotic machine
- Power supply
- Security
- Lighting
- Medical application

Application Selection Guide

The guide below lists PolySwitch radial-leaded devices that are typically used in each of the applications described.
Specifications for the suggested device part numbers can be found in this section.
Once a part number has been selected, the user should evaluate and test each product for its intended application.

Protection Application	PolySwitch Resettable Devices — Key Selection Criteria		
	Small Size	Flatter Derating	Lower Current Higher Voltage
Electromagnetic Loads	RGEF (<16V), RUEF (<30V)	RHEF (<16V)	RXEF (<72V), RKEF (<60V)
Halogen Lighting	RGEF (<16V), RUEF (<30V)	RHEF (<16V)	RXEF (<72V), RKEF (<60V)
Lighting Ballast	RXEF (<72V)		
Loudspeakers	RXEF (<72V)		RXEF (<72V), RKEF (<60V)
Medical Equipment	RGEF (<16V), RUEF (<30V)	RHEF (<16V)	RXEF (<72V), RKEF (<60V)
MOSFET Devices	RGEF (<16V), RUEF (<30V)	RHEF (<16V)	RXEF (<72V), RKEF (<60V)
Motors, Fans and Blowers	RXEF (<72V), RGEF (<16V)	RHEF (<16V)	
POS Equipment	RXEF (<72V), RUEF (<30V)		
Process and Industrial Controls	RXEF (<72V), RUEF (<30V)		
Satellite Video Receivers	RGEF (<16V), RUEF (<30V)	RHEF (<16V)	RXEF (<72V), RKEF (<60V)
Security and Fire Alarm Systems	RGEF (<16V), RUEF (<30V)	RHEF (<16V)	RXEF (<72V), RKEF (<60V)
Test and Measurement Equipment	RGEF (<16V), RUEF (<30V)	RHEF (<16V)	RXEF (<72V), RKEF (<60V)
Transformers	RGEF (<16V), RUEF (<30V)	RHEF (<16V)	RXEF (<72V), RKEF (<60V)
DDC Computer and Consumer Electronics	RUEF (<30V)		
Mouse and Keyboard	RUEF (<30V)		
SCSI	RUEF (<30V)		
USB	RUSBF (<16V)		
Traces and Printed Circuit Board Protection	RGEF (<16V), RUEF (<30V)	RHEF (<16V)	RXEF (<72V), RKEF (<60V)

Note : This list is not exhaustive. TE Circuit Protection welcomes customer input for additional application ideas for PolySwitch resettable devices.

Notes:
I_H : Hold current: maximum current device will pass without interruption in 20°C still air.
I_T : Trip current: minimum current that will switch the device from low resistance to high resistance in 20°C still air.
V_{MAX} : Maximum continuous voltage device can withstand without damage at rated current.
I_{MAX} : Maximum fault current device can withstand without damage at rated voltage.
P_D : Power dissipated from device when in the tripped state in 20°C still air.
R_{MIN} : Minimum resistance of device as supplied at 20°C unless otherwise specified.
R_{MAX} : Maximum resistance of device as supplied at 20°C unless otherwise specified.
R_{1MAX} : Maximum resistance of device when measured one hour post reflow (surface-mount device) or one hour post trip (radial-leaded device) at 20°C unless otherwise specified.
* Electrical characteristics determined at 25°C.

Table R5 — Physical Characteristics and Environmental Specifications

RXEF

Physical Characteristics

Lead Material	RXEF005	: Tin-plated Nickel-copper Alloy, 0.128mm² (26AWG), ø0.40mm (0.016in)
	RXEF010	: Tin-plated Nickel-copper Alloy, 0.205mm² (24AWG), ø0.51mm (0.020in)
	RXEF017 to 040	: Tin-plated Copper-clad Steel, 0.205mm² (24AWG), ø0.51mm (0.020in)
	RXEF050 to 090	: Tin-plated Copper, 0.205mm² (24AWG), ø0.51mm (0.020in)
	RXEF110 to 375	: Tin-plated Copper, 0.52mm² (20AWG), ø0.81mm (0.032in)
Soldering Characteristics	Solderability per ANSI/J-STD-002 Category 3	
	RXEF005, RXEF010 Meet ANSI/J-STD-002 Category 1	
Solder Heat Withstand	RXEF005- RXEF025: per IEC-STD 68-2-20, Test Tb, Method 1a, Condition a; Can Withstand 5s at 260°C ±5°C	
	All Other Sizes	: per IEC-STD 68-2-20, Test Tb, Method 1a, Condition b; Can Withstand 10s at 260°C ±5°C
Insulating Material	Cured, Flame-retardant Epoxy Polymer; Meets UL 94V-0	
Operation Temperature	-40°C~85°C	

Note: Devices are not designed to be placed through a reflow process.

Environmental Specifications

Test	Conditions	Resistance Change
Passive Aging	-40°C, 1000 hrs	±5%
	85°C, 1000 hrs	±5%
Humidity Aging	85°C, 85% RH, 1000 hrs	±10%
Thermal Shock	85°C, -40°C (10 Times)	±10%
Solvent Resistance	MIL-STD-202, Method 215F	No Change

RKEF

Physical Characteristics

Lead Material	RKEF050 to 090	: Tin-plated Copper, 0.205mm² (24AWG), ø0.51mm (0.020in)
	RKEF110 to 500	: Tin-plated Copper, 0.52mm² (20AWG), ø0.81mm (0.032in)
Soldering Characteristics	Solderability per ANSI/J-STD-002 Category 3	
Solder Heat Withstand	RKEF050-RKEF185: per IEC-STD 68-2-20, Test Tb, Method 1a, Condition a; Can Withstand 5s at 260°C ±5°C	
	All Other Sizes	: per IEC-STD 68-2-20, Test Tb, Method 1a, Condition b; RKEF Can Withstand 10s at 260°C ±5°C
Insulating Material	Cured, Flame-retardant Epoxy Polymer; Meets UL 94V-0	
Operation Temperature	-40°C~85°C	

Note: Devices are not designed to be placed through a reflow process.

Environmental Specifications

Test	Conditions	Resistance Change
Passive Aging	-40°C, 1000 hrs	±5%
	85°C, 1000 hrs	±5%
Humidity Aging	85°C, 85% RH, 1000 hrs	±10%
Thermal Shock	85°C, -40°C (10 Times)	±10%
Solvent Resistance	MIL-STD-202, Method 215F	No Change

Table R5 — Physical Characteristics and Environmental Specifications (Cont'd)

RUEF

Physical Characteristics

Lead Material	RUEF090 to RUEF250: Tin-plated Copper-clad Steel, 0.205mm² (24AWG)
	RUEF300 to RUEF900: Tin-plated Copper, 0.52mm² (20AWG), ø0.81mm (0.032in)
Soldering Characteristics	Solderability per ANSI/J-STD-002 Category 3
Solder Heat Withstand	per IEC-STD 68-2-20, Test Tb, Method1A, Condition B, Can Withstand 10s at 260°C ±5°C
Insulating Material	Cured, Flame-retardant Epoxy Polymer; Meets UL 94V-0
Operation Temperature	-40°C~85°C

Note: Devices are not designed to be placed through a reflow process.

Environmental Specifications

Test	Conditions	Resistance Change
Passive Aging	70°C, 1000 hrs	±5%
	85°C, 1000 hrs	±5%
Humidity Aging	85°C, 85%RH, 1000 hrs	±5%
Thermal Shock	85°C, -40°C (10 times)	±5%
Solvent Resistance	MIL-STD-202, Method 215F	No Change

RUSBF

Physical Characteristics

Lead Material	RUSBF075 : Tin-plated Nickel-copper Alloy, 0.205mm² (24AWG), ø0.51mm/0.020in
	RUSBF090 to RUSBF250: Tin-plated Copper-clad Steel, 0.205mm² (24AWG), ø0.51mm/0.020in
Soldering Characteristics	Solderability per ANSI/J-STD-002 Category 3 Except
	RUSBF075 Meet ANSI/J-STD-002 Category 1
Solder Heat Withstand	RUSBF120: per IEC-STD 68-2-20, Test Tb, Method 1A, Condition A; Can Withstand 5s at 260°C ±5°C
	All Others : per IEC-STD 68-2-20, Test Tb, Method 1A, Condition B; Can Withstand 10s at 260°C ±5°C
Insulating Material	Cured, Flame-retardant Epoxy Polymer; Meets UL 94V-0
Operation Temperature	-40°C~85°C

Note: Devices are not designed to be placed through a reflow process.

