

Micro Relay A

- Pin assignment according to ISO 7588 part 3
- Customized versions on request
 - 24VDC versions with special contact gap
 - Integrated components (e.g. diode)
 - Customized marking
 - Special covers (e.g. notches, release features)
 - For low noise version refer to Micro Relay Low Noise
 - For high current version refer to High Current Micro Relay

Typical applications

Cross carline up to 30A for example: ABS control, blower fans, cooling fan, door control, door lock, fuel pump, heated front screen, immobilizer, interior lights, seat control, seatbelt pretensioner, sun roof, trunk lock, valves, window lifter, wiper control.

1) Not applicable for polarity reverse loads like power windows.

2) Current and time are compatible with circuit protection by a typical automotive fuse. Relay will make, carry and break the specified current.

3) See Definitions for automotive relays <https://relays.te.com/definitions/> and chapter Diagnostics of Relays in our Application Notes at <https://relays.te.com/appnotes/>

4) At rated voltage and 23°C for a relay coil with suppression resistor. A suppression diode will influence the switching behaviour and reduce the service life.

5) According Weibull

6) NO & NC contacted tested independently

7) Any diode or pn-junction parallel to the coil (internal or external) will significantly decrease the electrical lifetime, especially when used for inductive loads.

8) Cyclic temperature -40°C to 125°C

9) Max. inrush peak-current at 250 ... 350µs

10) Room temperature

11) Cyclic temperature -40°C to 85°C

12) Refers to used material.

13) Valid for NC contacts, NO contact values significantly higher.

14) Values apply 2mm from the end of the terminal. When the force is removed, the terminal must not have moved by more than 0.3mm.
