Supertex inc.

16-Channel (2 Banks of 8-Channels), High Voltage, Analog Switch With Bleed Resistors

Features

- HVCMOS[®] technology for high performance
- 220V operating conditions
- 22Ω typical output on-resistance
- Integrated bleed resistors on the outputs
- 3.3V and 5.0V CMOS logic compatibility
- Very low quiescent power dissipation (-10µA)
- -45dB min off isolation at 7.5MHz
- Low parasitic capacitance
- Excellent noise immunity
- Flexible operating supply voltages
- 48-lead LQFP package

Applications

- Medical ultrasound imaging
- Non-destructive evaluation

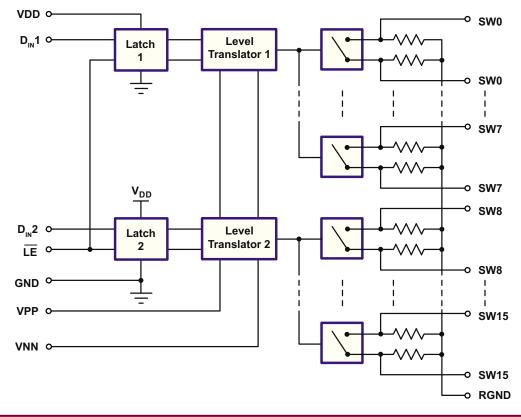

General Description

The Supertex HV2731 is a 220V, 16-channel, high voltage, analog switch integrated circuit (IC) with output bleed resistors (R_{INT}). The output switches are configured as 2 sets of 8 single pole, single throw analog switches. The IC is intended to be used in applications requiring high voltage switching controlled by low voltage control signals, such as ultrasound imaging.

The 2 sets of 8 analog switches are controlled by 2 input logic controls, $D_{IN}1$ and $D_{IN}2$. A logic high on $D_{IN}1$ will turn on switches 0 to 7 and a logic high on $D_{IN}2$ will turn on switches 8 to 15. The bleed resistors help to significantly reduce voltage built up on capacitive loads such as piezoelectric transducers connected to the outputs.

Using HVCMOS[®] technology, this device combines high voltage bilateral DMOS switches and low power CMOS logic to provide efficient control of high voltage analog signals.

Ordering Information

Device	48-Lead LQFP 7.00x7.00mm body 1.60mm height (max) 0.50mm pitch
HV2731	HV2731FG-G
C indicatos poekago is BoUS os	maliant ('Croon')

-G indicates package is RoHS compliant ('Green')

Absolute Maximum Ratings

Parameter	Value
V _{DD} logic supply	-0.5V to +7.0V
V_{PP} - V_{NN} differential supply	225V
V_{PP} positive supply	-0.5V to V _{NN} +225V
V _{NN} negative supply	+0.5V to -225V
Logic input voltage	-0.5V to V_{DD} +0.3V
Analog signal range	$\rm V_{_{NN}}$ to $\rm V_{_{PP}}$
Peak analog signal current/channel	2.5A
Storage temperature	-65°C to 150°C
Power dissipation	1.0W

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.

Recommended Operating Conditions

Sym	Parameter	Value
V _{DD}	Logic power supply voltage	3.0V to 5.5V
V _{PP}	Positive driver supply	+50V to +110V
V _{NN}	Negative high voltage supply	-10V to V _{PP} -220V
V _{IH}	High level input voltage	V_{DD} -1.0V to V_{DD}
V _{IL}	Low-level input voltage	0V to 1.0V
V _{SIG}	Analog signal voltage peak-to-peak	$V_{_{\rm NN}}$ +10V to $V_{_{\rm PP}}$ -10V
T _A	Operating free air temperature	0°C to 70°C

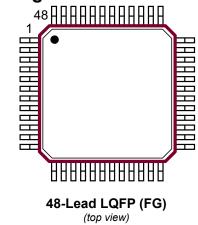

Notes:

1. Power up/down sequence is arbitrary except GND must be powered-up first and powered-down last.

2. V_{SIG} must be $V_{NN} \le V_{SIG} \le V_{PP}$ or floating during power up/down transition.

3. Rise and fall times of power supplies V_{DD} , V_{PP} and V_{NN} should not be less than 1.0msec.

Pin Configuration

Product Marking

Package may or may not include the following marks: Si or () 48-Lead LQFP (FG)