Environmental Specifications

Test	Conditions	Resistance Change
Passive Aging	70°C, 1000 hrs	±5%
	85°C, 1000 hrs	±5%
Humidity Aging	85°C, 85%RH, 1000 hrs	±5%
Thermal Shock	85°C, -40°C (10 Times)	±5%
Solvent Resistance	MIL-STD-202, Method 215F	No change

Table R5 — Physical Characteristics and Environmental Specifications (Cont'd)

RGEF

Physical Characteristics

Lead Material	RGEF250	: Tin-plated Copper-clad Steel, 0.205mm² (24AWG), ø0.51mm/0.020in
	RGEF300 to RGEF1100	: Tin-plated Copper, 0.52mm² (20AWG), ø0.81mm/0.032in
	RGEF1200 to RGEF1400	: Tin-plated Copper, 0.82mm² (18AWG), ø1.0mm/0.04in
Soldering Characteristics	Solderability per ANSI/J-STD-002 Category 3	
Solder Heat Withstand	RGEF250 and RGEF400 : per IEC 68-2-20, Test Tb, Method 1a, Condition a; can withstand 5s at 260°C ±5°C	
	RGEF500 to RGEF1400 : per IEC 68-2-20, Test Tb, Method 1a, Condition b; can withstand 10s at 260°C ±5°C	
Insulating Material	Cured, Flame-retardant Epoxy Polymer; Meets UL 94V-0	
Operation Temperature	-40°C~85°C	

Note: Devices are not designed to be placed through a reflow process.

Environmental Specifications

Test	Conditions	Resistance Change
Passive Aging	-40°C, 1000 hrs	±5%
	85°C, 1000 hrs	±5%
Humidity Aging	85°C, 85% RH, 1000 hrs	±5%
Thermal Shock	85°C, -40°C (10 Times)	±5%
Solvent Resistance	MIL-STD-202, Method 215F	No Change

RHEF

Physical Characteristics

Lead Material	RHEF050 to RHEF200	: Tin-plated Copper-clad Steel, 0.205mm² (24AWG), ø0.51mm/0.020in
	RHEF300 to RHEF1100	: Tin-plated Copper, 0.52mm² (20AWG), ø0.81mm/0.032in
	RHEF1300 to RHEF1500	: Tin-plated Copper, 0.82mm² (18AWG), ø1.0mm/0.04in
Soldering Characteristics	Solderability per ANSI/J-STD-002 Category 3	
Solder Heat Withstand	per IEC 68-2-20, Test Tb, Method 1A, Condition B; Can Wthstand 10s at 260°C ±5°C	
Insulating Material	Cured, Flame-retardant Epoxy Polymer; Meets UL 94V-0	
Operation Temperature	-40°C~125°C	

Note: Devices are not designed to be placed through a reflow process.

Environmental Specifications

Test	Conditions	Resistance Change
Passive Aging	70°C, 1000 hrs	±5%
	85°C, 1000 hrs	±5%
Humidity Aging	85°C, 85% RH, 1000 hrs	±5%
Thermal Shock	125°C, -40°C (10 Times)	±5%
Solvent Resistance	MIL-STD-202, Method 215F	No Change

Storage Conditions

Storage Conditions	40°C max, 70% RH max; devices should remain in original sealed bags prior to use. Devices may not meet specified values if these storage conditions are exceeded.

Note: For the TR devices series, see the telecommunications and networking devices section.

Table R6 — Packaging and Marking Information

Figure R21 — EIA Referenced Taped Component Dimensions

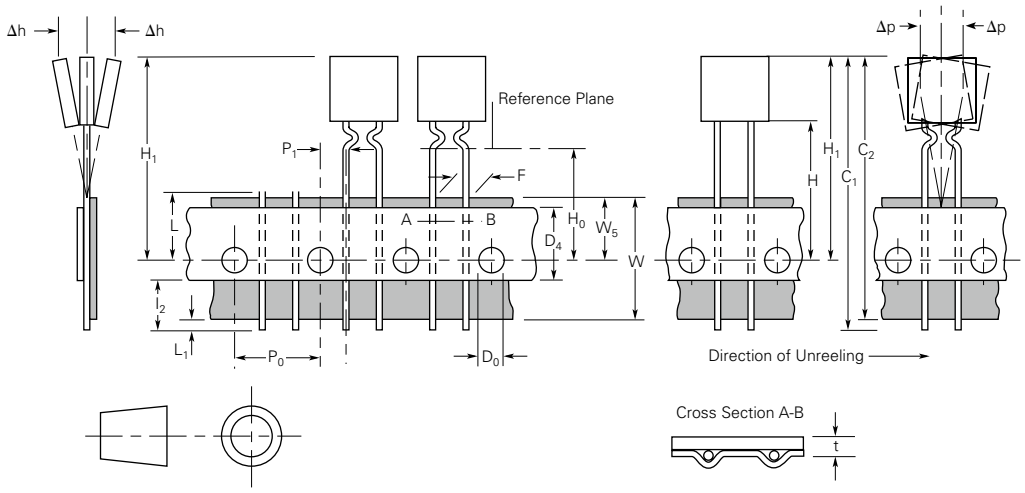

Figure R22 — EIA Referenced Reel Dimensions

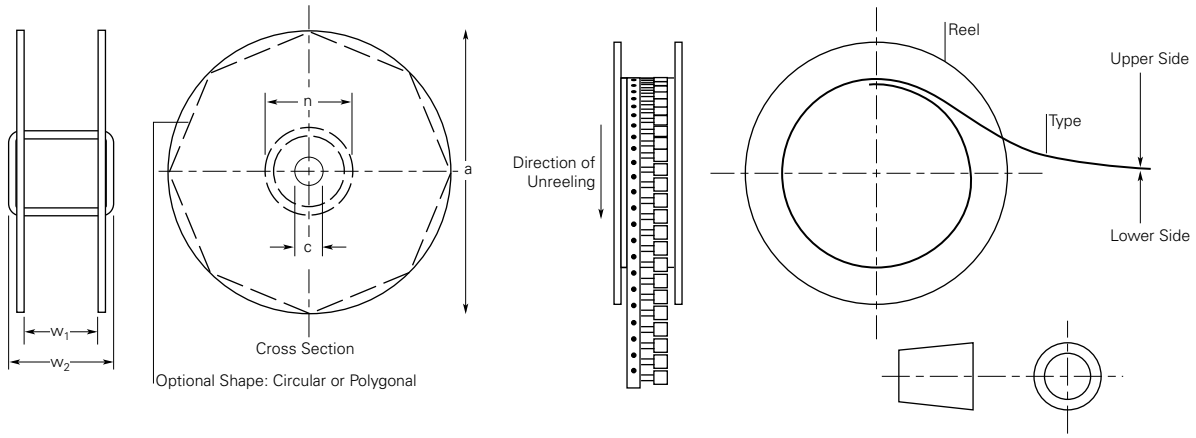
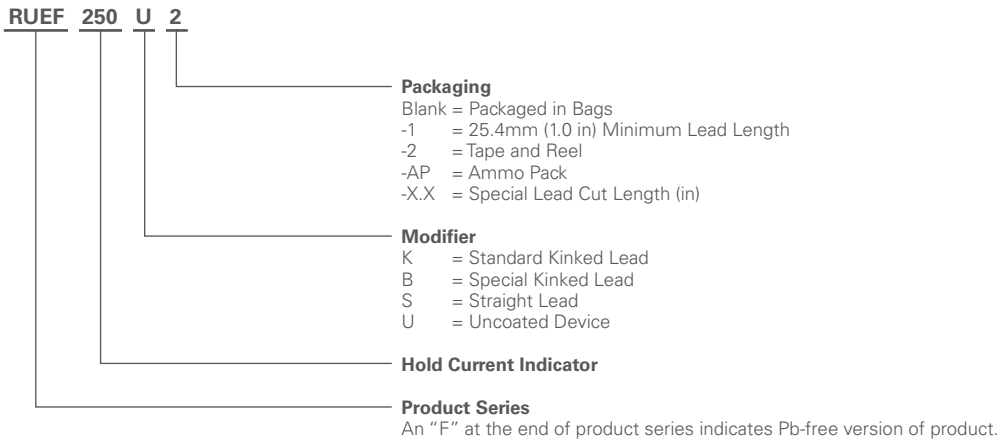


Part Numbering System



Note: Kinked parts are recommended to control the height of the part on the PCB in non-auto PCB applications.

⚠ Warning :

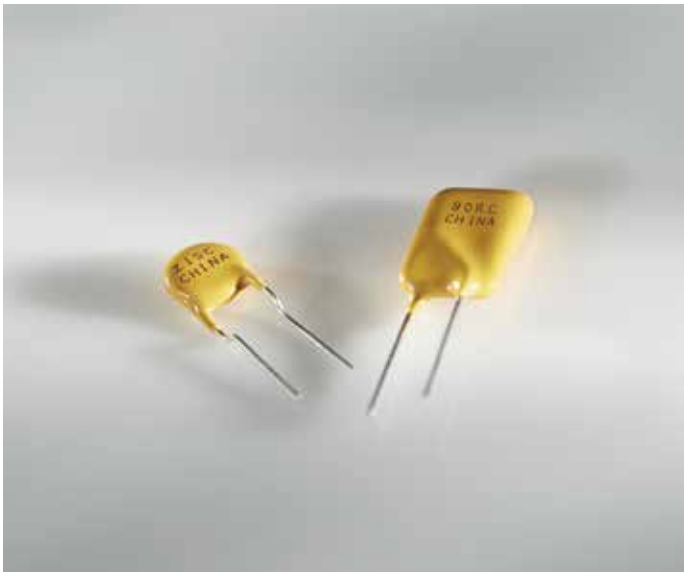
- Users should independently evaluate the suitability of and test each product selected for their own application.
- Operation beyond the maximum ratings or improper use may result in device damage and possible electrical arcing and flame.
- These devices are intended for protection against damage caused by occasional overcurrent or overtemperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated.
- Contamination of the PPTC material with certain silicone-based oils or some aggressive solvents can adversely impact the performance of the devices.
- Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal, and mechanical procedures for electronic components.
- PPTC devices are not recommended for installation in applications where the device is constrained such that its PTC properties are inhibited, for example in rigid potting materials or in rigid housings, which lack adequate clearance to accommodate device expansion.
- Operation in circuits with a large inductance can generate a circuit voltage (Ldi/dt) above the rated voltage of the device.

