Programming

Programming of transducer can be done in three ways	1) Programming Via Front LCD & two keys. 2) Programming Via optional RS485(MODBUS) communication port (Device address, Password,communication parameter, Output Type & simulation mode can be programmed). 3) Programming Via Programming port vailable at front of Theta Hz Transducers using (optional) PRKAB601 Adapter.
Programming Via Programming port (COM)	A PC with RS 232 C interface along with the programming cable PRKAB601 and the configuration software are required to program the transducer.

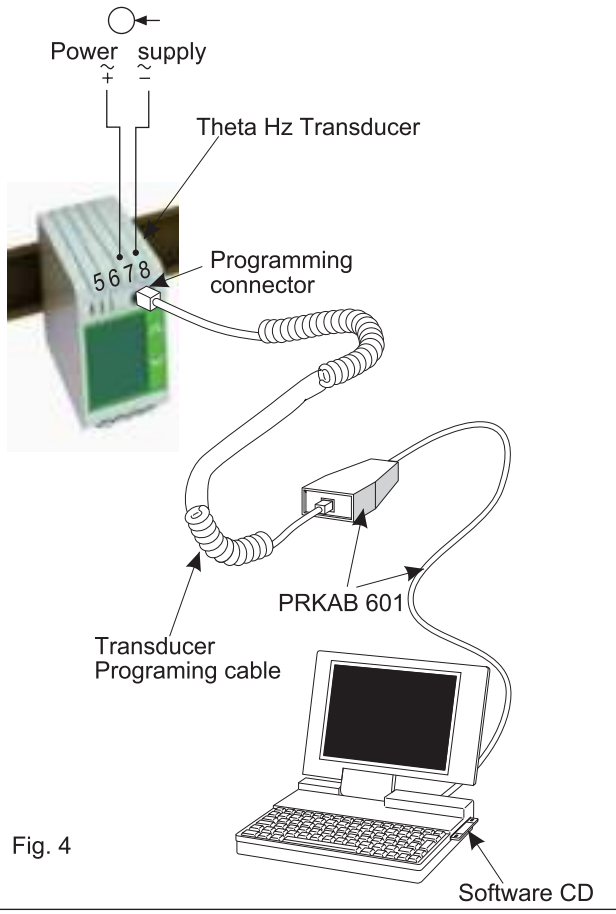

Fig. 4

The connections between	"PC ↔ PRKAB 601↔ Theta Transducer The power supply must be applied to Transducer be fore it can be programmed. The Configuration software is supplied on a CD. The programming cable PRKAB601 adjusts the signal level and provides the electrical insulation between the PC and Theta Transducers.
Configuring Rish Con Transducer	To configure Theta Transducer Input / output one of the three programming methods can be adapted along with mechanical switch setting (DIP switch setting on PCB for output).
DIP Switch Setting for OUTPUT	Type of output (current or voltage signal) has to be set by DIP switch (see Fig.5). For programming of DIP switch the user needs to open the transducer housing & set the DIP switch located on PCB to the desired output type Voltage or Current. Output range changing is not possible with DIP switch setting. Refer below Fig. 5 for DIP switch setting. The four pole DIP switch is located on the PCB in the Theta Transducer

DIP Switch Setting	Type of Output Signal
