

RAFIX FS switching element emergency stop PCB, silver, for THT LED, 1 NC + 1 NO

fields of application

- > Measurement-control-regulation
- > Electrical engineering
- > Mechanical and system engineering
- Signalling systems
- > Vehicle construction
- > Agricultural and forestry machinery
- > Construction machinery
- > Handheld terminals
- > Industrial robots

description

These switching elements have internal plungers and therefore can only be combined with emergency stop and mushroom pushbuttons.

The PCB switching elements are positioned on a PCB shared with other components. These can subsequently be mounted behind the front panel together with the actuators and signal indicators. The switching elements "float" directly underneath the actuators on the PCB behind the front panel and leave plenty of space for other components.

In the center channel of the switching element, there are either light conductors for the use of SMT-LEDs, or 3 mm THT LEDs can be installed for illumination.

PCB mounting depths

- 9.2 mm for RAFIX 22 FS+ and RAFIX 22 FSR
- 15.7 mm for RAFIX 30 FS+:

The NC contacts of these switching elements are forcibly separated according to IEC 60947-5-1.

- > PCB contact block for RAFIX 22 FS+, RAFIX FSR and RAFIX 30 FS
- > Only suitable for emergency stop and mushroom pushbutton
- Silver contacts (= black housing)
- > Mounting: Soldering on printed circuit board
- $ar{}$ Version with light guide for SMT LED, without light guide for THT LED
- > marking:
 - normally closed contacts = red plungers
 - normally open contacts = green plungers
 - N/C and N/O contacts = yellow plungers

(GB) 2. General description and intended use

EMERGENCY STOP control units are electromechanical switching devices designed to protect persons. They are used for instant disconnection to achieve a safe status of machines, vehicles or

other equipment in order to avoid or reduce risks or damage to man and machine. The following standards and regulations apply to their start-up, use and technical inspections, without limitation: - Machinery Directive 2006/42/EC

- Safety standards

Manufacturers and users of machines provided with EMERGENCY STOP control units are respon

and rules complied with.

For the installation and operation of EMERGENCY STOP control devices in line with the intended Pointerinstanation and operation of Enversion 2010 Control control devices in the wall the intended use, the following requirements must be observed and a risk assessment must be performed: - EN ISO 13849-1:2015 - EN ISO 13850:2008 - EN ISO 13849-2:2012 - EN 60204-1/A1:2009

D 2. Allgemeine Beschreibung und bestimmungsgemäße Verwendung

Nor-Halt-Befehlsgeräte sind elektromechanische Schaltgeräte zum Schutz von Personen. Sie dienen der schnellen Abschaltung um Maschinen, Fahrzeuge und Anlagen in einen sicheren Zu-stand zu bringen, um Gefahren und Schäden für Mensch und Maschine zu vermeiden oder zu verrinaern.

Für die Inbetriebnahme, den Einsatz und technischen Überprüfungen gelten im speziellen folgen-de Vorschriften:

Hersteller und Benutzer von Maschinen, an denen Not-Halt-Befehlsgeräte eingesetzt werden, tra-