POLYSWITCH RESETTABLE DEVICES
Line-Voltage-Rated Devices

PolySwitch line-voltage-rated (LVR) devices help protect electric motors and transformers used in commercial and home appliances from damage caused by mechanical overloads, overheating, stall, lost neutral and other potentially harmful conditions.

The LVR line-voltage product line of polymeric positive temperature coefficient (PPTC) devices includes components that are rated for line voltages of $120V_{AC}$ and $240V_{AC}$, for up to 2A of operating current at 20°C. They help protect against damage caused by both overcurrent surges and overtemperature faults. They also offer low resistance and are compatibly sized with fuse solutions.

Unlike traditional fuses, PolySwitch devices do not require replacement after a fault event. After power has been removed and the overcurrent condition eliminated, the circuit is restored to normal operating condition. Compared to bimetal breakers, they offer greater flexibility, longer lifespan and lower electromagnetic interference (EMI).



The PolySwitch LVR devices' resettable functionality and latching attributes make them a reliable, cost-effective circuit protection solution for both intermittent- and continuous-operation motor applications. Their low resistance, fast time-to-trip, and low profile help circuit designers provide a safe and dependable product, comply with regulatory agency requirements and reduce warranty repair costs.

LVR/LVB series are suitable for line-voltage applications up to a continuous operating voltage of $240V_{AC}/120V_{AC}$.

RoHS versions of all products are available.

BENEFITS

- Choice of many devices helps provide engineers with design flexibility
- Compatible with high-volume electronics assembly
- Assist in meeting regulatory requirements
- Higher voltage ratings allow use in new applications

FEATURES

- RoHS compliant
- Broadest range of radial-leaded resettable devices available in the industry
- Current ratings from 50mA to 2A
- Line voltage rating of $120V_{AC}$ and $240V_{AC}$
- Agency recognition : UL, CSA, TÜV, CQC
- Fast time-to-trip
- Low resistance

APPLICATIONS

- Electromagnetic loads
- Game machines
- Industrial controls
- Lighting ballasts
- Loudspeakers
- Medical equipment
- Motors, fans and blowers
- POS equipment
- Satellite video receivers
- Security and fire alarm systems
- Test and measurement equipment
- Transformers
- USB hubs, ports and peripherals
- Intelligent appliance
- Robotic machine

Notes:

I_H : Hold current: maximum current device will pass without interruption in 20°C still air.
I_T : Trip current: minimum current that will switch the device from low resistance to high resistance in 20°C still air.
V_{MAX} Operating: Maximum continuous voltage device can withstand without damage at rated current.
V_{MAX} Interrupt : Under specified conditions this is the highest voltage that can be applied to the device at the maximum interrupt current.
I_{MAX} Interrupt : Maximum fault current device can withstand without damage at rated voltage.
P_D : Power dissipated from device when in the tripped state in 20°C still air.
R_{MIN} : Minimum resistance of device as supplied at 20°C unless otherwise specified.
R_{MAX} : Maximum resistance of device as supplied at 20°C unless otherwise specified.
R_{1MAX} : Maximum resistance of device when measured one hour post trip at 20°C unless otherwise specified.

* Electrical characteristics determined at 20°C.
† See Application Limitations on next page.

Table L5 — Physical Characteristics and Environmental Specifications

LVR/LVB		
Physical Characteristics		
Lead Material	LVR005N to LVR016	: Tin-plated Copper, (24AWG), ø0.51mm (0.020in)
	LVR025 to LVR040	: Tin-plated Copper, (22AWG), ø0.64mm (0.025in)
	LVR055 to LVR200	: Tin-plated Copper, (20AWG), ø0.81mm (0.032in)
	LVR075-240 to LVR200-240	: Tin-plated Copper, (20AWG), ø0.81mm (0.032in)
	LVB125	: Tin-plated Copper, (20AWG), ø0.81mm (0.032in)
Soldering Characteristics	Solderability per ANSI/J-STD-002 Category 3	
Solder Heat Withstand	Per IEC-STD 68-2-20, Test Tb, Method 1A, Condition B, Can Withstand 10 s at 260°C ±5°C	
Insulating Material	LVR005N to LVR055	: Cured, Flame-retardant Epoxy Polymer, Meets UL 94V-0
	LVR075 to LVR200	: Cured, Flame-retardant Modified Silicone, Meets UL 94V-0
	LVR075-240 to LVR200-240	: Cured, Flame-retardant Epoxy Polymer, Meets UL 94V-0
	LVB125	: Glass Reinforced PBT, Meets UL 94V-0

Note: Devices are not intended to be placed through a reflow process.

Environmental Specifications

Test	Conditions	Resistance Change
Passive Aging	70°C, 1000 hrs	±10%
	85°C, 1000 hrs	±10%
Humidity Aging	85°C, 85% RH, 1000 hrs	±20%
Thermal Shock	85°C, -40°C (10 Times)	±15%
Solvent Resistance	MIL-STD-202, Method 215F	No Change

Agency Recognitions

UL	File # E74889
CSA	File # CA78165
TÜV	Certificate Number Available on Request (per IEC 60730-1).

Table L7 — Tape and Reel Specifications

LVR devices are available in tape and reel packaging per EIA468-B/IEC60286-2 standards.
See Figures L9 and L10 for details.

Description	EIA Mark	Dimension (mm)	Tolerance
Carrier Tape Width	W	18	-0.5/+1.0
Hold-down Tape Width	W_4	11	Minimum
Top Distance between Tape Edges	W_6	3	Maximum
Sprocket Hole Position	W_5	9	-0.5/+0.75
Sprocket Hole Diameter	D_0	4	± 0.2
Abscissa to Plane (Straight Lead) (LVR005N to LVR200)	H	18.5	± 2.5
Abscissa to Plane (Kinked Lead) (LVR005N to LVR055)	H_0	16.0	± 0.5

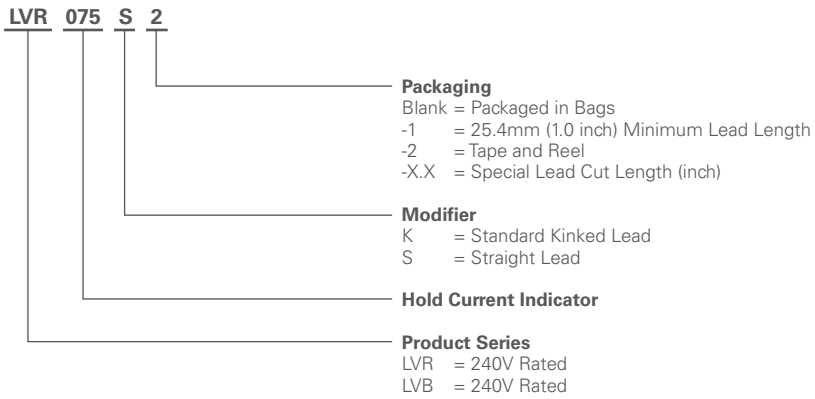
Part Numbering System



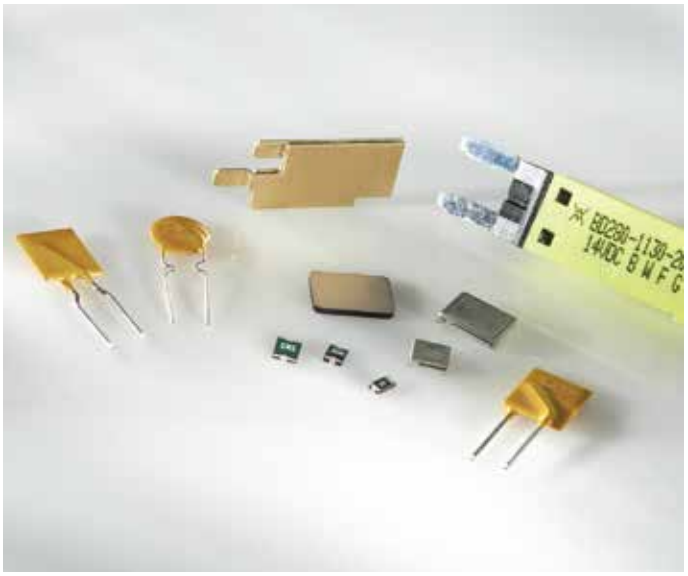
⚠ Warning : Application Limitations for the LVR Product Line

- Users should independently evaluate the suitability of and test each product selected for their own application.
- This product should not be used in an application where the maximum interrupt voltage or maximum interrupt current can be exceeded in a fault condition. Operation beyond the maximum ratings or improper use may result in device damage and possible electrical arcing and flame.
- A PPTC device is not a fuse - it is a nonlinear thermistor that limits current. Under a fault condition all PPTC devices go into a high-resistance state but do not open circuit, so hazardous voltage may be present at PPTC locations.
- The devices are intended for protection against damage caused by occasional overcurrent or overtemperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated.
- In most applications power must be removed and the fault condition cleared in order to reset a PPTC device; however under certain unusual conditions, a PPTC device may automatically reset. PPTC devices should not be used in an application where an automatic reset could create a safety hazard, such as garbage disposals and blenders. Appropriate qualification testing should be performed.
- It is the responsibility of the user to determine the need for back-up or failsafe protection to prevent damage that may occur in the event of abnormal function or failure of the PPTC device.
- Operation in circuits with a large inductance can generate a circuit voltage (Ldi/dt) above the rated voltage of a PPTC device. This product should not be used in an application where the maximum interrupt voltage or maximum interrupt current can be exceeded by inductive spikes.
- Devices are not recommended for reflow soldering.
- Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal, or mechanical procedures for electronic components.
- *PPTC devices are not recommended for installation in applications where the device is constrained such that its PTC properties are inhibited, for example in rigid potting materials or in rigid housings, which lack adequate clearance to accommodate device expansion.
- *Contamination of the PPTC material with certain silicone-based oils or some aggressive solvents can adversely impact the performance of the devices.

*Does not apply for LVB devices.

POLYSWITCH RESETTABLE DEVICES
Automotive Devices

We have provided PPTC resettable devices for the automotive industry for over 25 years. With the advent of TS16949 and our continued involvement in the automotive industry, TE Circuit Protection developed automotive-specific versions of our PolySwitch PPTC devices (the nanoASMDC, microASMD, miniASMDC, AHS, ASMD, AHRF, AHEF, AGRF and BD families). These products are qualified and sold under the PS400 specification which is derived from AEC-Q200, the standard for electronic components used in the automotive industry. The key difference between these product families and other protection devices in our circuit protection product portfolio is the qualification process that is followed that includes a series of rigorous tests related to the automotive environment. As a result, they are characterized by specific additional values determined following automotive-related testing.



BENEFITS

- Expertise from the world's leading resettable overcurrent protection manufacturer
- High-quality products from the world's largest passive component manufacturer
- Worldwide team dedicated to support automotive applications
- Wide range of dedicated automotive surface-mount and radial-leaded resettable overcurrent devices
- High-performance transient voltage protection devices

FEATURES

- RoHS compliant
- Overcurrent and overvoltage circuit protection devices
- Resettable and single-use overcurrent devices
- Wide range of form factor and termination methods
- Products meet applicable automotive industry standards
- Devices compatible with high-volume electronics assembly

APPLICATIONS

- Motor and motor circuit protection including power door-locks, mirrors, lumbar pumps, seats, sunroofs and windows
- Electronic Control Unit (ECU) I/O protection
- Heating, Ventilation and Cooling (HVAC) motor and I/O protection
- Telematics, infotainment and navigations systems
- Liquid Crystal Display (LCD) back-light heaters
- Power and cigarette lighter outlets, plugs and adapter/chargers
- Powered networks and buses
- Air-flow detection and overcurrent protection in HVAC and cooling fan systems
- Stall detection in express window and sunroof circuits
- Resettable overcurrent protection for power distribution, electrical centers and junction boxes
- Wire downsizing
- Motor electromagnetic interference (EMI) suppression
- Electrostatic discharge (ESD) damage protection
- Load dump and other transient voltage protection

Notes:
I_H : Hold current: maximum current device will pass without interruption in 25°C, unless otherwise specified (20°C for ASMD).
I_T : Trip current: minimum current that will switch the device from low-resistance to high-resistance in 25°C still air, unless otherwise specified.
V_{MAX} : Maximum voltage device can withstand without damage at rated current.
I_{MAX} : Maximum fault current device can withstand without damage at rated voltage.
P_D : Power dissipated from device when in the tripped state in 25°C still air, unless otherwise specified.
R_{MIN} : Minimum resistance of device as supplied at 25°C, unless otherwise specified.
R_{1MAX} : Maximum resistance of device when measured one hour post reflow (surface-mount device) or one hour post trip (radial-leaded device) at 25°C unless otherwise specified.
R_{aMAX} : Maximum functional resistance of device after being subjected to the stresses described in PS400 at 25°C, unless otherwise specified.
R_{aMIN} : Minimum functional resistance of device after being subjected to the stresses described in PS400 at 25°C, unless otherwise specified.

Table A5 — Physical Characteristics and Environmental Specifications

AGRF		
Physical Characteristics		
Lead Material	AGRF400 to AGRF1100	: Tin-plated Copper, 0.52mm² (20AWG) ø 0.8 mm/0.032in
	AGRF1200 to AGRF1400	: Tin-plated Copper, 0.82mm² (18AWG) ø 1.0mm/0.040in
Soldering Characteristics	Solderability per ANSI/J-STD-002 Category 3	
Solder Heat Withstand	AGRF400	: per IEC68-2-20 Test Tb, Method 1A, Condition A: Can Withstand 5 s at 260°C ± 5°C
	AGRF500-AGRF1400	: per IEC68-2-20 Test Tb, Method 1A, Condition B: Can Withstand 10 s at 260°C ± 5°C
Insulating Material	Cured, Flame-retardant Epoxy Polymer; Meets UL 94V-0	
Operation Temperature	-40°C~85°C	

Note: See PS400 for other physical characteristics.
Devices are not intended to be placed through a reflow process.

Environmental Specifications

Test	Conditions	Resistance Change
Passive Aging	70°C, 1000 hrs	±5%
	85°C, 1000 hrs	±5%
Humidity Aging	85°C, 85% RH, 1000 hrs	±5%
Thermal Shock	85°C, -40°C (10 Times)	±5%
Solvent Resistance	MIL-STD-202, Method 215F	No Change

Note: See PS400 for other environmental specifications.

Table A5 — Physical Characteristics and Environmental Specifications (Cont'd)

AHRF

Physical Characteristics

Lead material	AHRF050 to AHRF200 : Tin-plated Copper-clad Steel, 0.205mm² (24 AWG), ø 0.51mm/0.020in
	AHRF300 to AHRF1100 : Tin-plated Copper 0.52mm² (20 AWG), ø 0.81mm/0.032in
	AHRF1300 to AHRF1500: Tin-plated Copper 0.82mm² (18 AWG), ø 1.0mm/0.04in
Soldering Characteristics	Solderability per ANSI/J-STD 002 Category 3
Solder Heat Withstand	Per IEC 68-2-20, Test Tb, Method 1A, Condition B; Can Withstand 10 s at 260°C ± 5°C
Insulating Material	Cured, Flame-retardant Epoxy Polymer; Meets UL 94V-0 Requirements
Operation Temperature	-40°C~125°C

Note: See PS400 for other physical characteristics.
Devices are not intended to be placed through a reflow process.

Environmental Specifications

Test	Conditions	Resistance Change
Passive Aging	70°C, 1000 hrs	±5%
	85°C, 1000 hrs	±5%
Humidity Aging	85°C, 85% RH, 1000 hrs	±5%
Thermal Shock	125°C, -40°C (10 Times)	±5%
Solvent Resistance	MIL-STD-202, Method 215F	No Change

Note: See PS400 for other environmental specifications.

AHEF

Physical Characteristics

Lead Material	AHEF050 to AHEF100: Tin-plated Copper-clad Steel, 0.205mm² (24 AWG), ø 0.51mm/0.020in.
	AHEF300 to AHEF750: Tin-plated Copper 0.52mm² (20 AWG), ø 0.81mm/0.032in
	AHEF1000: Tin-plated Copper 0.82mm² (18 AWG), ø 1.0mm/0.04in
Soldering Characteristics	Solderability per ANSI/J-STD 002 Category 3
Solder Heat Withstand	Per IEC 68-2-20, Test Tb, Method 1A, Condition B; Can Withstand 10 s at 260°C ± 5°C
Insulating Material	Cured, Flame-retardant Epoxy Polymer; Meets UL 94V-0 Requirements
Operation Temperature	-40°C~125°C

Note: See PS400 for other physical characteristics.
Devices are not intended to be placed through a reflow process.

Environmental Specifications

Test	Conditions	Resistance Change
Passive Aging	70°C, 1000 hrs	±5%
	85°C, 1000 hrs	±5%
Humidity Aging	85°C, 85% RH, 1000 hrs	±5%
Thermal Shock	125°C, -40°C (10 Times)	±5%
Solvent Resistance	MIL-STD-202, Method 215F	No Change

Note: See PS400 for other environmental specifications.

Table A5 — Physical Characteristics and Environmental Specifications (Cont'd)

AHS

Physical Characteristics

Lead Material	Tin-plated Brass to MIL-T-10727B
Soldering Characteristics	Solderability per ANSI-J-STD-002 Category 1
Solder Heat Withstand	Per IEC-STD 68-2-20, Test Tb, Section 5, Method 1A
Flammability	Per IEC 695-2-2 Needle Flame Test for 20 s
Operation Temperature	-40°C~125°C

Note: See PS400 for other physical characteristics.

Environmental Specifications

Test	Conditions	Resistance Change
Passive Aging	70°C, 1000 hrs	±3% Typical
	85°C, 1000 hrs	±5% Typical
Humidity Aging	85°C, 85% RH, 1000 hrs	±1.2% Typical
Thermal Shock	125°C, -40°C (20 Times)	-33% Typical
Solvent Resistance	Freon	No Change
	Trichloroethane	No Change
	Hydrocarbons	No Change

Note: See PS400 for other environmental specifications.

ASMD

Physical Characteristics

Terminal Pad Material	98%+ Tin-plated Brass
Soldering Characteristics	Solderability per ANSI-J-STD-002 Category 1
Solder Heat Withstand	Per IEC-STD 68-2-20, Test Tb, Section 5, Method 1A
Flammability Resistance	Per IEC 695-2-2 Needle Flame Test for 20 s
Recommended Storage Conditions	40°C max, 70% RH max; Devices May Not Meet Specified Ratings if Storage Conditions are Exceeded
Operation Temperature	-40°C~85°C

Note: See PS400 for other physical characteristics.

Environmental Specifications

Test	Conditions	Resistance Change
Passive Aging	60°C, 1000 hrs	±3% Typical
	85°C, 1000 hrs	±5% Typical
Humidity Aging	85°C, 85% RH, 100 hrs	±1.2% Typical
Thermal Shock	85°C, -40°C (20 Times)	-33% Typical
	125°C, -55°C (10 Times)	-33% Typical
Solvent Resistance	Freon	No Change
	Trichloroethane	No Change
	Hydrocarbons	No Change

Note: See PS400 for other environmental specifications.

Table A5 — Physical Characteristics and Environmental Specifications (Cont'd)

nanoASMDC/microASMD/miniASMDC

Physical Characteristics

Terminal Pad Material	100% Matte Tin with Nickel Underplate
Soldering Characteristics	Solderability per ANSI-J-STD-002 Category 3
Solder Heat Withstand	Per IEC-STD 68-2-20, Test Tb, Section 5, Method 1A
Flammability Resistance	Per IEC 695-2-2 Needle Flame Test for 20 s
Recommended Storage Conditions	40°C max, 70% RH max; Devices May Not Meet Specified Ratings if Storage Conditions are Exceeded
Operation Temperature	-40°C~85°C

Note: See PS400 for other physical characteristics.

Environmental Specifications

Test	Conditions	Resistance Change
Passive Aging	60°C, 1000 hrs	±3% Typical
	85°C, 1000 hrs	±5% Typical
Humidity Aging	85°C, 85% RH, 100 hrs	±1.2% Typical
Thermal Shock	85°C, -40°C (20 Times)	-33% Typical
	125°C, -55°C (10 Times)	-33% Typical
Solvent Resistance	Freon	No Change
	Trichloroethane	No Change
	Hydrocarbons	No Change

Note: See PS400 for other environmental specifications.

BD

Physical Characteristics

Lead Material	Brass H65, Thickness: 0.8mm, Tin Plating Thickness: 5μm
Soldering Characteristics	NA
Solder Heat Withstand	NA
Insulating Material	Colored PBT, Meets UL94V-0 Requirements
Operation Temperature	-40°C~125°C

Note: See PS400 for other physical characteristics.

Environmental Specifications

Test	Conditions	Resistance Change
Passive Aging	85°C, 1000 hrs	±5%
Humidity Aging	85°C, 85% RH, 1000 hrs	±5%
	85°C, 85% RH (with 10% I_{HOLD}), 500 hrs	±5%
Thermal Shock	85°C to -40°C (5 Times)	Meet SCD
Solvent Resistance	MIL-STD-202, Method 215F	No Change

Note: See PS400 for other environmental specifications.

Table A7 — Tape and Reel Specifications for AGRF/AHRF/AHEF Devices

AGRF, AHRF and AHEF devices are available in tape and reel packaging per EIA468-B/IEC286-2 and EIA 481-2 standards. See Figures A28 and A29 for details.

Description	EIA Mark	Dimension (mm)	Tolerance
Carrier Tape Width	W	18.0	-0.5/+1.0
Hold Down Tape Width	W_4	11.0	Minimum
Top Distance between Tape Edges	W_6	3.0	Maximum
Sprocket Hole Position	W_5	9.0	-0.5/+0.75
Sprocket Hole Diameter	D_0	4.0	±0.2
Abscissa to Plane (Straight Lead) (AHEF300 to AHEF1000)	H	20.3	±0.5
Abscissa to Plane (Kinked Lead) (AGRF400 to AGRF1400, AHRF050 to AHRF1500, AHEF050 to AHEF100)	H_0	16.0	±0.5
Abscissa to Top (AGRF400 to AGRF600, AHRF050 to AHRF450, AHEF050 to AHEF300)	H_1	32.2	Maximum
Abscissa to Top (AGRF700 to AGRF1400, AHRF550 to AHRF1500*, AHEF500 to AHEF1000)	H_1	45.0	Maximum
Overall Width with Lead Protrusion (AGRF400 to AGRF600 & AHRF050 to AHRF450, AHEF050 to AHEF300)	C_1	43.2	Maximum
Overall Width with Lead Protrusion (AGRF700 to AGRF1400, AHRF550 to AHRF1500, AHEF500 to AHEF1000)	C_1	55.0	Maximum
Overall Width without Lead Protrusion (AGRF400 to AGRF600, AHRF050 to AHRF450, AHEF050 to AHEF300)	C_2	42.5	Maximum
Overall Width without Lead Protrusion (AGRF700 to AGRF1400, AHRF550 to AHRF1500, AHEF500 to AHEF1000)	C_2	54.0	Maximum
Lead Protrusion	L_1	1.0	Maximum
Protrusion of Cut-out	L	11.0	Maximum
Protrusion Beyond Hold-Down Tape	l_2	Not specified	—
Sprocket Hole Pitch	P_0	12.7	± 0.3
Device Pitch (AGRF400 to AGRF700, AHRF050 to AHRF600, AHEF050 to AHEF300)	—	12.7	± 0.3
Device Pitch (AGRF800 to AGRF1400, AHRF650 to AHRF1500, AHEF500 to AHEF1000)	—	25.4	± 0.6
Pitch Tolerance	—	20 consec.	± 0.1
Tape Thickness	t	0.9	Maximum
Overall Tape and Lead Thickness (AGRF400 to AGRF1100, AHRF050 to AHRF1100*, AHEF050 to AHEF750)	t_1	2.0	Maximum
Overall Tape and Lead Thickness (AGRF1200 to AGRF1400, AHRF1300 to AHRF1500*, AHEF1000)	t_1	2.3	Maximum
Splice Sprocket Hole Alignment	—	0	± 0.3
Body Lateral Deviation	Δh	0	± 1.0
Body Tape Plane Deviation	Δp	0	± 1.3
Ordinate to Adjacent Component Lead (AGRF400 to AGRF1100, AHRF050 to AHRF900, AHEF050 to AHEF500	P_1	3.81	± 0.7
Ordinate to Adjacent Component Lead (AGRF1200 to AGRF1400, AHRF1000 to AHRF1500, AHEF750 to AHEF1000)	P_1	7.62	± 0.7
Lead Spacing (AGRF400 to AGRF1100, AHRF050 to AHRF900*, AHEF050 to AHEF500)	F	5.05	± 0.75
Lead Spacing (AGRF1200 to AGRF1400, AHRF1000 to AHRF1500*, AHEF750 to AHEF1000)	F	10.15	± 0.75
Reel Width (AGRF400 to AGRF600 & AHRF050 to AHRF450, AHEF050 to AHEF300)	w_2	56.0	Maximum
Reel Width (AGRF700 to AGRF1400, AHRF550 to AHRF1500*, AHEF500 to AHEF1000)	w_2	63.5	Maximum
Reel Diameter	a	370.0	Maximum
Space between Flanges* (AHEF050 to AHEF300)	w_1	48.0	Maximum
Space between Flanges* (AHEF500 to AHEF1000)	w_1	55.0	Maximum
Arbor Hold Diameter	c	26.0	±12.0
Core Diameter*	n	91.0	Maximum
Box	—	64/372/362	Maximum
Consecutive Missing Places	—	None	—
Empty Places per Reel	—	0.1%	Maximum

* Differs from EIA specification.

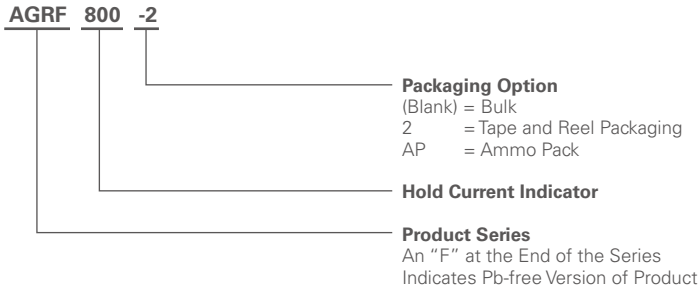
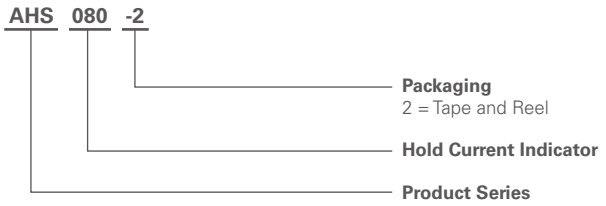
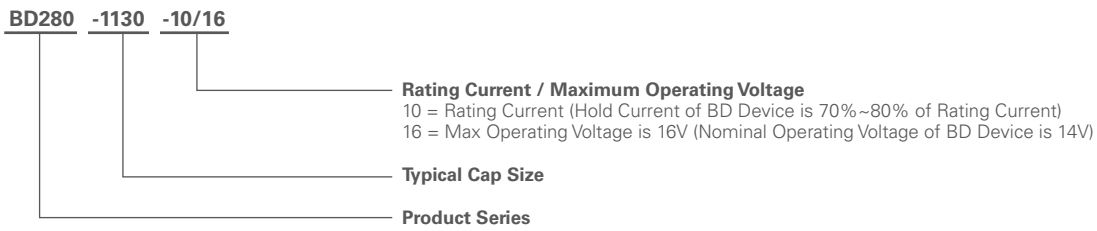
Part Numbering System





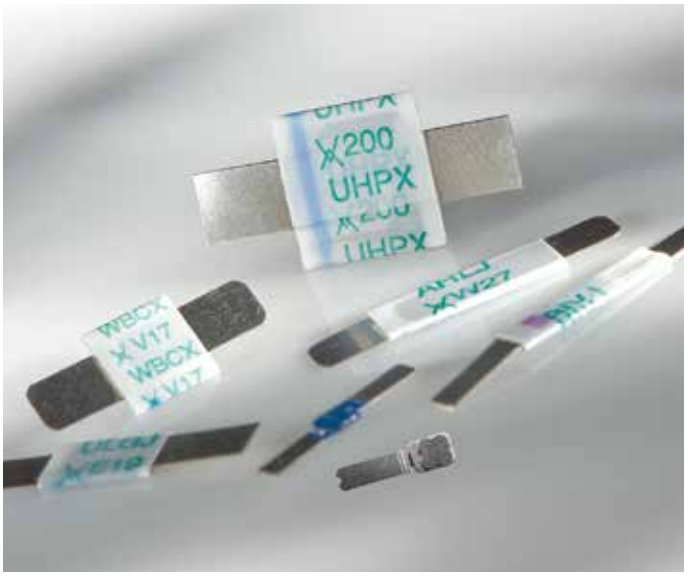


⚠ Warning :

- Users should independently evaluate the suitability of and test each product selected for their own application.
- Operation beyond the maximum ratings or improper use may result in device damage and possible electrical arcing and flame.
- These devices are intended for protection against damage caused by occasional overcurrent or overtemperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated.
- Contamination of the PPTC material with certain silicone-based oils or some aggressive solvents can adversely impact the performance of the devices.
- Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal, and mechanical procedures for electronic components.
- PPTC devices are not recommended for installation in applications where the device is constrained such that its PTC properties are inhibited, for example in rigid potting materials or in rigid housings, which lack adequate clearance to accommodate device expansion.
- Operation in circuits with a large inductance can generate a circuit voltage (Ldi/dt) above the rated voltage of the device.

POLYSWITCH RESETTABLE DEVICES
Strap Battery Devices

TE Circuit Protection, a pioneer of polymeric positive temperature coefficient (PPTC) resettable devices, offers several material platforms to help protect battery applications. Each of these material platforms offers different performance characteristics that allow the engineer greater design flexibility. PolySwitch devices for battery protection include SRP, LR4, VTP, VLP, VLR, MXP, MGP and RSD series, disc and special application strap devices.



BENEFITS

- Many material platforms and device form factors help provide engineers more design flexibility
- Compatible with high-volume electronics assembly
- Assists in meeting regulatory requirements
- Low-resistance devices increase battery operating time

FEATURES

- RoHS compliant
- Lead-free versions of all devices are available
- Broad range of resettable devices available
- Current ratings from 1.1A to 13A
- Voltage ratings from 6V to 30V
- Agency recognition: UL, CSA, TÜV
- Fast time-to-trip
- Low resistance

APPLICATIONS

- Mobile phone and smart phone battery packs
- Tablet PC battery packs
- Mobile radio battery packs
- Computer battery packs
- Digital camera battery packs
- Portable media player battery packs
- Power tools (charge line)

Application Selection Guide

The guide below lists PolySwitch strap battery devices which are typically used in applications.
The following pages contain the specifications for the part numbers recommended below.
Once a device is selected, the user should evaluate and test each product for its intended application.

Protection Application	Additional Comments	PolySwitch Resettable Devices — Key Device Selection Criteria		
		Installation Method	Lowest Resistance	Lowest Thermal Cut-off
Mobile Phone Battery Packs	Li-ion	Surface-mount	Refer to Surface-mount Section of this Catalog

* Product electrical characteristics determined at 25°C.

Notes

I_H : Hold current: maximum current device will pass without interruption in 20°C still air unless otherwise specified.
I_T : Trip current: minimum current that will switch the device from low-resistance to high-resistance in 20°C still air unless otherwise specified.
V_{MAX} : Maximum voltage device can withstand without damage at rated current.
I_{MAX} : Maximum fault current device can withstand without damage at rated voltage.
P_D : Power dissipated from device when in the tripped state in 20°C still air unless otherwise specified.
R_{MIN} : Minimum resistance of device as supplied at 20°C unless otherwise specified.
R_{MAX} : Maximum resistance of device as supplied at 20°C unless otherwise specified.
R_{1MAX} : Maximum resistance, measured at 20°C unless otherwise specified, of device one hour after being tripped the first time.

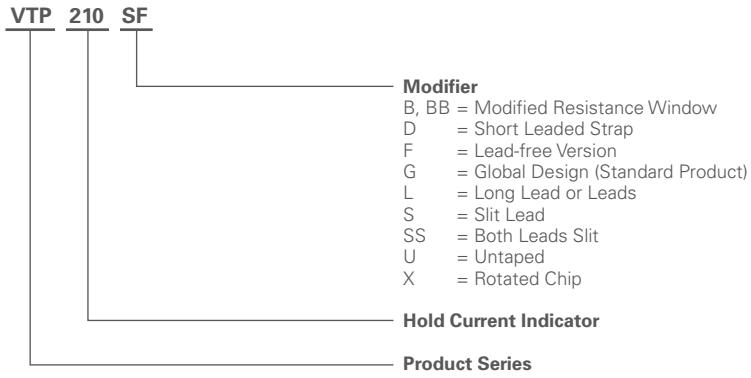
Installation Guidelines for the Strap Family

- PPTC devices operate by thermal expansion of the conductive polymer. If devices are placed under pressure or installed in spaces that would prevent thermal expansion, they may not properly protect against damage caused by fault conditions. Designs must be selected in such a manner that adequate space is maintained over the life of the product.
- Twisting, bending, or placing the PPTC device in tension will decrease the ability of the device to protect against damage caused by electrical faults. No residual force should remain on device after installation. Mechanical damage to the PPTC device may affect device performance and should be avoided.
- Chemical contamination of PPTC devices should be avoided. Certain greases, solvents, hydraulic fluids, fuels, industrial cleaning agents, volatile components of adhesives, silicones, and electrolytes can have an adverse effect on device performance.
- PPTC strap devices are intended to be resistance welded to battery cells or to pack interconnect straps, yet some precautions must be taken when doing so. In order for the PPTC device to exhibit its specified performance, weld placement should be a minimum of 2mm from the edge of the PPTC device, weld splatter must not touch the PPTC device, and welding conditions must not heat the PPTC device above its maximum operating temperature.
- PPTC strap devices are not intended for applications where reflow onto flex circuits or rigid circuit boards is required.
- The polyester tape on PPTC strap devices is intended for marking and identification purposes only, not for electrical insulation.
- The coating on MXP and MGP devices is intended to prevent oxidization/aging of the devices. Damaging the coating or causing the coating to delaminate can have negative effects on device performance and should be avoided.
- MXP and MGP devices have a small PPTC chip size and therefore have weaker peel strength between the polymer and Ni-foil of the chip. Excessive mechanical force to the device may cause delamination of Ni-foil from the polymer.

Part Numbering System

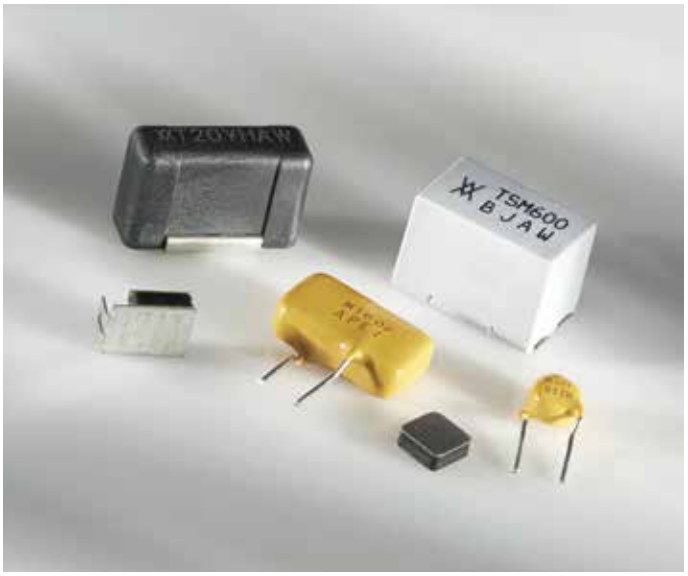


⚠ Warning :

- Users should independently evaluate the suitability of and test each product selected for their own application.
- Operation beyond the maximum ratings or improper use may result in device damage and possible electrical arcing and flame.
- These devices are intended for protection against damage caused by occasional overcurrent or overtemperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated.
- Contamination of the PPTC material with certain silicone-based oils or some aggressive solvents can adversely impact the performance of the devices.
- Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal, and mechanical procedures for electronic components.
- PPTC devices are not recommended for installation in applications where the device is constrained such that its PTC properties are inhibited, for example in rigid potting materials or in rigid housings, which lack adequate clearance to accommodate device expansion.
- Operation in circuits with a large inductance can generate a circuit voltage (Ldi/dt) above the rated voltage of the device.

POLYSWITCH RESETTABLE DEVICES
Telecommunications and Networking Devices

The PolySwitch families of telecommunications and networking devices help meet the growing demand for resettable overcurrent protection. These product families help provide protection against damage caused by power cross and power induction surges as defined in ITU, Telcordia GR1089 and UL60950. Available in chip, surface-mount and radial-leaded configurations, TE's PolySwitch devices help improve the reliability of customer premise and network equipment worldwide.



BENEFITS

- Choice of many product options helps engineers by improving design flexibility
- Compatible with high-volume electronics assembly
- Assist in meeting regulatory equipment requirements
- Help improve line balance
- Applicable for legacy POTS and modern digital communications equipment

FEATURES

- RoHS compliant
- Resettable overcurrent protection
- Surface-mount, radial-leaded and chip form factors
- Fast time-to-trip
- Agency recognition: UL, CSA, TÜV
- Resistance-sorted and matched devices available
- Low parasitic capacitance/flat impedance with frequency

APPLICATIONS

- Modems
- Phone sets
- Fax machines
- Phone wall outlets
- Alarm systems
- PBX systems
- MDF modules
- Analog and digital line cards
- T1/E1 equipment
- xDSL modems and splitters
- Powered ethernet systems
- VoIP (Voice over Internet Protocol) equipment
- LAN, WAN equipment
- Customer premise equipment
- Access network hardware

Application Guide for Telecommunications and Networking Devices*

To use this guide, follow the steps below:

1. Select your equipment type from the guide below.
2. Select the type of protection depending on the agency and regional specifications in the second column.
3. Select the form factor for your application.
4. Use the Agency Specification/ PolySwitch Device Selection Guide on the next page to select a specific part number for each application based on the agency requirements.
5. Parts with fast time-to-trip or low resistance are available. Please consult a TE Circuit Protection representative.

Agency Specification/Selection Guide

Use the guide below to select the PolySwitch devices which are typically used in your application. The following pages contain the specifications for the part numbers recommended below. PolySwitch devices assist telecommunication equipment in meeting the applicable protection requirements of these industry specifications. Refer to individual agency specifications for test procedures and circuit schematics. Users should independently evaluate the suitability of and test each product for their application.

Voltage Ratings for Telecommunications and Networking Devices

For circuit protection telecommunications devices there are two applicable voltage ratings. These are V_{MAX} Operating and V_{MAX} Interrupt. To help understand the nature of these two different voltage ratings, the following definitions are provided:

V_{MAX} Operating: For telecommunications devices, this is the voltage used to obtain component recognition under UL1434. Most circuit protection devices are certified at 60V but can withstand higher V_{MAX} Interrupt conditions. See Table T3 for its V_{MAX} Operating.

***V_{MAX} Interrupt:** Under specified conditions, this is the highest voltage that can be applied to the device at the maximum current. Devices may trip safely under higher power level cross conditions, as listed above, to assist equipment in meeting the appropriate industry conditions.

* 250V_{AC} interrupt products may help equipment pass ITU K.20, K.21 and K.45 recommendations and Telcordia GR-1089 Port Type 2 and 4 requirements.
** Applies to all products which share the same prefix.
† 600V_{AC} interrupt products may help equipment pass UL60950, TIA-968-A and GR1089 Port Type 1, 3 and 5 requirements.
‡ Product is not currently available in a resistance matched or sorted option.

Notes:
I_H : Hold current: maximum current device will pass without interruption in 20°C still air.
I_T : Trip current: minimum current that will switch the device from low resistance to high resistance in 20°C still air.
V_{MAX} Operating: Maximum continuous voltage device can withstand without damage at rated current. This voltage is used for component recognition under UL1434.
V_{MAX} Interrupt : Maximum voltage that can be safely placed across a device in its tripped state. Devices may trip safely under higher level power cross conditions to assist equipment in meeting the appropriate ITU, UL60950 or GR1089 industry requirements.
I_{MAX} Interrupt : Maximum fault current device can withstand without damage at rated operating voltage. This current is used for component recognition under UL1434. Devices may trip safely under higher level power cross conditions to assist equipment in meeting the appropriate ITU, UL60950 or GR1089 industry requirements.
P_D : Power dissipated from device when in the tripped state in 20°C still air.
R_{MIN} : Minimum resistance of device as supplied at 20°C unless otherwise specified.
R_{MAX} : Maximum resistance of device as supplied at 20°C unless otherwise specified.
R_{1MAX} : Maximum resistance measured one hour post-trip or post-reflow at 20°C.

* 250V_{AC} interrupt products may help equipment pass ITU K.20, K.21 and K.45 recommendations and Telcordia GR-1089 Port Type 2 and 4 requirements.
† 600V_{AC} interrupt products may help equipment pass UL60950, TIA-968-A and GR1089 Port Type 1, 3 and 5 requirements.
‡ Product is not currently available in a resistance matched or sorted option.
** R_{1MAX} measured 1 hour post-trip or 24 hours post-reflow at 20°C.

Table T5 — Physical Characteristics and Environmental Specifications

Operating temperature range for all listed products is -40°C to 85°C, except for TRF250-080T and TRF250-184 (0°C to 85°C)

TCF250*

Physical Characteristics

Terminal Material	Nickel-plated Copper Foil

Environmental Specifications

Test	Conditions
Passive Aging	60°C, 1000 hrs
	85°C, 1000 hrs
Humidity Aging	85°C, 85% RH, 1000 hrs
Thermal Shock	125°C, -55°C (10 Times)
Solvent Resistance	MIL-STD-202, Method 215F

Note: Storage conditions: 40°C (max), 70% RH (max), devices should remain in original sealed bag prior to use. Devices may not meet specified values if these storage conditions are exceeded.

TRF250*

Physical Characteristics

Lead Material	Tin-plated Copper, 22AWG
Insulating Material	Cured Epoxy Polymer
Flammability	Per IEC 695-2-2 Needle Flame Test for 20 s
Soldering Characteristics	ANSI/J-STD-002, Category 3
Solder Heat Withstand	IEC-STD 68-2-20, Test Tb, Section 5 Method 1A, Condition B: Can Withstand 10s at 260°C±5°C

Note: Devices are not intended to be placed through a reflow process.

Environmental Specifications

Test	Conditions
Passive Aging	60°C, 1000 hrs
	85°C, 1000 hrs
Humidity Aging	85°C, 85% RH, 1000 hrs
Thermal Shock	125°C, -55°C (10 Times)
Solvent Resistance	MIL-STD-202, Method 215F

Note: Storage conditions: 40°C (max), 70% RH (max), devices should remain in original sealed bag prior to use. Devices may not meet specified values if these storage conditions are exceeded.

TS250/TSV250/TSL250*

Physical Characteristics

Terminal Material	Tin-plated Brass, Nickel Under-plating
Soldering Characteristics	EIC 60068-2-58

Environmental Specifications

Test	Conditions
Passive Aging	60°C, 1000 hrs
	85°C, 1000 hrs
Humidity Aging	85°C, 85% RH, 500 hrs
Thermal Shock	125°C, -55°C (10 Times)
Solvent Resistance	MIL-STD-202, Method 215F

Note: Storage conditions: 40°C (max), 70% RH (max), devices should remain in original sealed bag prior to use. Devices may not meet specified values if these storage conditions are exceeded.

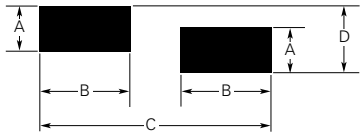

Figure T19

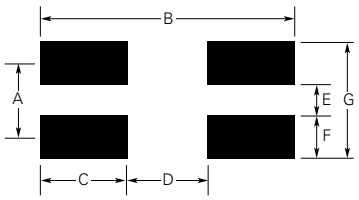
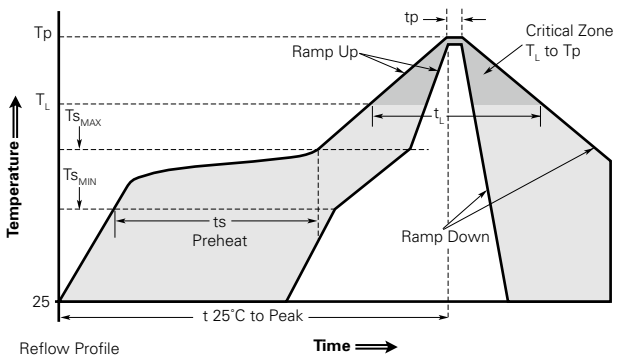


Solder Reflow and Rework Recommendations for PolySwitch Telecommunications Surface-Mount Devices

Profile Feature	Pb-Free Assembly
Average ramp up rate (Ts_{MAX} to Tp)	3°C/s max
Preheat	
• Temperature min (Ts_{MIN})	150°C
• Temperature max (Ts_{MAX})	200°C
• Time (ts_{MIN} to ts_{MAX})	60-180 s
Time maintained above:	
• Temperature (T_L)	217°C
• Time (t_L)	60-150 s
Peak/Classification temperature (Tp)	260°C
Time within 5°C of actual peak temperature	
Time (tp)	20-40 s
Ramp down rate	6°C/s max
Time 25°C to peak temperature	8min max

Figure T20



Note: All temperatures refer to topside of the package, measured on the package body surface.

Solder Reflow

- Recommended reflow method: IR, vapor phase oven, hot air oven.
- Surface-mount devices are not intended to be wave soldered to the bottom side of the board.
- Recommended maximum paste thickness of 0.25mm (0.010in).
- Devices can be cleaned using standard industry methods and solvents.

Rework

- If a device is removed from the board, it should be discarded and replaced with a new device.

Wave Soldering and Rework Recommendations for PolySwitch Telecommunications Radial-Leaded Devices

Recommended Wave Soldering

- Soldering temperature profile
  Temperature characteristic at component terminal with dual wave soldering

Rework

- If a device is removed from the board, it should be discarded and replaced with a new device

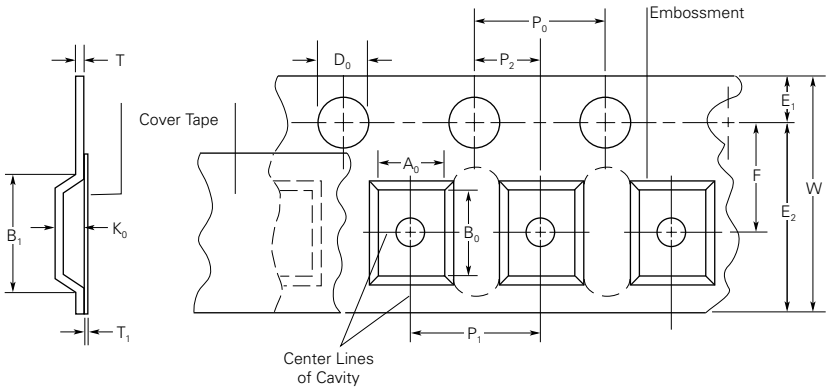

Figure T25 — EIA Referenced Reel Dimensions for PolySwitch Telecommunications and Networking Devices

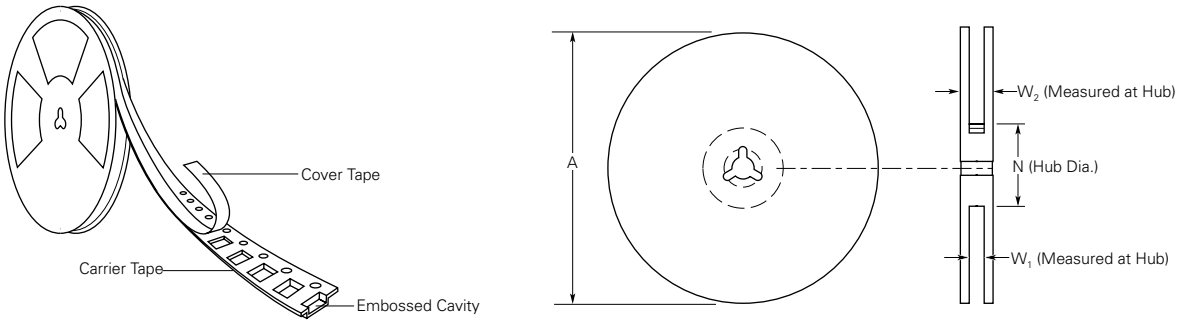


PolySwitch Telecommunications and Networking Resistance-Sorted and Resistance-Matched Devices

Most TCF, TRF and TS devices are available in resistance-sorted and/or resistance-matched versions.

Resistance-sorted Devices

Resistance-sorted devices (part number suffix "Rx", where x = 1, 2, A, B, C, F, etc.) are supplied with resistance values that are within specified segments of the device's full range of resistance.

Feature
- Narrow resistance range.

Benefits
- Can help provide greater flexibility for design engineers.
- Lower resistance devices can help provide increased loop length on line card designs.
- Higher resistance devices may help provide greater protection by offering faster time-to-trip.

Resistance-matched Devices

Resistance-matched devices are supplied such that all parts in one particular package (or reel) are within 0.5Ω of each other (1.0Ω for TRF250-080T devices). Individual matched packages are supplied from the full resistance range of the specified device.

Feature
- Tighter resistance balance between any two parts in a package.

Benefits
- Resistance-matched devices may help reduce the tip-ring resistance differential, reducing the possibility of line imbalance.

Part Numbering System for PolySwitch Radial-Leaded Telecommunications and Networking Devices

TRF*250 -120 T -RA -B-0.5 -2

Packaging
2 = Tape and Reel
0.130 = Special Lead Length in Inches
(Blank) = Bulk

B-x.x = Resistance Matched in Bins of x.xΩ (Optional)

Rx = Resistance Range (Optional)

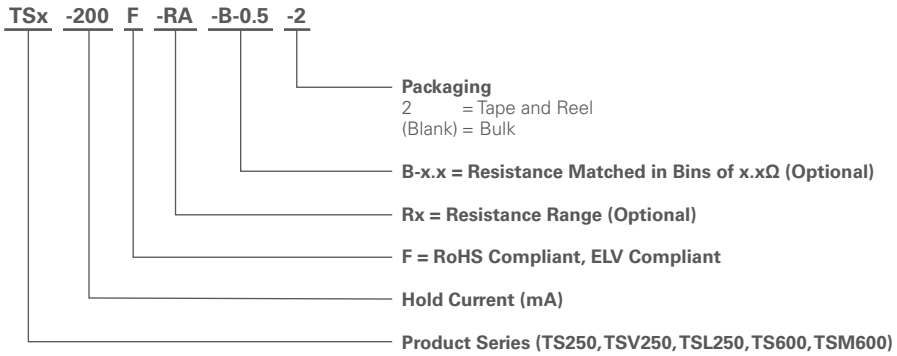
Modifier (Optional)
U = Uncoated
S = Straight Lead
T = Fast Trip Device

Hold Current (mA)

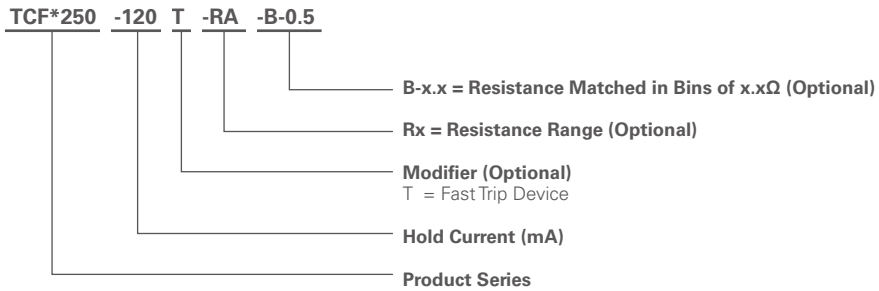
Product Series (TRF250, TRF600)

* F = RoHS compliant, ELV compliant

Part Numbering System for PolySwitch Surface-mount Telecommunications and Networking Devices



Part Numbering System for Chip PolySwitch Telecommunications and Networking Devices



* F = RoHS compliant, ELV compliant

⚠ Warning :

- Users should independently evaluate the suitability of and test each product selected for their own application.
- Operation beyond the maximum ratings or improper use may result in device damage and possible electrical arcing and flame.
- These devices are intended for protection against damage caused by occasional overcurrent or overtemperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated.
- Contamination of the PPTC material with certain silicone-based oils or some aggressive solvents can adversely impact the performance of the devices.
- Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal and mechanical procedures for electronic components.
- PPTC devices are not recommended for installation in applications where the device is constrained such that its PTC properties are inhibited, for example in rigid potting materials or in rigid housings, which lack adequate clearance to accommodate device expansion.
- Operation in circuits with a large inductance can generate a circuit voltage (Ldi/dt) above the rated voltage of the device.

LET'S CONNECT

Our company's long-standing commitment to innovation and engineering excellence helps our customers solve the need for more energy efficiency, always-on communications and ever-increasing productivity. With nearly 75,000 employees, including 7,300 engineers around the global. TE Connectivity makes connections the world relies on to work flawlessly every day.
